THE ROMANCE OF WORDS

By
ERNEST WEEKLEY

"Vous savez le latin, sans doute?"—

"Oui, mais faites comme si je ne le savais pas."

MOLIÈRE, *Le Bourgeois Gentilhomme*, ii. 6.)

Published for

THE BRITISH PUBLISHERS GUILD LIMITED

By John Murray, Albemarle Street, W.1

FIRST EDITION MARCH 1912
REPRINTED JUNE 1912
SECOND EDITION, REVISED AND ENLARGED NOVEMBER 1918 12
THIRD EDITION MAY 1917
FOURTH EDITION JANUARY 1922
REPRINTED FEBRUARY 1925
REPRINTED JANUARY 1927
REPRINTED APRIL 1931
REPRINTED OCTOBER 1934
REPRINTED OCTOBER 1944
FIRST PUBLISHED IN *Guild Books* 1949

PRINTED AND BOUND IN ENGLAND BY
HAZELL WATSON & VINEY LTD
AYLESBURY AND LONDON

PREFACE TO NEW EDITION

THE present age is, as we are almost monotonously informed, mechanically minded; but there still exists a dwindling minority for whom the curiosities of word-lore are as attractive as the marvels of jet propulsion. It is to this élite that the *Romance of Words* makes its modest appeal. Its inception goes back to the days when the author, having emerged from the monosyllabic stage of culture, became infected with an insatiable curiosity about words and began to pester his elders with linguistic conundrums. The elders did their best with the kind of information that was then available, with the result that the artless inquirer believed for many years that *cabal* was an acrostic formed from the initials of Charles II.'s five ministers, and that *beefeater* was corrupted from a non-existent word meaning a waiter at the sideboard.

Since its first appearance, the book has run through several editions, and each reprint has made it possible to add, subtract and modify in accordance with the continual progress of philological research. In this new edition no serious change has been found necessary, and any slight alterations have been almost entirely concerned with details of wording and typography.

Such a book could not have been attempted without the help of that great national work formerly known as the *New English Dictionary*, now the *Oxford English Dictionary*, in the etymological part of which the author had for many years a humble share. But in the 60 years that have elapsed since the first instalment of the Dictionary appeared much work has been done in the field of linguistics and many new mines (not avenues!) of information have been explored. No reputable source of knowledge has been left unconsulted, but the book is not a mere compilation, in its Latin sense of pillage, from other men's work. It is a selection from the fruits of many years' study of ancient and modern languages, both as learner and teacher. It deals especially with the unexpected in etymology, with the strange journeyings and vicissitudes of words, and with "things not generally known," such as the fact that *assegai* occurs in Chaucer, that the *guinea-pig* does not come

PREFACE TO NEW EDITION

from Guinea, that the *hope* of *forlorn hope* is unconnected with any idea of pleasurable expectancy, and that *sentry* is the same word as *sanctuary*.

The author hopes that, in its new form, the book may give to its readers some of the pleasure that its composition and revision have given to himself.

ERNEST WEEKLEY

XIII ETYMOLOGICAL FACT AND FICTION	144
INDEX	161

The following dictionaries are quoted without further reference:

- Palsgrave, French and English (1530)
- Cooper, Latin and English (1573)
- Percyvall, Spanish and English (1591)
- Florio, Italian and English (1598)
- Cotgrave, French and English (1611)
- Torriano, Italian and English (1659)
- Hexham, Dutch and English (1660)
- Ludwig, German and English (1716)

CHAPTER I

OUR VOCABULARY

THE bulk of our literary language is Latin, and consists of words either borrowed directly or taken from "learned" French forms. The everyday vocabulary of the less educated is of Old English, commonly called Anglo-Saxon, origin; and from the same source comes what we may call the machinery of the language, *i.e.*, its inflexions, numerals, pronouns, prepositions and conjunctions. Along with Anglo-Saxon, we find a considerable number of words from the related Norse languages, this element being naturally strongest in the dialects of the north and east of England. The third great element of our working vocabulary is furnished by Old French, *i.e.*, the language naturally developed from the spoken Latin of the Roman soldiers and colonists, generally called Vulgar Latin. To its composite character English owes its unequalled richness in expression. For most ideas we have three separate terms, or groups of terms, which, often starting from the same metaphor, serve to express different shades of meaning. Thus a deed done with malice *prepense* (an old French compound from Lat. *pensare* to weigh) is *deliberate* or *pondered*, both Latin words which mean literally "weighed"; but the four words convey four distinct shades of meaning. The Gk. *sympathy* is Lat. *compassion*, rendered in English by *fellow-feeling*.

Sometimes a native word has been completely supplanted by a loan word, *e.g.*, Anglo-Sax. *here*, army (*cf.* Ger. *heer*), gave way to Old Fr. (*h*)*ost* (p. 125). This in its turn was replaced by *army*, Fr. *armée*, which, like its Spanish doublet *armada*, is really a feminine past participle with some word for host, band, etc., understood. *Here* has survived in *Hereford*, *harbour* (p. 130), *harbinger* (p. 75), etc., and in the verb *harry* (*cf.* Ger. *verheeren*, to harry).

Or a native word may persist in some special sense, *e.g.*, *weed*, a general term for garment in Shakespeare—

"And there the snake throws her enamel'd skin,
Weed wide enough to wrap a fairy in."

(*Midsummer Night's Dream*, ii. 2.)—

survives in "widow's *weeds*." *Chare*, a turn of work—

"the maid that milks
And does the meanest *chares*."

(*Antony and Cleopatra*, iv. 15.)—

has given us *charwoman*, and persists as American *chore*, now definitely adopted in English—

"Sharlee was . . . concluding the post-prandial *chores*."

(H. S. HARRISON, *Queed*, Ch. 17.)

Sake, cognate with Ger. *sache*, thing, cause, and originally meaning a contention at law, has been replaced by *cause*, except in phrases beginning with the preposition *for*. See also *bead* (p. 62). *Unkempt*, uncombed, and *uncouth*, unknown, are fossil remains of obsolete verb forms.

In addition to these main constituents of our language, we have borrowed words, sometimes in considerable numbers, sometimes singly and accidentally, from almost every tongue known to mankind, and every year sees new words added to our vocabulary. The following chapters deal especially with words borrowed from Old French and from the other Romance languages, their origins and journeyings, and the various accidents that have befallen them in English. It is in such words as these that the romance of language is best exemplified, because we can usually trace their history from Latin to modern English, while the earlier history of Anglo-Saxon words is a matter for the philologist.

Words borrowed directly from Latin or Greek lack this intermediate experience, though the study of their original meanings is full of surprises. This, however, is merely a question of opening a Latin or Greek dictionary, if we have not time for the moment's reflexion which would serve the same purpose. Thus, to take a dozen examples at random, to *abominate*¹ is to turn shuddering from the evil *omen*, a *generous* man is a man of "race" (*genus*), an *innuendo* can be conveyed "by nodding," to *insult* is to "jump on," a *legend* is something "to be read," a *manual* is a "hand-book," an *obligation* is essentially "binding," to *relent* is to "go slow," *rivals* are people living by the same "stream"² (*rivus*), a *salary* is an allowance

¹ *Abominable* is regularly spelt *abhorrible* in late Old French and Mid. English, as though meaning "inhuman," Lat. *homo*, *homin-*, a man.

² This etymology is doubted by some authorities.

for "salt" (*sal*), a *supercilious* man is fond of raising his "eyebrows" (*supercilia*), and a *trivial* matter is so commonplace that it can be picked up at the meeting of "three ways" (*trivium*). *Dexterity* implies skill with the "right" hand (*dexter*), while *sinister* preserves the superstition of the ill-omened "left."

It may be remarked here that the number of Latin words used in their unaltered form in everyday English is larger than is generally realized. Besides such phrases as *bona-fide*, *post-mortem*, *viva-voce*, or such abbreviations as A.M., *ante meridiem*, D.V., *Deo volente*, and L. s. d., for *librae*, *solidi*, *denarii*, we have, without including scientific terms, many Latin nouns, e.g., *animal*, *genius*, *index*, *odium*, *omen*, *premium*, *radius*, *scintilla*, *stimulus*, *tribunal*, and adjectives, e.g., *complex*, *lucifer*, *miser*, *pauper*, *maximum*, *senior* and the ungrammatical *bonus*. The Lat. *veto*, I forbid, has been worked hard of late. The stage has given us *exit*, he goes out, and the universities *exeat*, let him go out, while law language contains a number of Latin verb forms, e.g., *affidavit* (Late Latin), he has testified, *caveat*, let him beware, *cognovit*, he has recognized—

"You gave them a *cognovit* for the amount of your costs after the trial, I'm told." (*Pickwick*, Ch. 46.)—

due to the initial words of certain documents. Similarly *item*, also, is the first word in each paragraph of an inventory. With this we may compare the *purview* of a statute, from the Old Fr. *pourveu* (*pourvu*), provided, with which it used to begin. A *tenet* is what one "holds." *Fiat* means "let it be done." When Mr. Weller lamented—

"Oh, Sammy, Sammy, vy worn't there a *alleybi*?" (*Pickwick*, Ch. 34.)—

it is safe to say that he was not consciously using the Latin adverb *alibi*, elsewhere, nor is the printer who puts in a *viz.* always aware that this is an old abbreviation for *videlicet*, i.e., *videre licet*, it is permissible to see. A *nostrum* is "our" unfailing remedy, and *tandem*, at length, instead of side by side, is a university joke.

Sometimes we have inflected forms of Latin words. A *rebus*¹ is a word or phrase represented "by things." *Requiem*, accusative of *requies*, rest, is the first word of the introit used in the mass for the dead—

"*Requiem aeternam dona eis, Domine,*"—

¹ But the word comes to us from French. In the 16th century such puzzles were called *rébus de Picardie*, because of their popularity in that province.

while *dirge* is the Latin imperative *dirige*, from the antiphon in the same service—

“*Dirige, Domine meus, in conspectu tuo viam meam.*”

The spelling *dirige* was once common—

“Also I byqwethe to eche of the paryshe prystys beyng at my *dyryge* and masse xiid.”

(Will of John Perfay, of Bury St. Edmunds, 1509.)

Query was formerly written *quaere*, seek, and *plaudit* is for *plaudite*, clap your hands, the appeal of the Roman actors to the audience at the conclusion of the play—

“Nunc, spectatores, Iovis summi causa clare *plaudite.*”

(PLAUTUS, *Amphitruo.*)

Debenture is for *debentur*, there are owing. *Dominie* is the Latin vocative *domine*, formerly used by schoolboys in addressing their master, while *pandy*, a stroke on the hand with a cane, is from *pande palmam*, hold out your hand. *Parse* is the Lat. *pars*, occurring in the question *Quae pars orationis?* What part of speech? *Omnibus*, for all, is a dative plural. *Limbo* is the ablative of Lat. *limbus*, an edge, hem, in the phrase “in *limbo patrum*,” where *limbus* is used for the abode of the Old Testament saints on the verge of Hades. It is already jocular in Shakespeare—

“I have some of 'em in *limbo patrum*, and there they are like to dance these three days.” (*Henry VIII.*, v. 3.)

Folio, *quarto*, etc., are ablatives, from the phrases *in folio*, *in quarto*, etc., still used in French. *Premises*, earlier *premisses*, is a slightly disguised Lat. *praemissas*, the aforesaid, lit. sent before, used in deeds to avoid repeating the full description of a property. It is thus the same word as logical *premisses*, or assumptions. *Quorum* is from a legal formula giving a list of persons “of whom” a certain number must be present. A *teetotum* is so called because it has, or once had, on one of its sides, a *T* standing for *totum*, all. It was also called simply a *totum*. The other three sides also bore letters to indicate what share, if any, of the stake they represented. Cotgrave has *totum* (*toton*), “a kind of game with a whirle-bone.” In spite of the interesting anecdote about the temperance orator with an impediment in his speech, it was probably *teetotum* that suggested *teetotaller*.

OUR VOCABULARY

We have also a few words straight from Greek, e.g., *analysis*, *aroma*, *atlas*, the world-sustaining demi-god whose picture used to decorate map-books, *colon*, *comma*, *dogma*, *epitome*, *miasma*, *nausea*, Gk. *nausia*, lit. sea-sickness, *nectar*, whence the fruit called a *nectarine*—

“*Nectarine* fruits which the compliant boughs
Yielded them, sidelong as they sat recline.”

(*Paradise Lost*, iv. 332.)—

pathos, *python*, *pyx*, *synopsis*, etc.; but most of our Greek words have passed through French *via* Latin, or are newly manufactured scientific terms, often most unscientifically constructed.

Gamut contains the Gk. *gamma* and the Latin conjunction *ut*. Guy d'Arezzo, who flourished in the 11th century, is said to have introduced the method of indicating the notes by the letters *a* to *g*. For the note below *a* he used the Gk. *gamma*. To him is attributed also the series of monosyllables by which the notes are also indicated. They are supposed to be taken from a Latin hymn to St John—

Ut queant laxis resonare fibris
Mira gestorum famuli tuorum
Solve polluti labii reatum
Sancte Iohannes.

Do is sometimes substituted for *ut* in French, and always in modern English.

In considering the Old French element in English, one has to bear in mind a few elementary philological facts. Nearly all French nouns and adjectives are derived from the accusative. I give, for simplicity, the nominative, adding the stem in the case of imparisyllabic words. The foundation of French is Vulgar Latin, which differs considerably from that we study at school. I only give Vulgar Latin forms where it cannot be avoided. For instance, in dealing with *culverin* (p. 36), I connect Fr. *couleuvre*, adder, with Lat. *coluber*, a snake. Every Romance philologist knows that it must represent Vulgar Lat. * *colōbra*; but this form, which, being conjectural, is marked with an asterisk, had better be forgotten by the general reader.

Our modern English words often preserve a French form which no longer exists, or they are taken from dialects, especially those of Normandy and Picardy, which differ greatly from that of

Paris. The word *caudle* illustrates both these points. It is the same word as modern Fr. *chaudeau*, "a *caudle*; or, warme broth" (Cotgrave), but it preserves the Old French¹ *-el* for *-eau*, and the Picard *c-* for *ch-*. An uncomfortable bridle which used to be employed to silence scolds was called the *branks*. It is a Scottish word, originally applied to a bridle improvised from a halter with a wooden "cheek" each side to prevent it from slipping—

"And then its shanks,
They were as thin, as sharp and sma'
As cheeks o' branks."

(BURNS, *Death and Doctor Hornbook*, vii. 4.)

These cheeks correspond to the two parallel levers called the "branches" of a bridle, and *brank* is the Norman *branque*, branch. All the meanings of *patch* answer to those of Fr. *pièce*. It comes from the Old French dialect form *pieche*, as *match* comes from *mèche*, and *cratch*, a manger, from *crèche*, of German origin, and ultimately the same word as *crib*. *Cratch* is now replaced, except in dialect, by *manger*, Fr. *mangeoire*, from *manger*, to eat, but it was the regular word in Mid. English—

"Sche childide her firste born sone, and wlapide him in clothis, and puttide him in a *cracche*." (WYCLIF, *Luke*, ii. 7.)

Pew is from Old Fr. *puy*, a stage, eminence, Lat. *podium*, which survives in *Puy-de-Dôme*, the mountain in Auvergne on which Pascal made his experiments with the barometer. *Dupuy* is a common family name in France, but the *Depews* of the West Indies have kept the older pronunciation.

Many Old French words which live on in England are obsolete in France. *Chime* is Old Fr. *chimbe* from Greco-Lat. *cymbalum*. Minsheu (1617) derived *dismal* from Lat. *dies mali*, evil days. This, says Trench, "is exactly one of those plausible etymologies which one learns after a while to reject with contempt." But Minsheu is substantially right, if we substitute Old Fr. *dis mal*, which is found as early as 1256. Old Fr. *di*, a day, also survives in the names of the days of the week, *lundi*, etc. In *remainder* and *remnant* we have the infinitive and present participle of an obsolete Old French verb derived from Lat. *remanere*. *Manor* and *power* are

¹ For simplicity the term Old French is used here to include all words not in modern use. Where a modern form exists it is given in parentheses.

also Old French infinitives, the first now only used as a noun (*manoir*), the second represented by *pouvoir*. *Misnomer* is the Anglo-French infinitive, "to misname."

In some cases we have preserved meanings now obsolete in French. *Trump*, in cards, is Fr. *trionphe*, "the card game called ruffe, or *trump*; also, the ruffe, or *trump* at it" (Cotgrave), but the modern French word for trump is *atout*, to all. *Rappee* is for obsolete Fr. (tabac) *râpé*, pulverized, rasped. Fr. *talon*, heel, from Vulgar Lat. * *talo*, *talon*-, for *talus*, was applied by falconers to the heel-claw of the hawk. This meaning, obsolete in French, has persisted in English. The *mizen* mast is the rearmost of three, but the Fr. *mât de misaine* is the fore-mast, and both come from Ital. *mezzana*, middle, "also the poop or *mizensail*¹ in a ship" (Torriano).

As in the case of Latin, we have some inflected French forms in English. *Lampon* is from the archaic Fr. *lampon*, "a drunken song" (Miège, *French Dict.*, 1688). This is coined from the imperative *lampons*, let us drink, regularly used as a refrain in seditious and satirical songs. For the formation we may compare American *vamose*, to skedaddle, from Span. *vamos*, let us go. The military *revelly* is the French imperative *réveillez*, wake up, but in the French army it is called the *diane*. The *gist* of a matter is the point in which its importance really "lies." *Ci-gist*, for Old Fr. *ci-gist*, Lat. *jacet*, here lies, is seen on old tombstones. *Tennis*, says Minshcu, is so called from Fr. *tenez*, hold, "which word the Frenchmen, the onely tennis-players, use to speake when they strike the ball." This etymology, for a long time regarded as a wild guess, has been shewn by recent research to be most probably correct. The game is of French origin, and it was played by French knights in Italy a century before we find it alluded to by Gower (c. 1400).

¹ The name was thus applied to a sail before it was given to a mast. Although the Italian word means "middle," it is perhaps, in this particular sense, a popular corruption of an Arabic word of quite different meaning. The discussion of so difficult a problem is rather out of place in a book intended for the general reader, but I cannot refrain from giving a most interesting note which I owe to Mr W. B. Whall, Master Mariner, the author of *Shakespeare's Sea Terms Explained*—"The sail was (until c. 1780) lateen, i.e., triangular, like the sail of a galley. The Saracens, or Moors, were the great galley sailors of the Mediterranean, and *mizen* comes from Arab *miezén*, balance. The *mizen* is, even now, a sail that 'balances,' and the reef in a *mizen* is still called the 'balance' reef."

Erasmus tells us that the server called out *accipe*, to which his opponent replied *mitte*, and as French, and not Latin, was certainly the language of the earliest tennis-players, we may infer that the spectators named the game from the foreign word with which each service began. In French the game is called *paume*, palm of the hand; cf. *fives*, also a slang name for the hand. The archaic *assoil*—

“And the holy man he *assoil'd* us, and sadly we sail'd away.”

(TENNYSON, *Voyage of Maeldune*, xi. 12.)—

is the present subjunctive of the Old Fr. *asoldre* (*absoudre*), to absolve, used in the stereotyped phrase *Dieus asoile*, may God absolve.

A linguistic invasion such as that of English by Old French is almost unparalleled. We have instances of the expulsion of one tongue by another, e.g., of the Celtic dialects of Gaul by Latin and of those of Britain by Anglo-Saxon. But a real blending of two languages can only occur when a large section of the population is bilingual for centuries. This, as we know, was the case in England. The Norman dialect, already familiar through inevitable intercourse, was transplanted to England in 1066. It developed further on its own lines into Anglo-Norman, and then, mixed with other French dialects, for not all the invaders were Normans, and political events brought various French provinces into relation with England, it produced Anglo-French, a somewhat barbarous tongue which was the official language till 1362, and with which our legal jargon is saturated. We find in Anglo-French many words which are unrecorded in continental Old French, among them one which we like to think of as essentially English, viz., *dueté*, duty, an abstract formed from the past participle of Fr. *devoir*. This verb has also given us *endeavour*, due to the phrase *se mettre en devoir*—

“Je me suis *en devoir* mis pour moderer sa cholere tyrannicque.”¹

(*Rabelais*, i. 29.)

No dictionary can keep up with the growth of a language. The *New English Dictionary* had done the letter *C* before the *cinematograph* arrived, but got it in under *K*. Words of this kind are manu-

¹ “I have *endeavoured* to moderate his tyrannical choler” (Urquhart's Translation, 1653).

OUR VOCABULARY

factured in such numbers that the lexicographer is inclined to wait and see whether they will catch on. In such cases it is hard to prophesy. The population of this country may be divided into those people who have been operated on for *appendicitis* and those who are going to be. Yet this word was considered too rare and obscure for insertion in the first volume of the *New English Dictionary* (1888), the greatest word-book that has ever been projected. *Sabotage* looks, unfortunately, as if it had come to stay. It is a derivative of *saboter*, to scamp work, from *sabot*, a wooden shoe, used contemptuously of an inferior article. The great French dictionaries do not know it in its latest sense of malicious damage done by strikers, and the *New English Dictionary*, which finished *Sa-* in the year 1912, just missed it. *Hooligan* is not recorded by the *New English Dictionary*. The original *Hooligans* were a spirited Irish family of that name whose proceedings enlivened the drab monotony of life in Southwark towards the end of the 19th century. The word is younger than the Australian *larrikin*, of doubtful origin (see p. 149), but older than Fr. *apache*. The adoption of the Red Indian name *Apache* for a modern Parisian bravo is a curious parallel to the 18th-century use of *Mohock* (Mohawk) for an aristocratic London ruffler.

Heckle is first recorded in its political sense for 1880. The *New English Dictionary* quotes it from *Punch* in connexion with the Fourth Party. In Scottish, however, it is old in this sense, so that it is an example of a dialect word that has risen late in life. Its southern form *hatchell* is common in Mid. English in its proper sense of "teasing" hemp or flax, and the metaphor is exactly the same. *Tease*, earlier *toose*, means to pluck or pull to pieces, hence the name *teasel* for the thistle used by wool-carders. The older form is seen in the derivative *tousle*, the family name *Tozer* and the dog's name *Towser*. *Fleckless*, a common Scottish word, was hardly literary English before Carlyle. It is now quite familiar—

"Thrifless, shiftless, *fleckless*."

(D. LLOYD GEORGE, 1st Nov. 1911.)

There is a certain appropriateness in the fact that almost the first writer to use it was James I. It is for *effectless*. I never heard of a *week-end* till I paid a visit to Lancashire in 1883. It has long since invaded the whole island. An old *geezer* has a modern sound, but it is the medieval *guiser*, *guisard*, mummer, which has persisted in dialect and re-entered the language.

The fortunes of a word are sometimes determined by accident. *Glamour* (see p. 116) was popularized by Scott, who found it in old ballad literature. *Grail*, the holy dish at the Last Supper, would be much less familiar but for Tennyson. *Mascot*, from a Provençal word meaning sorcerer, dates from Audran's operetta *La Mascotte* (1880). *Jingo* first appears in conjurors' jargon of the 17th century. It has been conjectured to represent Basque *jinko*, God, picked up by sailors. If this is the case, it is probably the only pure Basque word in English. The Ingoldsby derivation from St Gengulphus—

"Sometimes styled 'The Living *Jingo*,' from the great tenaciousness of vitality exhibited by his severed members,"—

is of course a joke. In 1878, when war with Russia seemed imminent, a music-hall singer, the Great Macdermott, delighted large audiences with—

"We don't want to fight, but, by *Jingo*, if we do,
We've got the ships, we've got the men, we've got the
money too."

Hence the name *jingo* applied to that ultra-patriotic section of the population which, in war-time, attends to the shouting.¹ Fr. *chauvin*, a jingo, is the name of a real Napoleonic veteran introduced into Scribe's play *Le Soldat Laboureur*. *Barracking* is known to us only through the visits of English cricket teams to Australia. It is said to come from a native Australian word meaning derision. The American *caucus* was first applied (1878) by Lord Beaconsfield to the Birmingham Six Hundred. In 18th-century American it means meeting or discussion. It is probably connected with a North American Indian (Algonkin) word meaning counsellor, an etymology supported by that of *pow-wow*, a palaver or confab, which is the Algonkin for a medicine-man. With these words may be mentioned *Tammany*, now used of a famous political body, but, in the 18th century, of a society named after the "tutelar saint" of Pennsylvania. The original Tammany was an Indian chief with whom William Penn negotiated for grants of land about the end of the 17th century. *Littoral* first became familiar in connexion with Italy's ill-starred Abyssinian adventure, and *hinterland* marked the appearance of Germany as a colonial power—

¹ The credit of first using the word in the political sense is claimed both for George Jacob Holyoake and William Minto.

OUR VOCABULARY

"'Let us glance a moment,' said Mr Queed, 'at Man, as we see him first emerging from the dark *hinterlands* of history.'"

(H. S. HARRISON, *Queed*, Ch. 17.)

Sometimes the blunder of a great writer has enriched the language. Scott's *bartisan*—

"Its varying circle did combine
Bulwark, and *bartisan*, and line,
And bastion, tower . . ."

(*Marmion*, vi. 2.)—

is a mistake for *bratticing*, timber-work, a word of obscure origin of which several corruptions are found in early Scottish. It is rather a favourite with writers of "sword and cloak" novels. Other sham antiques are *slug-horn*, Chatterton's absurd perversion of the Gaelic *slogan*, war-cry, copied by Browning—

"Dauntless the *slug-horn* to my lips I set,
And blew 'Childe Roland to the Dark Tower came.'"—

and Scott's extraordinary misuse of *warison*, security, a doublet of *garrison*, as though it meant "war sound"—

"Or straight they sound their *warison*,
And storm and spoil thy garrison."

(*Lay*, iv. 21.)

Scott also gave currency to *niddering*, a coward—

"Faithless, mansworn,¹ and *niddering*."

(*Ivanhoe*, Ch. 42.)—

which has been copied by Lytton and Kingsley, and elaborated into *nidderling* by Crockett. It is a misprint in an early edition of William of Malmesbury for *niding* or *nithing*, cognate with Ger. *neid*, envy. This word, says Camden, is mightier than *Abracadabra*,² since—

¹ From Anglo-Sax. *man*, deceit, cognate with the first syllable of Ger. *meineid*, perjury.

² This word, which looks like an unsuccessful palindrome, belongs to the language of medieval magic. It seems to be artificially elaborated from *abraxas*, a word of Persian origin used by a sect of Greek gnostics. Its letters make up the magic number 365, supposed to represent the number of spirits subject to the supreme being.

THE ROMANCE OF WORDS

"It hath levied armies and subdued rebellious enemies. For when there was a dangerous rebellion against King William Rufus, and Rochester Castle, then the most important and strongest fort of this realm was stoutly kept against him, after that he had but proclaimed that his subjects should repair thither to his camp, upon no other penalty, but that whosoever should refuse to come should be reputed a *niding*, they swarmed to him immediately from all sides in such numbers that he had in a few days an infinite army, and the rebels therewith were so terrified that they forthwith yielded." (*Remains concerning Britain.*)

Derring-do is used several times by Spenser, who explains it as "manhood and chevalrie." It is due to his misunderstanding of a passage in *Lidgate*, in which it is an imitation of Chaucer, complicated by a misprint. Scott took it from Spenser—

"'Singular,' he again muttered to himself, 'if there be two who can do a deed of such *derring-do*.' " (*Ivanhoe*, Ch. 29.)—

and from him it passed to Bulwer Lytton and later writers.

Such words as these, the illegitimate offspring of genius, are to be distinguished from the "ghost-words" which dimly haunt the dictionaries without ever having lived (see p. 158). Speaking generally, we may say that no word is ever created *de novo*. The names invented for commercial purposes are not exceptions to this law. *Bovril* is compounded of Lat. *bos*, ox, and *vril*,¹ the mysterious power which plays so important a part in Lytton's *Coming Race*, while *Tono-Bungay* suggests *tonic*. The only exception to this is *gas*, the arbitrary coinage of the Belgian chemist Van Helmont in the 17th century. But even this is hardly a new creation, because we have Van Helmont's own statement that the word *chaos* was vaguely present to his mind. *Chortle* has, however, secured a limited currency, and is admitted by the *New English Dictionary*—

"O frabjous day! Callooh! callay!
He *chortled* in his joy."

(*Through the Looking-Glass.*)—

and, though an accurate description of the *boojum* is lacking, most people know it to be a dangerous variety of *snark*.

¹ In coining *vril* Lytton probably had in mind Lat. *vis*, *vires*, power, or the adjective *virilis*.

WANDERINGS OF WORDS

IN assigning to a word a foreign origin, it is necessary to show how contact between the two languages has taken place, or the particular reasons which have brought about the borrowing. A Chinese word cannot suddenly make its appearance in Anglo-Saxon, though it may quite well do so in modern English. No nautical terms have reached us from the coast of Bohemia (*Winter's Tale*, iii. 3), nor is the vocabulary of the wine-trade enriched by Icelandic words. Although we have words from all the languages of Europe, our direct borrowings from some of them have been small. The majority of High German words in English have passed through Old French, and we have taken little from modern German. On the other hand, commerce has introduced a great many words from the old Low German dialects of the North Sea and the Baltic.

The Dutch¹ element in English supplies a useful object lesson on the way in which the borrowing of words naturally takes place. As a great naval power, the Dutch have contributed to our nautical vocabulary a number of words, many of which are easily recognized as near relations; such are *boom* (beam), *skipper* (shipper), *orlop* (over leap), the name given to a deck which "over-runs" the ship's hold. *Yacht*, properly a "hunting" ship, is cognate with Ger. *jagd*, hunting, but has no English kin. Hexham has *jaght*, "zee-roovers schip, pinace, or pirats ship." The modern Dutch spelling is *jacht*. We should expect to find art terms from the country of Hobbema, Rubens, Vandyke, etc. See *easel* (p. 36), *etch* (p. 108), *lay-figure* (p. 132), *sketch* (p. 25). *Landscape*, earlier *landskip*, has the suffix which in English would be *-ship*. In the 16th century Camden speaks of "a *landskip*, as they call it." The Low Countries were for two centuries the cock-pit of Europe, and many military terms were brought back to England by Dugald Dalgetty and the armies which "swore terribly in Flanders." Such are *cashier* (p. 125), *forlorn hope* (p. 105), *tattoo* (p. 129). Other interesting military words are *leaguer* (lair), recently reintroduced

¹ This includes Flemish, spoken in a large part of Belgium and in the north-east of France.

from South Africa as *laager*, and *furlough*. The latter word, formerly pronounced to rime with *cough*, is from Du. *verlof* (for leave); cf. archaic Ger. *verlaub*, now replaced by *urlaub*. *Knapsack*,¹ a food sack, comes from colloquial Du. *knap*, food, or what the Notts colliers call *snap*. We also find it called a *snapsack*. Both *knap* and *snap* contain the idea of "crunching"—

"I would she (Report) were as lying a gossip in that as ever *knapped* ginger."

(*Merchant of Venice*, iii. 1.)

Roster (roaster) is the Dutch for gridiron, the allusion being to the parallel lines of the list or plan; for a somewhat similar metaphor cf. *cancel* (p. 73). The pleasant fiction that—

"The children of Holland take pleasure in making
What the children of England take pleasure in breaking,"—

confirms the derivation of *toy* from Du. *tuig*, implement, thing, stuff, etc., a word, like its German cognate *zeug*, with an infinity of meanings. We now limit *toy* to the special sense represented by Du. *speel-tuig*, plaything.

Our vocabulary dealing with war and fortification is chiefly French, but most of the French terms come from Italian. Addison wrote an article in No. 165 of the *Spectator* ridiculing the Frenchified character of the military language of his time, and, in the 16th century, Henri Estienne, patriot, printer and philologist, lamented that future historians would believe, from the vocabulary employed, that France had learnt the art of war from Italy. As a matter of fact, she did. The earliest writers on the new tactics necessitated by "villainous saltpetre" were Italians trained in condottiere warfare. They were followed by the great French theorists and engineers of the 16th and 17th centuries, who naturally adopted a large number of Italian terms which thus passed later into English.

A considerable number of Spanish and Portuguese words have reached us in a very roundabout way (see pp. 25-8). This is not surprising, when we consider how in the 15th and 16th centuries the world was dotted with settlements due to the Portuguese and Spanish adventurers who had a hundred years' start of our own.

¹ *Haversack*, oat-sack, comes through French from German.

There are very few Celtic words either in English or French. In each country the result of conquest was, from the point of view of language, complete. A few words from the Celtic languages have percolated into English in comparatively recent times, but many terms which we associate with the picturesque Highlanders are not Gaelic at all.¹ *Tartan* comes through French from the *Tartars* (see p. 43), *kilt* is a Scandinavian verb, "to tuck up," and *dirk*,² of unknown origin, first appears about 1600. For *trews* see p. 95.

A very interesting part of our vocabulary, the *canting*, or rogues' language, dates mostly from the 17th and 18th centuries, and includes contributions from many of the European languages, together with a large Romany element. The early dictionary makers paid great attention to this aspect of the language. Elisha Coles, who published a fairly complete English dictionary in 1676, says in his preface, "'Tis no disparagement to understand the canting terms: it may chance to save your throat from being cut, or (at least) your pocket from being pick'd."

Words often go long journeys. *Boss* is in English a comparatively modern Americanism, but, like many American words, it belongs to the language of the Dutch settlers who founded New Amsterdam (New York). It is Du. *baas*, master, which has thus crossed the Atlantic twice on its way from Holland to England. A number of Dutch words became familiar to us about the year 1900 in consequence of the South African war. One of them, *slim*, 'cute, seems to have been definitely adopted. It is cognate with Ger. *schlimm*, bad, and Eng. *slim*, slender, and the latter word has for centuries been used in the Eastern counties in the very sense in which it has now been reintroduced.

Apricot is a much-travelled word. It comes to us from Fr. *abricot*, while the Shakespearean *apricock*—

"Feed him with *apricocks* and dewberries."

(*Midsummer Night's Dream*, iii. 1.)—

represents the Spanish or Portuguese form. Ger. *aprikose* comes,

¹ This applies also to some of the clan names. e.g., *Macpherson*, son of the parson, *Macnab*, son of the abbot.

² My own conviction is that it is identical with Dan. *dirik*, *dirk*, a pick-lock. See *Dietrich* (p. 39). An implement used for opening an enemy may well have been named in this way. Cf. Du. *opsteeker* (up-sticker), "a pick-lock, a great knife, or a dagger" (Sewel, 1727).

via Dutch, from the French plural. The word was adopted into the Romance languages from Arab. *al-barquq*, where *al* is the definite article (cf. examples on p. 93), while *barquq* comes, through medieval Greek, from Vulgar Lat. *praecoquum*, for *praecox*, early-ripe. Thus the word first crossed the Adriatic, passed on to Asia Minor or the north coast of Africa, and then, travelling along the Mediterranean, re-entered Southern Europe.

Many other Arabic trade-words have a similar history. *Carat* comes to us, through French, from Italian *carato*, "a waight or degree called a *caract*" (Florio). The Italian word is from Arabic, but the Arabic form is a corruption of Gk. *keration*, fruit of the locust tree, lit. little horn, also used of a small weight. The verb to *garble*, now used only of confusing or falsifying,¹ meant originally to sort or sift, especially spices—

"*Garbler* of spices is an officer of great antiquity in the city of London, who may enter into any shop, warehouse, etc., to view and search drugs, spices, etc., and to *garble* the same and make them clean." (Cowell's *Interpreter*, 1607.)

It represents Span. *garbellar*, from *garbello*, a sieve. This comes from Arab. *ghirbal*, a sieve, borrowed from Lat. *cribellum*, diminutive of *cribrum*. *Quintal*, an old word for hundred-weight, looks as if it had something to do with five. Fr. and Span. *quintal* are from Arab. *qintar*, hundred-weight, which is Lat. *centenarium* (whence directly Ger. *zentner*, hundred-weight). The French word passed into Dutch, and gave, with a diminutive ending, *kindekijn*, now replaced by *kinnetje*, a firkin.² We have adopted it as *kilderkin*, but have doubled its capacity. With these examples of words that have passed through Arabic may be mentioned *talisman*, not a very old word in Europe, from Arab. *tilsam*, magic picture, ultimately from Gk. *telein*, to initiate into mysteries, lit. to accomplish, and *effendi*, a Turkish corruption of Gk. *authentēs*, a master, whence *authentic*.

Hussar seems to be a Late Latin word which passed into Greece and then entered Central Europe via the Balkans. It comes into

¹ "It was a wholly *garbled* version of what never took place" (A. Birrell, in the House, 26th Oct. 1911). The bull appears to be a laudable concession to Irish national feeling.

² Formerly *ferdekin*, a derivative of Du. *vierde*, fourth; cf. *farthing*, a little fourth.

16th-century German from Hungar. *huszar*, freebooter. This is from a Serbian word which means also pirate. It represents medieval Gk. *koursarios*, a transliteration of Vulgar Lat. *cursarius*, from *currere*, to run, which occurs also with the sense of pirate in medieval Latin. *Hussar* is thus a doublet of *corsair*. The immediate source of *sketch* is Du. *schets*, "draught of any picture" (Hexham), from Ital. *schizzo*, "an ingroisement or first rough draught of anything" (Florio), whence also Fr. *esquisse* and Ger. *skizze*. The Italian word represents Greco-Lat. *schedium*, an extempore effort.

Assassin and *slave* are of historic interest. *Assassin*, though not very old in English, dates from the Crusades. Its oldest European form is Ital. *assassino*, and it was adopted into French in the 16th century. Henri Estienne, whose fiery patriotism entered even into philological questions, reproaches his countrymen for using foreign terms. They should only adopt, he says, Italian words which express Italian qualities hitherto unknown to the French, such as *assassin*, *charlatan*, *poltron*! *Assassin* is really a plural, from the *hachaschin*, eaters of the drug *haschish*, who executed the decrees of the Old Man of the Mountains. It was one of these who stabbed Edward Longshanks at Acre. The first *slaves* were captive *Slavonians*. We find the word in most of the European languages. The fact that none of the Western tribes of the race called themselves *Slavs* or *Slavonians* shows that the word could not have entered Europe *via* Germany, where the Slavs were called Wends. It must have come from the Byzantine empire *via* Italy.

Some Spanish words have also come to us by the indirect route. The *cocoa* which is grateful and comforting was formerly spelt *cacao*, as in French and German. It is a Mexican word. The *cocoa* of *cocoa-nut* is for *coco*, a Spanish baby-word for an ugly face or bogey-man. The black marks at one end of the nut give it, especially before the removal of the fibrous husk, some resemblance to a ferocious face. Stevens (1706) explains *coco* as "the word us'd to fright children; as we say the Bulbeggan."

Mustang seems to represent two words, *mestengo y mostrenco*, "a strai'er" (Percyvall). The first appears to be connected with *mesta*, "a monthly fair among herdsmen; also, the laws to be observed by all that keep or deal in cattle" (Stevens), and the second with *mostrar*, to show, the finder being expected to advertise a stray. The original *mustangs* were of course descended from the strayed horses of the Spanish conquistadors. *Ranch*, Span. *rancho*, a row (of huts), is a doublet of *rank*, from Fr. *rang*, Old Fr. *reng*, Old High

Ger. *hring*, a ring. Thus what is now usually straight was once circular, the ground idea of arrangement surviving. Another doublet is Fr. *harangue*, due to the French inability to pronounce *hr-* (see p. 48), a speech delivered in the ring. Cf. also Ital. *aringo*, "a riding or careering place, a liste for horses, or feates of armes: a declamation, an oration, a noise, a common loud speech" (Florio), in which the "ring" idea is also prominent.

Other "cow-boy" words of Spanish origin are the less familiar *cinch*, girth of a horse, Span. *cincha*, from Lat. *cingula*, also used metaphorically—

"The state of the elements enabled Mother Nature 'to get a *cinch*' on an honourable aestheticism." (Snaith, *Mrs. Fitz*, Ch. 1.)—

and the formidable riding-whip called a *quirt*, Span. *cuerda*, cord—

"Whooping and swearing as they plied the *quirt*."
(Masefield, *Rosas*.)

Stories of Californian life often mention Span. *reata*, a tethering-rope, from the verb *reatar*, to bind together, Lat. *re-aptare*. Combined with the definite article (*la reata*) it has given *lariat*, a familiar word in literature of the Buffalo Bill character. *Lasso*, Span. *lazo*, Lat. *laqueus*, snare, is a doublet of Eng. *lace*.

When, in the *Song of Hiawatha*—

"Gitche Manito, the mighty,
Smoked the *calumet*, the Peace-pipe,
As a signal to the nations,"—

he was using an implement with a French name. *Calumet* is an Old Norman word for *chalumeau*, reed, pipe, a diminutive from Lat. *calamus*. It was naturally applied by early French voyagers to the "long reed for a pipe-stem." Eng. *shawm* is the same word without the diminutive ending. Another Old French word, once common in English, but now found only in dialect, is *felon*, a whitlow. It is used more than once by Thomas Hardy—

"I've been visiting to Bath because I had a *felon* on my thumb." (*Far from the Madding Crowd*, Ch. 33.)

This is still an everyday word in Canada and the United States. It is a metaphorical use of *felon*, a fell villain. A whitlow was called in Latin *furunculus*, "a little theefe; a sore in the bodie called a *fellon*" (Cooper), whence Fr. *furoncle*, or *froncle*, "the hot and hard

bumpe, or swelling, tearmed, a *fellon*" (Cotgrave). Another Latin name for it was *tagax*, "a *felon* on a man's finger" (Cooper), lit. thievish. One of its Spanish names is *padraastro*, lit. step-father. I am told that an "agnail" was formerly called a "step-mother" in Yorkshire. This is a good example of the semantic method in etymology (see pp. 82-86).

Some of the above instances show how near to home we can often track a word which at first sight appears to belong to another continent. This is still more strikingly exemplified in the case of Portuguese words, which have an almost uncanny way of pretending to be African or Indian. Some readers will, I think, be surprised to hear that *assegai* occurs in Chaucer, though in a form not easily recognizable. It is a Berber word which passed through Spanish and Portuguese into French and English. We find Fr. *archegaie* in the 14th century, *azagaie* in Rabelais, and the modern form *zagaie* in Cotgrave, who describes it as "a fashion of slender, long, and long-headed pike, used by the Moorish horsemen." In Mid. English *l'archegaie* was corrupted by folk-etymology (see p. 93) into *lancegay*, *launcegay*, the form used by Chaucer—

"He worth upon his stede gray,
And in his hond a *launcegay*,
A long swerd by his syde."

(Sir *Thopas*, l. 40.)

The use of this weapon was prohibited by statute in 1406, hence the early disappearance of the word.

Another "Zulu" word which has travelled a long way is *kraal*. This is a contracted Dutch form of Port. *curral*, a sheepfold (cf. Span. *corral*, a pen, enclosure). Both *assegai* and *kraal* were taken to South-East Africa by the Portuguese and then adopted by the Boers and Kafirs.¹ *Sjambok* occurs in 17th-century accounts of India in the form *chawbuck*. It is a Persian word, spelt *chabouk* by Moore, in *Lalla Rookh*. It was adopted by the Portuguese as *chabuco*, "in the Portuguese India, a whip or scourge"² (Vieyra, *Port. Dict.*, 1794). *Fetish*, an African idol, first occurs in the records

¹ *Kafir* (Arab.) means infidel.

² Eng. *chawbuck* is used in connexion with the punishment we call the *bastinado*. This is a corruption of Span. *bastonada*, "a stroke with a club or staff" (Stevens, 1706). On the other hand, we extend the meaning of *drub*, the Arabic word for *bastinado*, to a beating of any kind.

of the early navigators, collected and published by Hakluyt and Purchas. It is the Port. *feitico*, Lat. *factitius*, artificial, applied by the Portuguese explorers to the graven images of the heathen. The corresponding Old Fr. *faitis* is rather a complimentary adjective, and everyone remembers the lady in Chaucer who spoke French fairly and *fetousli*. *Palaver*, also a travellers' word from the African coast, is Port. *palavra*, word, speech, Greco-Lat. *parabola*. It is thus a doublet of *parole* and *parable*, and is related to *parley*. *Ayah*, an Indian nurse, is Port. *aia*, nurse, of unknown origin. *Caste* is Port. *casta*, pure, and a doublet of *chaste*. *Tank*, an Anglo-Indian word of which the meaning has narrowed in this country, is Port. *tanque*, a pool or cistern, Lat. *stagnum*, whence Old Fr. *estang* (*étang*) and provincial Eng. *stank*, a dam, or a pond banked round. *Cobra* is the Portuguese for snake, cognate with Fr. *couleuvre*, Lat. *coluber* (see p. 13). We use it as a nabbreviation for *cobra de capello*, hooded snake, the second part of which is identical with Fr. *chapeau* and cognate with *cape*, *chapel* (p. 121), *chaplet*, a garland, and *chaperon*, a "protecting" hood. From still farther afield than India comes *joss*, a Chinese god, a corruption of Port. *deos*, Lat. *deus*. Even *mandarin* comes from Portuguese, and not Chinese, but it is an Eastern word, ultimately of Sanskrit origin.

The word *gorilla* is perhaps African, but more than two thousand years separate its first appearance from its present use. In the 5th or 6th century B.C., a Carthaginian navigator named Hanno sailed beyond the Pillars of Hercules along the west coast of Africa. He probably followed very much the same route as Sir Richard Dalyngridge and Saxon Hugh when they voyaged with Witta the Viking. He wrote in Punic a record of his adventures, which was received with the incredulity usually accorded to travellers' tales. Among the wonders he encountered were some hairy savages called *gorillas*. His work was translated into Greek and later on into several European languages, so that the word became familiar to naturalists. In 1847 it was applied to the giant ape, which had recently been described by explorers.

The origin of the word *silk* is a curious problem. It is usually explained as from Greco-Lat. *sericum*, a name derived from an Eastern people called the *Seres*, presumably the Chinese. It appears in Anglo-Saxon as *seolc*. Now, at that early period, words of Latin origin came to us by the overland route and left traces of their passage. But all the Romance languages use for silk a name derived from Lat. *saeta*, bristle, and this name has penetrated even

into German (*seide*) and Dutch (*zijde*). The derivatives of *sericum* stand for another material, *serge*. Nor can it be assumed that the *r* of the Latin word would have become in English always *l* and never *r*. There are races which cannot sound the letter *r*, but we are not one of them. As the word *silk* is found also in Old Norse, Swedish, Danish and Old Slavonian, the natural inference is that it must have reached us along the north of Europe, and, if derived from *sericum*, it must, in the course of its travels, have passed through a dialect which has no *r*.

CHAPTER III

WORDS OF POPULAR MANUFACTURE

IN a sense, all nomenclature, apart from purely scientific language, is popular. But real meanings are often so rapidly obscured that words become mere labels, and cease to call up the image or the poetic idea with which they were first associated. To take a simple instance, how many people realize that the *daisy* is the "day's eye"?—

"Wele by reson men it calle may
The *dayeseye* or ellis the 'eye of day.' "

(CHAUCER, *Legend of Good Women*, Prol., l. 184.)

In studying that part of our vocabulary which especially illustrates the tendencies shown in popular name-giving, one is struck by the keen observation and imaginative power shown by our far-off ancestors, and the lack of these qualities in later ages.

Perhaps in no part of the language does this appear so clearly as in the names of plants and flowers. The most primitive way of naming a flower is from some observed resemblance, and it is curious to notice the parallelism of this process in various languages. Thus our *crowfoot*, *cranesbill*, *larkspur*, *monkshood*, *snappedragon* are in German *hahnenfuss* (cock's-foot), *storchschnabel* (stork's-bill), *rittersporn* (knight's-spur), *eisenhut* (iron hat), *löwenmaul* (lion's-mouth). I have purposely chosen instances in which the correspondence is not absolute, because examples like *löwenzahn* (lion's-tooth), *dandelion* (Fr. *dent de lion*) may be suspected of being mere

translations. I give the names in most general use, but the provincial variants are numerous, though usually of the same type. The French names of the flowers mentioned are still more like the English. The more learned words which sometimes replace the above are, though now felt as mere symbols, of similar origin, e.g., *geranium* and *pelargonium*, used for the cultivated *cranesbill*, are derived from the Greek for crane and stork respectively. So also in *chelidonium*, whence our *celandine* or *swallow-wort*, we have the Greek for swallow.

In the English names of plants we observe various tendencies of the popular imagination. We have the crudeness of *cowslip* for earlier *cowslap*, cow-dung, and many old names of unquotable coarseness, the quaintness of *sweet william*, *lords and ladies*, *bachelors' buttons*, *dead men's fingers*, and the exquisite poetry of *forget-me-not*, *heart's-ease*, *love in a mist*, *traveller's joy*. There is also a special group named from medicinal properties, such as *feverfew*, a doublet of *febrifuge*, and *tansy*, Fr. *tanaisie*, from Greco-Lat. *athanasia*, immortality. We may compare the learned *saxifrage*, stone-breaker, of which the Spanish doublet is *sassafras*. The German name is *steinbrech*.

There must have been a time when a simple instinct for poetry was possessed by all nations, as it still is by uncivilized races and children. Among European races this instinct appears to be dead for ever. We can name neither a mountain nor a flower. Our Mount Costigan, Mount Perry, Mount William cut a sorry figure beside the peaks of the Bernese Oberland, the Monk, the Maiden, the Storm Pike, the Dark Eagle Pike.¹ Occasionally a race which is accidentally brought into closer contact with nature may have a happy inspiration, such as the *Drakensberg* (dragon's mountain) or *Weenen*² (weeping) of the old *voortrekkers*. But the Cliff of the Falling Flowers, the name of a precipice over which the Korean queens cast themselves to escape dishonour, represents an imaginative realm which is closed to us.³ The botanist who describes a new flower hastens to join the company of Messrs *Dahl*, *Fuchs*, *Lobel*, *Magnol* and *Wistar*, while fresh varieties are used to immortalize a florist and his family.

¹ But *Finsteraarhorn* is perhaps from the river *Aar*, not from *aar*, eagle.

² A place where a number of settlers were massacred by the Zulus.

³ "Two mountains near Dublin, which we, keeping in the grocery line, have called the Great and the Little Sugarloaf, are named in Irish the Golden Spears." (Trench, *On the Study of Words*.)

The names of fruits, perhaps because they lend themselves less easily to imaginative treatment, are even duller than modern names of flowers. The only English names are the *apple* and the *berry*. New fruits either retained their foreign names (*cherry*, *peach*, *pear*, *quince*) or were violently converted into *apples* or *berries*, usually the former. This practice is common to the European languages, the *apple* being regarded as the typical fruit. Thus the orange is usually called in North Germany *apfelsine*, apple of China, with which we may compare our "China orange." In South Germany it was called *pomeranze* (now used especially of the Seville orange), from Ital. *pomo*, apple, *arancia*, orange. Fr. *orange* is folk-etymology (*or*, gold) for **arange*, from Arab. *narandj*, whence Span. *naranja*. *Melon* is simply the Greek for "apple," and has also given us *marmalade*, which comes, through French, from Port. *marmelada*, quince jam, a derivative of Greco-Lat. *melimelum*, quince, lit. honey-apple. *Pine-apple* meant "fir-cone" as late as the 17th century, as Fr. *pomme de pin* still does.¹ The fruit was named from its shape, which closely resembles that of a fire-cone. *Pomegranate* means "apple with seeds." We also find the apricot, lemon (*pom-citron*), peach and quince all described as apples.

At least one fruit, the *greengage*, is named from a person, Sir William Gage, a gentleman of Suffolk, who popularized its cultivation early in the 18th century. It happens that the French name of the fruit, *reine-claude* (pronounced *glaude*), is also personal, from the wife of Francis I.

Animal nomenclature shows some strange vagaries. The resemblance of the *hippopotamus*, lit. river-horse, to the horse, hardly extends beyond their common possession of four legs.² The lion would hardly recognize himself in the *ant-lion* or the *sea-lion*, still less in the *chameleon*, lit. earth-lion, the first element of which occurs also in *camomile*, earth-apple. The *guinea-pig* is not a pig, nor does it come from Guinea (see p. 46). *Porcupine* means "spiny pig." It has an extraordinary number of early variants, and Shake-

¹ The French name for the fruit is *ananas*, a Brazilian word. A vegetarian friend of the writer, misled by the superficial likeness of this word to *banana*, once petrified a Belgian waiter by ordering half a dozen *ananas* for his lunch.

² A reader calls my attention to the fact that, when the hippopotamus is almost completely submerged, the pointed ears, prominent eyes and large nostrils are grotesquely suggestive of a horse's head. This I have recently verified at the Zoo.

speare wrote it *porpentine*. One Mid. English form was *porkpoint*. The French name has hesitated between *spine* and *spike*. The modern form is *porc-épic*, but Palsgrave has "*porkeþyn*, a beest, *porc espin*." *Porpoise* is from Old Fr. *porpeis*, for *porc peis* (Lat. *porcus piscis*), pig-fish. The modern French name is *marsouin*, from Ger. *meerschwein*, sea-pig; cf. the name *sea-hog*, formerly used in English. Old Fr. *peis* survives also in *grampus*, Anglo-Fr. *grampaïs* for *grand peis*, big fish, but the usual Old French word is *craspeis* or *graspeis*, fat fish.

The *caterpillar* seems to have suggested in turn a cat and a dog. Our word is corrupted by folk-etymology from Old Fr. *chatepeleuse*, "a corne-devouring mite, or weevell" (Cotgrave). This probably means "woolly cat," just as a common species is popularly called *woolly bear*, but it was understood as being connected with the French verb *peler*, "to *pill*, pare, barke, unrinde, unskin" (Cotgrave). The modern French name for the caterpillar is *chenille*, a derivative of *chien*, dog. It has also been applied to a fabric of a woolly nature; cf. the botanical *catkin*, which is in French *chaton*, kitten.

Some animals bear nicknames. *Dotterel* means "dotard," and *dodo* is from the Port. *doudo*, mad. *Ferret* is from Fr. *furet*, a diminutive from Lat. *fur*, thief. *Shark* was used of a sharper or greedy parasite before it was applied to the fish. This, in the records of the Elizabethan voyagers, is more often called by its Spanish name *tiburón*, whence Cape Tiburon, in Haiti. The origin of *shark* is unknown, but it appears to be identical with *shirk*, for which we find earlier *sherk*. We find Ital. *scrocco* (whence Fr. *escroc*), Ger. *schurke*, Du. *schurk*, rascal, all rendered "shark" in early dictionaries, but the relationship of these words is not clear. The *palmer*, i.e., pilgrim, worm is so called from its wandering habits. *Ortolan*, the name given by Tudor cooks to the garden bunting, means "gardener" (Lat. *hortus*, garden). It comes to us through French from Ital. *ortolano*, "a gardener, an orchard keeper. Also a kinde of daintie birde in Italic, some take it to be the linnet" (Florio). We may compare Fr. *bouvreuil*, bull-finch, a diminutive of *bouvier*, ox-herd. This is called in German *dompsaffe*, a contemptuous name for a cathedral canon. Fr. *moineau*, sparrow, is a diminutive of *moine*, monk. The wagtail is called in French *lavandière*, laundress, from the up and down motion of its tail suggesting the washerwoman's beetle, and *bergeronnette*, little shepherdess, from its habit of following the sheep. *Adjutant*, the nickname of the solemn Indian stork, is

clearly due to Mr Atkins, and the *secretary* bird is so named because some of his head feathers suggest a quill pen behind an ear.

The converse process of people being nicknamed from animals is also common, and the metaphor is usually pretty obvious. An interesting case is *shrew*, a libel on a very inoffensive little animal, the *shrew-mouse*, Anglo-Sax. *scrēawa*. Cooper describes *mus araneus* as "a kinde of mise called a *shrew*, which if he go over a beastes backe he shall be lame in the chyne; if he byte it swelleth to the heart and the beast dyeth." This "information" is derived from Pliny, but the superstition is found in Greek. The epithet was, up to Shakespeare's time, applied indifferently to both sexes. From *shrew* is derived *shrewd*, earlier *shrewed*,¹ the meaning of which has become much milder than when Henry VIII. said to Cranmer—

"The common voice I see is verified

• Of thee which says, 'Do my lord of Canterbury
A *shrewd* turn, and he's your friend for ever.' "

(*Henry VIII.*, v. 2.)

The title *Dauphin*, lit. dolphin, commemorates the absorption into the French monarchy, in 1349, of the lordship of Dauphiné, the cognizance of which was three dolphins.

The application of animals' names to diseases is a familiar phenomenon, e.g. *cancer* (and *canker*), crab, and *lupus*, wolf. To this class belongs *mulligrubs*, for which we find in the 17th century also *mouldy grubs*. Its oldest meaning is stomach-ache, still given in Hotten's *Slang Dictionary* (1864). *Mully* is still used in dialect for mouldy, earthy, and *grub* was once the regular word for worm. The Latin name for the same discomfort was *verminatio*, from *vermis*, a worm. For the later transition of meaning we may compare *megrims*, from Fr. *migraine*, headache, Greco-Lat. *hemicrania*, lit. half-skull, because supposed to affect one side only of the head.

A good many names of plants and animals have a religious origin. *Hollyhock* is for *holy hock*, from Anglo-Sax. *hoc*, mallow; for the pronunciation cf. *holiday*. *Halibut* means *holy butt*, the latter word being an old name for flat fish; for this form of *holy* cf. *halidom*. *Lady* in names of flowers such as *lady's bedstraw*, *lady's garter*, *lady's slipper*, is for Our Lady. So also in *ladybird*, called in French *bête à bon Dieu* and in German *Marienkäfer*, Mary's beetle. Here may be mentioned *samphire*, from Old Fr. *herbe de Saint-*

¹ For the rather illogical formation cf. *dogged* from *dog*.

Pierre, "sampire, crestmarin" (Cotgrave). The *filbert*, earlier *philibert*, is named from St Philibert, the nut being ripe by St Philibert's day (22nd Aug.). We may compare Ger. *Lambertsnuß*, filbert, originally "Lombard nut," but popularly associated with St Lambert's day (17th Sept.).

The application of baptismal names to animals is a very general practice, though the reason for the selection of the particular name is not always clear. The most famous of such names is *Reynard* the Fox. The Old French for fox is *goupil*, a derivative of Lat. *vulpes*, fox. The hero of the great beast epic of the Middle Ages is *Renard le goupil*, and the fact that *renard* has now completely supplanted *goupil* shows how popular the Renard legends must have been. *Renard* is from Old High Ger. *regin-hart*, strong in counsel; cf. our names *Reginald* and *Reynold*, and Scot. *Ronald*, of Norse origin. From the same source come *Chantecler*, lit. sing-clear, the cock, and *Partlet*, the hen, while *Bruin*, the bear, lit. "brown," is from the Dutch version of the epic. In the Low German version, *Reinke de Vos*, the ape's name is *Moneke*, a diminutive corresponding to Ital. *monicchio*, "a pugge, a munkie, an ape" (Florio), the earlier history of which is much disputed. The cat was called *Tibert* or *Theobald*—

MERCUTIO. "Tybalt, you rat-catcher, will you walk?"

TYBALT. "What wouldst thou have with me?"

MERCUTIO. "Good king of cats, nothing but one of your nine lives."

(*Romeo and Juliet*, iii. 1.)

The fact that the donkey was at one time regularly called *Cuddy* made *Cuthbert* for a long period unpopular as a baptismal name. He is now often called *Neddy*. The hare was called *Wat* (*Walter*) in Tudor times. In the *Roman de Renard* he is *Couard*, whence *coward*, a derivative of Old Fr. *coue* (*queue*), tail, from Lat. *cauda*. The idea is that of the tail between the legs, so that the name is etymologically not very appropriate to the hare. *Parrot*, for earlier *perrot*, means "little Peter." The extension *Poll parrot* is thus a kind of hermaphrodite. Fr. *pierrot* is still used for the sparrow. The family name *Perrot* is sometimes a nickname, "the chatterer," but can also mean literally "little Peter," just as *Emmot* means "little Emma," and *Marriot* "little Mary." *Petrel* is of cognate origin, with an allusion to St Peter's walking upon the sea; cf. its German name, *Sankt-Peters vogel*. Sailors call the petrel *Mother Carey's chicken*, probably a nautical corruption of some old Spanish or Italian name; but, in spite of ingenious guesses, this

lady's genealogy remains as obscure as that of Davy Jones or the Jolly Roger.

Robin has practically replaced *red-breast*. The *martin* is in French *martinet*, and the name may have been given in allusion to the southward flight of this swallow about Martinmas; but the kingfisher, not a migrant bird, is called *martin-pêcheur*, formerly also *martinet pêcheur* or *oiseau de Saint-Martin*, so that *martin* may be due to some other association. Sometimes the double name survives. We no longer say *Philip sparrow*, but *Jack ass*, *Jack daw*, *Jenny wren*, *Tom tit* (see p. 99), and the inclusive *Dicky bird*, are still familiar. With these we may compare *Hob* (i.e. Robert) *goblin*. *Madge owl*, or simply *Madge*, was once common. For *Mag pie* we find also various diminutives—

“Augurs, and understood relations, have
By *magot-pies*, and choughs, and rooks, brought forth
The secret'st man of blood.”

(*Macbeth*, iii. 4.)

Cotgrave has *pie*, “a pyc, pyannat, *meggatapie*.” In Old French it was also called *jaquette*, “a proper name for a woman; also, a piannat, or *megatapie*” (Cotgrave).

The connexion of this word, Fr. *pie*, Lat. *pica*, with the comestible *pie* is uncertain, but it seems possible that the magpie's habit of collecting miscellaneous trifles caused its name to be given to a dish of uncertain constituents. It is a curious coincidence that the obsolete *chuet* or *chewet* meant both a round pie and a jackdaw.¹ It is uncertain in which of the two senses Prince Hal applies the name to Falstaff (1 *Henry IV.*, v. 1). It comes from Fr. *chouette*, screech-owl, which formerly meant also “a chough, daw, jack-daw” (Cotgrave).

A *piebald* horse is one *balled* like a magpie. *Ball* is a Celtic word for a white mark, especially on the forehead; hence the tavern sign of the *Baldfaced Stag*. Our adjective *bald* is thus a past participle.

Things are often named from animals. *Crane*, *kite*, *donkey-engine*, *monkey-wrench*, *pig-iron*, etc., are simple cases. The *crane* picture is so striking that we are not surprised to find it literally reproduced

¹ Connexion has even been suggested between *haggis* and Fr. *agasse*, “a pie, piannet, or *magatapie*” (Cotgrave). *Haggis*, now regarded as Scottish, was once a common word in English. Palsgrave has *haggas*, a podying, “caliette (caillette) de mouton,” i.e., sheep's stomach.

THE ROMANCE OF WORDS

in many other languages. The toy called a *kite* is in French *cerf-volant*, flying stag, a name also applied to the stag-beetle, and in German *drachen*, dragon. It is natural that terrifying names should have been given to early firearms. Many of these, e.g., *basilisk*, *serpent*, *falconet*, *saker* (from Fr. *sacre*, a kind of hawk), are obsolete—

"The cannon, blunderbuss and *saker*,
He was th' inventor of and maker."

(*Hudibras*, i. 2.)

More familiar is *culverin*, Fr. *couleuvrine*, a derivative of *couleuvre*, adder, Lat. *coluber*—

"And thou hast talk'd
Of sallies and retires, of trenches, tents,
Of palisadoes, frontiers, parapets,
Of basilisks, of cannon, *culverin*."

(1 *Henry IV.*, ii. 3.)

One name for a hand-gun was *dragon*, whence our *dragoon*, originally applied to a kind of mounted infantry or carbineers. *Musket*, like *saker* (v.s.), was the name of a hawk. Mistress Ford uses it playfully to her page—

"How now, my *eyas*¹-*musket*, what news with you?"

(*Merry Wives*, iii. 3.)

But the hawk was so nicknamed from its small size. Fr. *mousquet*, now replaced in the hawk sense by *émouchet*, is from Ital. *moschetto*, a diminutive from Lat. *musca*, fly. Thus *mosquito* (Spanish) and *musket* are doublets.

Porcelain comes, through French, from Ital. *porcellana*, "a kinde of fine earth called *porcelane*, whereof they make fine china dishes, called *porcellan* dishes" (Florio). This is, however, a transferred meaning, *porcellana* being the name of a particularly glossy shell called the "Venus shell." It is a derivative of Lat. *porcus*, pig. *Easel* comes, with many other painters' terms, from Holland. It is Du. *ezel*, ass, which, like Ger. *esel*, comes from Lat. *asinus*. For its metaphorical application we may compare Fr. *chevalet*, *casel*, lit. "little horse," and Eng. *clothes-horse*.

Objects often bear the names of individuals. Such are *albert* chain, *brougham*, *victoria*, *wellington* boot. Some elderly people can

¹ For *eyas* see p. 92.

remember ladies wearing a red blouse called a *garibaldi*.¹ Sometimes an inventor is immortalized, e.g., *mackintosh* and *shrapnel*, both due to 19th-century inventors. The more recent *maxim* is named from one who, according to the late Lord Salisbury, has saved many of his fellow-men from dying of old age. Other benefactors are commemorated in *derringer*, first recorded in Bret Harte, and *bowie*, which occurs in Dickens's *American Notes*. *Sandwich* and *spencer* are coupled in an old rhyme—

“Two noble earls, whom, if I quote,
Some folks might call me sinner;
The one invented half a coat,
The other half a dinner.”

An Earl Spencer (1782-1845) made a short overcoat fashionable for some time. An Earl of Sandwich (1718-1792) invented a form of light refreshment which enabled him to take a meal without leaving the card-table. It does not appear that *Billy Cock* is to be classed with the above, or with *Chesterfield*, *Chippendale & Co.* The *New English Dictionary* quotes (from 1721) a description of the Oxford “blood” in his “*bully-cocked* hat,” worn aggressively on one side. *Pinchbeck* was a London watchmaker (*fl. c.* 1700), and *doily* is from *Doyley*, a linen-draper of the same period. Étienne de *Silhouette* was French finance-minister in 1759, but the application of his name to a black profile portrait is variously explained. *Negus* was first brewed in Queen Anne's reign by Colonel Francis Negus.

The first *orrery* was constructed by the Earl of Orrery (*c.* 1700). *Galvani* and *Volta* were Italian scientists of the 18th century. *Mesmer* was a German physician of the same period. *Nicotine* is named from Jean Nicot, French ambassador at Lisbon, who sent some tobacco-plants to Catherine de Médicis in 1560. He also compiled the first Old French dictionary. The gallows-shaped contrivance called a *derrick* perpetuates the name of a famous hangman who officiated in London about 1600. It is a Dutch name, identical with *Dietrich*, *Theodoric* and *Dirk* (Hatteraick). Conversely the Fr. *potence*, gallows, meant originally a bracket or support, Lat. *potentia*, power. The origin of *darbies*, handcuffs, is unknown, but the line—

¹ To the same period belongs the colour *magenta*, from the victory of the French over the Austrians at Magenta in 1859.

"To bind such babes in father *Derbies* bands."

(GASCOIGNE, *The Steel Glass*, 1576.)—

suggests connexion with some form of legal constraint.

Occasionally a verb is formed from a proper name. On the model of *tantalize*, from the punishment of Tantalus, we have *bowdlerize*, from *Bowdler*, who published an expurgated "family Shakespeare" in 1818; cf. *macadamize*. *Burke* and *boycott* commemorate a scoundrel and a victim. The latter word, from the treatment of Captain Boycott of Co. Mayo in 1880, seems to have supplied a want, for Fr. *boycotter* and Ger. *boycottieren* have become familiar words. *Burke* was hanged at Edinburgh in 1829 for murdering people by suffocation in order to dispose of their bodies to medical schools. We now use the verb only of "stifling" discussion, but in the Ingoldsby Legends it still has the original sense—

"But, when beat on his knees,
That confounded De Guise
Came behind with the 'fogle' that caused all this breeze,
Whipp'd it tight round his neck, and, when backward he'd jerk'd him,
The rest of the rascals jump'd on him and *Burk'd* him."
(*The Tragedy*.)

Jarvey, the slang name for a hackney coachman, especially in Ireland, was in the 18th century *Jervis* or *Jarvis*, but history is silent as to this modern *Jehu*. A *pasquinade* was originally an anonymous lampoon affixed to a statue of a gladiator which still stands in Rome. The statue is said to have been nicknamed from a scandal-loving cobbler named Pasquino. Florio has *pasquino*, "a statue in Rome on whom all libels, railings, detractions and satirical invectives are fathered." *Pamphlet* is an extended use of Old Fr. *Pamphilet*, the name of a Latin poem by one *Pamphilus* which was popular in the Middle Ages. The suffix *-et* was often used in this way, e.g., the translation of Aesop's fables by Marie de France was called *Ysopet*, and Cato's moral maxims had the title *Catonet*, or *Parvus Cato*. Modern Fr. *pamphlet*, borrowed back from English, has always the sense of polemical writing. In Eng. *libel*, lit. "little book," we see a similar restriction of meaning. A three-quarter portrait of fixed dimensions is called a *kitcat*—

"It is not easy to see why he should have chosen to produce a replica, or rather a *kitcat*." (*Journal of Education*, Oct. 1911.)

The name comes from the portraits of members of the *Kilcat* Club, painted by Kneller. *Kit* (Christopher) *Catt* or *Catlin* was a pastry-cook at whose shop the club used to dine.

Implements and domestic objects sometimes bear Christian names. We may mention spinning-*jenny*, and the innumerable meanings of *jack*. *Davit*, earlier *daviot*, is a diminutive of David. Fr. *davier*, formerly *daviet*, is used of several mechanical contrivances, including a pick-lock. A kind of davit is called in German *jülte*, a diminutive of Judith. The implement by which the burglar earns his daily bread is now called a *jemmy*, but in the 17th century we also find *bess* and *betty*. The French name is *rossignol*, nightingale. The German burglar calls it *Dietrich*, *Peterchen* or *Klaus*, and the contracted forms of the first name, *dyrk* and *dirk*, have passed into Swedish and Danish with the same meaning. In Italian a pick-lock is called *grimaldello*, a diminutive of the name Grimaldo.

A kitchen wench was once called a *malkin*—

“The kitchen *malkin* pins
Her richest lockram¹ 'bout her reechy neck,
Clamb'ring the walls to eye him.”

(*Coriolanus*, ii. 1.)

This is a diminutive of Matilda or Mary, possibly of both. *Grimalkin*, applied to a fiend in the shape of a cat, is perhaps for *gray malkin*—

“I come, *Graymalkin*.” (*Macbeth*, i. 1.)

The name *malkin* was transferred from the maid to the mop. Cotgrave has *escouillon* (*écouvillon*), “a wispe, or dish-clowt; a *maukin*, or drag, to cleanse, or sweepe an oven.” *Écouvillon* is a derivative of Lat. *scopa*, broom. Now another French word, which means both “kitchen servant” and “dish-clout,” is *souillon*, from *souiller*, to soil. What share each of these words has in Eng. *scullion* is hard to say. The only thing certain is that *scullion* is not originally related to *scullery*, Old Fr. *escuelerie*, a collective from Old Fr. *escuelle* (*écuelle*), dish, Lat. *scutella*.

A *doll* was formerly called a *baby* or *puppet*. It is the abbreviation of *Dorothy*, for we find it called a *doroty* in Scottish. We may compare Fr. *marionnette*, a double diminutive of Mary, explained by Cotgrave as “little Marian or Mal; also, a puppet.” *Little Mary*, in another sense, has been recently, but perhaps definitely, adopted

¹ For *lockram*, see p. 43.

into our language. Another old name for doll is *mammet*. Capulet uses it contemptuously to his daughter—

“And then to have a wretched puling fool,
A whining *mammet*, in her fortune’s tender,
To answer: ‘I’ll not wed,’—‘I cannot love.’”
(*Romeo and Juliet*, iii. 5.)

Its earlier form is *maumet*, meaning “idol,” and it is a contraction of Mahomet.

The derivation of *jug* is not capable of proof, but a 17th-century etymologist regards it as identical with the female name *Jug*,¹ for Joan or Jane. This is supported by the fact that *jack* was used in a similar sense—

“That there’s wrath and despair in the jolly black-*jack*,
And the seven deadly sins in a flagon of sack.”
(*Lady of the Lake*, vi. 5.)

We may also compare *toby-jug* and *demi-john*. The latter word is in French *dame-jeanne*, but both forms are possibly due to folk-etymology. A coat of mail was called in English a *jack* and in French *jaque*, “a *jack*, or coat of maile” (Cotgrave); hence the diminutive *jacket*. The German miners gave to an ore which they considered useless the name *kobalt*, from *kobold*, a goblin, gnome. This has given Eng. *cobalt*. Much later is the similarly formed *nickel*, a diminutive of Nicholas. It comes to us from Sweden, but appears earliest in the German compound *kupfernichel*, copper nickel. Apparently *nickel* here means something like goblin; cf. *Old Nick* and, probably, the *dickens*—

“I cannot tell what the *dickens* his name is my husband had him of.—
What do you call your knight’s name, sirrah?”
(*Merry Wives*, iii. 2.)

Pantaloons come, *via* France, from Venice. A great many Venetians bore the name of *Pantaleone*, one of their favourite saints. Hence the application of the name to the characteristic Venetian hose. The “lean and slippered pantaloon” was originally one of the stock characters of the old Italian comedy. Torriano has *pantalone*, “a *pantalone*, a covetous and yet amorous old dotard,

¹ *Jehannette*, “*Jug*, or *Jinny*” (Cotgrave). For strange perversions of baptismal names see Chapter XII. It is possible that the rather uncommon family name *Juggins* is of the same origin.

properly applied in comedies unto a Venetian." *Knickerbockers* take their name from Diedrich *Knickerbocker*, the pseudonym under which Washington Irving wrote his *History of Old New York*, in which the early Dutch inhabitants are depicted in baggy knee-breeches.

Certain Christian names are curiously associated with stupidity. In modern English we speak of a *silly Johnny*, while the Germans say *ein dummer Peter*, or *Michel*, and French uses *Colas* (*Nicolas*), *Nicodème* and *Claude*, the reason for the selection of the name not always being known. English has, or had, in the sense of "fool," the words *ninny*, *nickum*, *noddy*, *zany*. *Ninny* is for *Innocent*, "Innocent, *Ninny*, a proper name for a man" (Cotgrave). With this we may compare French *benêt* (i.e., Benedict), "a simple, plaine, doltish fellow; a noddy peake, a ninny hammer, a peagoose, a coxe, a silly companion" (Cotgrave). *Nickum* and *noddy* are probably for Nicodemus or Nicholas, both of which are used in French for a fool—

"'But there's another chance for you,' said Mr Boffin, smiling still. 'Do you like the name of Nicodemus? Think it over, *Nick* or *Noddy*.'" (*Our Mutual Friend*, Ch. 5.)

Noddy-peak, *ninny-hammer*, *nickumpoop*, now *nincompoop*, seem to be arbitrary elaborations. *Zany*, formerly a conjuror's assistant, is *Zanni* (see p. 114), an Italian diminutive of *Giovanni*, John. With the degeneration of *Innocent* and *Benedict* we may compare Fr. *crétin*, idiot, an Alpine patois form of *chrétien*, Christian, and Eng. *silly*, which once meant blessed, a sense preserved by its German cognate *selig*. *Dunce* is a libel on the disciples of the great medieval schoolman John Duns Scotus, born at Duns in Berwickshire.

Dandy is Scottish for Andrew, e.g., Dandie Dinmont (*Guy Mannering*). *Dago*, now usually applied to Italians, was used by the Elizabethans, in its original form *Diego*, of the Spaniards. The derivation of *guy* and *bobby* (peeler) is well known. *Jockey* is a diminutive of the north-country *Jock*, for *Jack*. The history of *jackanapes* is obscure. The earliest record of the name is in a satirical song on the unpopular William de la Pole, Duke of Suffolk, who was beheaded at sea in 1450. He is called *Jack Napes*, the allusion being apparently to his badge, an ape's clog and chain. But there also seems to be association with Naples; cf. *fustian-anapes* for Naples fustian. A poem of the 15th century mentions among our imports from Italy—

THE ROMANCE OF WORDS

"Apes and japes and marmusettes tayed."

Jilt was once a stronger epithet than at present. It is for earlier *jillet*, which is a diminutive of *Jill*, the companion of Jack. *Jill*, again, is short for *Gillian*, i.e. *Juliana*, so that *jilt* is a doublet of Shakespeare's sweetest heroine. *Termagant*, like *shrew* (p. 33), was formerly used of both sexes, e.g., by Sir John Falstaff—

"'Twas time to counterfeit, or that hot *termagant* Scot (Douglas) had paid me scot and lot too." (1 *Henry IV.*, v. 4.)

In its oldest sense of a Saracen god it regularly occurs with *Mahound* (Mahomet)—

"Marsilies fait porter un livre avant:

La lei i fut Mahum e *Tervagan*."¹

(*Chanson de Roland*, l. 610.)

Ariosto has *Trivigante*. Being introduced into the medieval drama, the name became synonymous with a stage fury—

"I would have such a fellow whipped for o'erdoing *Termagant*."

(*Hamlet*, iii. 2.)

The origin of the word is unknown, but its sense development is strangely different from that of Mahomet (p. 40).

CHAPTER IV

WORDS AND PLACES

A VERY large number of wares are named from the places from which they come. This is especially common in the case of woven fabrics, and the origin is often obvious, e.g., *arras*, *cashmere* (by folk-etymology, *kerseymere*), *damask*, *holland*. The following are perhaps not all so evident—*frieze* from *Friesland*²; *fustian*, Old Fr. *fustaine* (*futaine*), from *Fustat*, a suburb of Cairo; *muslin*, Fr. *mous-*

¹ "Marsil has a book brought forward: the law of Mahomet and *Termagant* was in it."

² Whence also *cheval de frise*, a contrivance used by the Frieslanders against cavalry. The German name is *die spanischen reiter*, explained by Ludwig as "a bar with iron-spikes; *cheval de frise*, a warlick instrument, to keep off the horse."

seline, from *Mosul* in Kurdistan; *shalloon* from *Châlons-sur-Marne*; *lawn* from *Laon*; *jean*, formerly *jane*, from *Genoa*, (Fr. *Gênes*¹); *cambric* from *Kamerijk*, the Dutch name of Cambrai (cf. the obsolete *dornick*, from the Dutch name of *Tournai*); *tartan* from the *Tartars* (properly *Tatars*), used vaguely for Orientals; *sarcenet* from the Saracens; *sendal*, ultimately from *India* (cf. Greco-Lat. *sinдон*, Indian cloth); *tabby*, Old Fr. *atabis*, from the name of a suburb of Bagdad, formerly used of a kind of silk, but now of a cat marked something like the material in question.

Brittany used to be famous for hempen fabrics, and the villages of *Locrenan* and *Daoulas* gave their names to *lockram* (see quotation from *Coriolanus*, p. 39) and *dowlas*—

Hostess. You owe me money, Sir John; and now you pick a quarrel to beguile me of it; I bought you a dozen of shirts to your back.

Falstaff. *Dowlas*, filthy *dowlas*; I have given them away to bakers' wives, and they have made bolters of them.

(1 *Henry IV.*, iii. 3.)

Duffel is a place near Antwerp—

"And let it be of *duffil* gray,
As warm a cloak as man can sell."

(WORDSWORTH, *Alice Fell.*)—

and *Worstead* is in Norfolk. Of other commodities *majolica* comes from *Majorca*, called in Spanish *Mallorca*, and in medieval Latin *Majolica*, *bronze* from *Brundisium* (Brindisi), *delf* from *Delft*, the *magnet* from *Magnesia*, the *shallot*, Fr. *échalote*, in Old French also *escalogne*, whence archaic Eng. *scallion*, from *Ascalon*; the *sardine* from *Sardinia*. A *milliner*, formerly *milaner*, dealt in goods from *Milan*. *Cravat* dates from the Thirty Years' War, in which the *Croats*, earlier *Cravats*, played a part. *Ermine* is in medieval Latin *mus Armenius*, Armenian mouse, but the name perhaps comes, through Fr. *hermine*, from Old High Ger. *harmo*, weasel. *Buncombe*, more usually *bunkum*, is the name of a county in North Carolina. To make a speech "for Buncombe" means, in American politics, to show your constituents that you are doing your best for your £1,000 a year or its American equivalent. Cf. *Billingsgate* and *Limehouse*.

¹ The form *jeans* appears to be usual in America—"His hands were thrust carelessly into the side pockets of a gray *jeans* coat."

(Meredith Nicholson, *War of the Carolinas*, Ch. 15.)

The adjective *spruce* was formerly *pruce* and meant Prussia. Todd quotes from Holinshed—

"Sir Edward Howard then admirall, and with him Sir Thomas Parre in doublets of crimsin velvett, etc., were apparelled after the fashion of Prussia or *Spruce*."

Of similar origin are *spruce-leather*, *spruce-beer* and the *spruce-fir*, of which Evelyn says—

"Those from Prussia (which we call *spruce*) and Norway are the best."

Among coins the *bezant* comes from *Byzantium*, the *florin* from *Florence* and Shylock's *ducat*, chiefly a Venetian coin, from the *ducato da Puglia*, the Duchy of Apulia, where it was first coined in the 12th century. The *dollar* is the Low Ger. *daler*, for Ger. *taler*, originally called a *Joachimstaler*, from the silver-mine of Joachims-tal, "Joachim's dale," in Bohemia. Cotgrave registers a curious Old French perversion *jocondale*, "a *daller*, a piece of money worth about 3s. sterl." Some fruits may also be mentioned, e.g., the *damson* from *Damascus*, through Old Fr. *damaisine*, "a damascene or *damsen* plum" (Cotgrave), the *currant* from *Corinth* and the *peach*, Fr. *pêche*, from Vulgar Lat. *pessica*, for *Persica*.

A *polony* was originally a *Bolonian* sausage, from *Bologna*. *Parchment*, Fr. *parchemin*, is the adjective *pergamenus*, from *Pergamus*, in Asia Minor. *Spaniel* is the Old Fr. *espagneul* (*épagneul*), lit. Spanish. We have the adjective *Moorish* in *morris*, or *morrice*, *pike*—

"He that sets up his rest to do more exploits with his mace than a *morris pike*." (*Comedy of Errors*, iv. 3.)

In *morris dance*, Fr. *danse mauresque*, the same adjective is used with something of the vagueness to be noticed in connexion with India and Turkey (p. 46). Shakespeare uses the Spanish form—

"I have seen him
Caper upright, like to a wild *morisco*,
Shaking the bloody darts as he his bells."

(2 *Henry VI.*, iii. 1.)

Other "local" dances are the *polka*, which means Polish woman, *mazurka*, woman of Mazuria, and the obsolete *polonaise*, lit. Polish, *cracovienne*, from Cracow, and *varsoviennne*, from Warsaw. The *tarantella*, like the *tarantula* spider, takes its name from Taranto, in Italy. The tune of the dance is said to have been originally em-

ployed as a cure for the lethargy caused by the bite of the spider. Florio has *tarantola*, "a serpent called an eft or an evet. Some take it to be a flye whose sting is perillous and deadly, and nothing but divers sounds of musicke can cure the patient."

The town of *Troyes* has given its name to *troy* weight. The armourers of *Bilbao*, in Spain, made swords of such perfect temper that they could be bent point to hilt. Hence Falstaff describes himself in the buck-basket as—

"Compassed, like a good *bilbo*, in the circumference of a peck, hilt to point, heel to head." (*Merry Wives*, iii. 5.)

The *Andrea Ferrara*, or Scottish broadsword, carried by Fergus M'Ivor, bears, according to some authorities, the name of an armourer of Ferrara, in Italy. According to others, *Andrea dei Ferrari* was a sword-maker at Belluno. I have heard it affirmed by a Scottish drill-sergeant that the real name of this genius was *Andrew Ferrars*,¹ and that he belonged to the same nationality as other great men.

An *argosy*, formerly also *ragusye*, was named from the Adriatic port of *Ragusa*, and a *lateen* sail is a *Latin*, i.e. Mediterranean, sail; *gamboge* is the Fr. *Cambodge*, Cambodia, and *indigo* is from Span. *indico*, Indian. Of wines, *malmsey*, chiefly remembered in connexion with George of Clarence, and *malvoisie* are doublets, from *Monemvasia* in the Morea. *Port* is named from *Oporto*, i.e. *o porto*, the harbour (cf. *le Havre*), and *sherry* (see p. 94) from *Xeres* (now *Jerez*), Lat. *Caesaris* (urbs); cf. *Saragossa*, from *Caesarea Augusta*.

But it is possible to be mistaken in connecting countries with products. *Brazil* wood is not named from the country, but *vice-versâ*. It was known as a dye-wood as early as the 12th century, and the name is found in many of the European languages. The

¹ A Scotch reviewer (*Glasgow Herald*, 13th April, 1912) corrects me here—"His name was certainly not Ferrars, but Ferrier. He was probably an Arbroath man." Some readers may remember that, after General *Todleben's* brilliant defence of Sebastopol (1854-5), *Punch* discovered a respectable ancestry for him also. In some lines commencing—

"I ken him weel, the chield was born in Fife,
The bairn of Andrew Drummond and his wife,"—

it was shown that the apparently foreign name had been conferred on the gifted child because of the agility with which he used to "*toddle ben the hoose*."

Portuguese navigators found large quantities of it in South America and named the country accordingly. They christened an island *Madeira*, timber, Lat. *materia*, for a similar reason. The *canary* comes from the Canary Islands, but its name is good Latin. The largest of these islands, *Canaria*, was so called by the Romans from the dogs found there. The *guinea-fowl* and *guinea* gold came first from the west coast of Africa, but the *guinea-pig* is a native of Brazil. The name probably came from the *Guinea-men*, or slave-ships, which regularly followed a triangular course. They sailed outward to the west coast of Africa with English goods. These they exchanged for slaves, whom they transported to the West Indies, the horrible "middle passage," and finally they sailed homeward with New World produce, including, no doubt, *guinea-pigs* brought home by sailors. The turkey is also called *guinea-fowl* in the 17th century, probably to be explained in the same way. The German name for guinea-pig, *meerschweinchen*, seems to mean little pig from over the sea.

Guinea was a vague geographical expression in the 17th century, but not so vague as India or Turkey. *Indian ink* comes from China (Fr. *encre de Chine*), and *Indian corn* from America. The names given to the *turkey* are extraordinary. We are not surprised that, as an American bird, it should be naturally connected with India; cf. West Indies, Red Indian, etc. *Turk* was in the 16th and 17th centuries a vague term for non-Christians—

"Jews, *Turks*, infidels and hereticks." (Collect for Good Friday.)—

and we find also *Turkey wheat* for maize. The following names for the turkey, given in a *Nomenclator* in eight languages, published in Germany in 1602, do not exhaust the list—

German.—*Indianisch* oder *Kalekuttisch*¹ oder *Welsch*² Hun.

Dutch.—*Calcoensche* oft *Turckische* Henne.

French.—Geline ou poule d'*Inde*, ou d'*Afrique*.

Italian.—Gallina d'*India*.

Spanish.—Pavon (peacock) de las *Indias*.

English.—Cok off *Inde*!

No doubt the turkey was confused with other birds, for we find Fr. *geline d'Inde* before the discovery of America. *D'Inde* has become *dinde*, whence a new masculine *dindon* has been formed.

¹ Calicut, not Calcutta.

² See *walnut* (p. 121).

PHONETIC ACCIDENTS

The early etymologists were fond of identifying foreign wares with place-names. They connected *diaper* with Ypres, *gingham* with Guingamp (in Brittany), *drugget* with Drogheda, and the *sedan* chair with Sedan. Such guesses are almost always wrong. The origin of *diaper* is doubtful, that of *drugget* quite unknown, and *gingham* is Malay. As far as we know at present, the *sedan* came from Italy in the 16th century, and it is there, among derivatives of Lat. *sedere*, to sit, that its origin must be sought, unless indeed the original *Sedan* was some "mute, inglorious" *Hansom*.¹

CHAPTER V

PHONETIC ACCIDENTS

THE history of a word has to be studied from the double point of view of sound and sense, or, to use more technical terms, phonetics and semantics. In the logical order of things it seems natural to deal first with the less interesting aspect, phonetics, the physical processes by which sounds are gradually transformed. Speaking generally, it may be said that phonetic changes are governed by the law of least resistance, a sound which presents difficulty being gradually and unconsciously modified by a whole community or race. With the general principles of phonetics I do not propose to deal, but a few simple examples will serve to illustrate the one great law on which this science is based.

The population of this country is educationally divided by the letter *h* into three classes, which we may describe as the confident, the anxious and the indifferent. The same division existed in imperial Rome, where educated people sounded the aspirate, which completely disappeared from the everyday language of the lower classes, the so-called Vulgar Latin, from which the Romance languages are descended, so far as their working vocabulary is concerned. The anxious class was also represented.

¹ As the *hansom* has now become of archaeological interest only, it may be recorded here that it took its name from that of its inventor—"The *Hansom's* patent (cab) is especially constructed for getting quickly over the ground" (Pulleyn's *Etymological Compendium*, 1853). *Sic transit!*

A Latin epigrammatist¹ remarks that since Arrius, prophetic name, has visited the Ionian islands, they will probably be henceforth known as the *Hionian* islands. To the disappearance of the *h*- from Vulgar Latin is due the fact that the Romance languages have no aspirate. French still writes the initial *h*- in some words by etymological reaction, e.g., *homme* for Old Fr. *ome*, and also at one time really had an aspirate in the case of words of Germanic origin, e.g., *la honte*, shame. But this *h*- is no longer sounded, although it still, by tradition, prevents elision and *liaison*, mistakes in which are regarded much in the same way as a misplaced aspirate in English. The "educated" *h*- of modern English is largely an artificial restoration; cf. the modern *hotel*-keeper with the older word *ostler* (see p. 130), or the family name *Armitage* with the restored *hermitage*.

We have dropped the *k* sound in initial *kn*, as in *knave*, still sounded in Ger. *knabe*, boy. French gets over the difficulty by inserting a vowel between the two consonants, e.g., *canif* is a Germanic word cognate with Eng. *knife*. This is a common device in French when a word of Germanic origin begins with two consonants. Cf. Fr. *dérive*, drift, Eng. *drive*; Fr. *varech*, sea-weed, Eng. *wrack*. *Harangue*, formerly *harengue*, is Old High Ger. *hring*, Eng. *ring*, the allusion being to the circle formed by the audience. Fr. *chenapan*, rogue, is Ger. *schnapphahn*, robber, lit. fowl-stealer. The *shallop* that "flitteth silken-sail'd, skimming down to Camelot," is Fr. *chaloupe*, probably identical with Du. *sloep*, sloop.

The general dislike that French has for a double consonant sound at the beginning of a word appears also in the transformation of all Latin words which begin with *sc*-, *sp*-, *st*-, e.g., *scola* > *escole* (*école*), *spongia* > *esponge* (*éponge*), *stabulum* > *estable* (*étable*). English words derived from French generally show the older form, but without the initial vowel, *school*, *sponge*, *stable*.

The above are very simple examples of sound-change. There are certain less regular changes, which appear to work in a more arbitrary fashion and bring about more picturesque results. Three of the most important of these are assimilation, dissimilation and metathesis.

¹ "Nec sibi postilla metuebant talia verba,
Cum subito adfertur nuntius horribilis,
Ionios fluctus, postquam illuc Arrius isset,
Iam non *Ionios* esse, sed *Hionios*."

(*Catullus*, 84.)

Assimilation is the tendency of a sound to imitate its neighbour. The tree called the *lime* was formerly the *line*, and earlier still the *lind*. We see the older form in *linden* and in such place-names as *Lyndhurst*, lime-wood. *Line* often occurred in such compounds as *line-bark*, *line-bast*, *line-wood*, where the second component began with a lip-consonant. The *n* became also a lip-consonant because it was easier to pronounce, and by the 17th century we generally find *lime* instead of *line*. We have a similar change in *Lombard* for Ger. *lang-bart*, long-beard, or, according to some, long-axe. For *Liverpool* we find also *Litherpool* in early records. If the reader attempts to pronounce both names rapidly, he will be able to form his own opinion as to whether it is more natural for *Liverpool* to become *Litherpool* or *vice-versâ*, a vexed question with philologists. Fr. *velin*, a derivative of Old Fr. *veel* (*veau*), calf, and *venin*, Lat. *venenum*, have given Eng. *vellum* and *venom*, the final consonant being in each case assimilated¹ to the initial labial. So also *mushroom*, Fr. *mousseron*, from *mousse*, moss.

Vulgar Lat. *circare* (from *circa*, around) gave Old Fr. *cerchier*, Eng. *search*. In modern Fr. *chercher* the initial consonant has been influenced by the medial *ch*-. The *m* of the curious word *ampersand*, variously spelt, is due to the neighbouring *p*. It is applied to the sign &. I thought it obsolete till I came across it on successive days in two contemporary writers—

“One of my mother’s chief cares was to teach me my letters, which I learnt from big A to *Ampersand* in the old hornbook at Lantrig.” (QUILLER-COUCH, *Dead Man’s Rock*, Ch. 2.)

“Tommy knew all about the work. Knew every letter in it from A to *Emperzan*.” (PETT RIDGE, *In the Wars*.)

Children used to repeat the alphabet thus—“A per se A, B per se B,” and so on to “*and per se and*.” The symbol & is an abbreviation of Lat. *et*, written &.

Dissimilation is the opposite process. The archaic word *pomander*—

“I have sold all my trumpery; not a counterfeit stone, not a riband, glass, *pomander*, brooch, . . . to keep my pack from fasting.” (*Winter’s Tale*, iv. 3.)—

¹ Apart from assimilation, there is a tendency in English to substitute *-m* for *-n*, e.g. *program* for *grogran* (see p. 58). In the family name *Hansom*, for *Hanson*, we have dissimilation of *n*.

was formerly spelt *pomeamber*. It comes from Old Fr. *pome ambre*, apple of amber, a ball of perfume once carried by the delicate. In this case one of the two lip-consonants has been dissimilated. A like change has occurred in Fr. *nappe*, cloth, from Lat. *mappa*, whence our *napkin*, *apron* (p. 92), and the family name *Napier*.

The sounds most frequently affected by dissimilation are those represented by the letters *l*, *n* and *r*. Fr. *gonfalon* is for older *gonfanon*. Chaucer uses the older form, Milton the newer—

"Ten thousand thousand ensigns high advanc'd,
Standards and *gonfalons*, 'twixt van and rear,
Stream in the air."

(*Paradise Lost*, v. 589.)

Gonfanon is of Germanic origin. It means literally "battle-flag," and the second element is cognate with Eng. *fane* or *vane* (Ger. *fahne*). Eng. *pilgrim* and Fr. *pèlerin*, from Lat. *peregrinus*, illustrate the change from *r* to *l*, while the word *frail*, an osier basket for figs, is due to a change from *l* to *r*, which goes back to Roman times. A grammarian of imperial Rome named Probus compiled, about the 3rd or 4th century A.D., a list of cautions as to mispronunciation. In this list we find "*flagellum*, non *fragellum*." In the sense of switch, twig, *fragellum* gave Old Fr. *freel*, basket made of twigs, whence Eng. *frail*, while the correct *flagellum* gave Old Fr. *fleel* (*fléau*) and Eng. *flail*. A Vulgar Lat. **mora*, mulberry, from Lat. *morus*, mulberry tree, has given Fr. *mûre*. The *r* of *berry* has brought about dissimilation in Eng. *mulberry* and Ger. *maulbeere*. *Colonel* has the spelling of Fr. *colonel*, but its pronunciation points rather to the dissimilated Spanish form *coronel*, which is common in Elizabethan English. Cotgrave has *colonel*, "a *colonell*, or *coronell*; the commander of a regiment."

The female name *Annabel* is a dissimilation of *Amabel*, whence *Mabel*. By confusion with the popular medieval name *Orable*, Lat. *orabilis*, *Annabel* has become *Arabel* or *Arabella*. Our *level* is Old Fr. *livel*, Vulgar Lat. **libellum*, for *libella*, a plummet, diminutive of *libra*, scales. Old Fr. *livel* became by dissimilation *nivel*, now *niveau*. Many conjectures have been made as to the etymology of *oriel*. It is from Old Fr. *oriol*, a recess, or sanctum, which first occurs in an Anglo-Norman poem of the 12th century on Becket. This is from a Late Latin diminutive *aulaeolum*, a small chapel or shrine, which was dissimilated into *auraeolum*.

Sometimes dissimilation leads to the disappearance of a con-

sonant, e.g., Eng. *feeble*, Fr. *faible*, represents Lat. *febilis*, lamentable, from *flere*, to weep. *Fugleman* was once *flugelman*, from Ger. *flügelmann*, wing man, i.e., a tall soldier on the wing who exaggerated the movements of musketry drill for the guidance of the rest.

Metathesis is the transposition of two sounds. A simple case is our *trouble*, Fr. *troubler*, from Lat. *turbulare*. *Maggot* is for Mid. Eng. *maddock*, a diminutive of Anglo-Sax. *matha*; cf. Ger. *made*, maggot. *Kittle*, in the phrase "kittle cattle," is identical with *tickle*; cf. Ger. *kitzeln*, to tickle. One theory for the origin of *tankard* is that it stands for **cantar*, from Lat. *cantharus*, with which it corresponds exactly in meaning; e.g., *cantharus*, "a pot, a jugge, a *tankard*" (Cooper); *cantharo*, "a *tankard* or jug that houldeth much" (Florio); *canthare*, "a great jugge, or *tankard*" (Cotgrave). The metathesis may be due to association with the name Tankard.

Wattle and *wallet* are used indifferently in Mid. English for a little bag. Shakespeare no doubt had in mind the *wattles* of a cock or turkey when he made Gonzalo speak of mountaineers—

"Dew-lapp'd like bulls, whose throats had hanging at them
Wallets of flesh."
(*Tempest*, iii. 3.)

Fr. *moustique* is for earlier *mousquite*, from Span. *mosquito*, a diminutive from Lat. *musca*, a fly. *Tinsel* is Fr. *étincelle*, spark, earlier *estincelle*, which supposes a Lat. **stincilla* for *scintilla*. The old word *anlace*, dagger, common in Mid. English and revived by Byron and Scott—

"His harp in silken scarf was slung,
And by his side an *anlace* hung."
(*Rokeby*, v. 15.)—

has provoked many guesses. Its oldest form, *anelas*, is a metathesis of the common Old Fr. *alenas*, dagger. This is formed from *alêne*, of Germanic origin, cognate with *awl*; cf. *cutlass*, Fr. *coutelas* (p. 102). *Beverage* is from Old Fr. *bevrage*, or *beuvrage*, now *breuvage*, Vulgar Lat. **biberaticum*, from *bibere*, to drink. Here, as in the case of *level* (p. 50), and *search* (p. 49), English preserves the older form. In *Martello* tower, from a fort taken by the British (1794) in *Mortella*, i.e., Myrtle Bay, Corsica, we have vowel metathesis.

It goes without saying that such linguistic phenomena are often observed in the case of children and uneducated people. Not long ago the writer was urged by a gardener to embellish his garden with a *ruskit* arch. When metathesis extends beyond one word we

have what is known as a *Spoonerism*, the original type of which is said to be—

“*Kinqueri cong* their titles take.”

We have seen (p. 50) that the letters *l*, *n*, *r* are particularly subject to dissimilation and metathesis. But we sometimes find them alternating without apparent reason. Thus *banister* is a modern form for the correct *baluster*.¹ This was not at first applied to the rail, but to the bulging colonets on which it rests. Fr. *balustre* comes, through Italian, from Greco-Lat. *balaustum*, a pomegranate flower, the shape of which resembles the supports of a balustrade. Cotgrave explains *balustres* as “*ballisters*; little, round and short pillars, ranked on the outside of cloisters, terraces, galleries, etc.” *Glamour* is a doublet of *grammar* (see p. 116), and *flounce* was formerly *frounce*, from Fr. *froncer*, now only used of “knitting” the brows—

“Till civil-suited morn appear,
Not trickt and *frounc’t* as she was wont
With the Attic boy to hunt.”

(*Penseroso*, l. 123.)

Fr. *fibustier*, whence our *fibuster*, was earlier *fribustier*, a corruption of Du. *vrijbutter*, whence directly the Eng. *freebooter*.²

All words tend in popular usage to undergo a certain amount of shrinkage. The reduction of Lat. *digitale*, from *digitus*, finger, to Fr. *dé*, thimble (little thumb) is a striking example. The strong tonic accent of English, which is usually on the first, or root, syllable, brings about a kind of telescoping which makes us very unintelligible to foreigners. This is seen in the pronunciation of names such as *Cholmondeley* and *Marjoribanks*. *Bethlehem* hospital, for lunatics, becomes *bedlam*; *Mary Magdalene*, taken as a type of tearful repentance, gives us *maudlin*, now generally used of the lachrymose stage of intoxication. *Sacristan* is contracted into *sexton*. Fr. *paralysie* becomes *palsy*, and *hydropisie* becomes *dropsy*. The fuller form of the word usually persists in the literary lan-

¹ Cf. the similar change in the family name *Banister* (p. 141).

² It may be noted here that a *buccaneer* was not originally a pirate, but a man whose business was the smoking of beef in the West Indies. The name comes from a native word *boucan*, adopted into French, and explained by Cotgrave as a “woodden-gridiron whereon the cannibals broile pieces of men, and other flesh.”

guage, or is artificially introduced at a later period, so that we get such doublets as *proctor* and *procurator*.

In the case of French words which have a prefix, this prefix is very frequently dropped in English, e.g., *raiment* for *arrayment*; while suffixes, or final syllables, often disappear, e.g., treasure *trove*, for Old Fr. *trové* (*trouvé*), or become assimilated to some familiar English ending, e.g., *parish*, Fr. *paroisse*, *skirmish*, Fr. *escarmouche*, *cartridge*, Fr. *cartouche*, *partridge*, Fr. *perdrix*. A good example of such shrinkage is the word *vamp*, part of a shoe, Old Fr. *avant-pie* (*pied*), which became Mid. Eng. *vampey*, and then lost its final syllable. We may compare *vambrace*, armour for the forearm, Fr. *avant-bras*, *vanguard*, Fr. *avant-garde*, often reduced to *van*—

“Go, charge Agrippa
Plant those that have revojted in the *van*;
That Antony may seem to spend his fury
Upon himself.”

(*Antony and Cleopatra*, iv. 6.)—

and the obsolete *vaunt-courier*, forerunner—

“You sulphurous and thought-executing fires,
Vaunt-couriers of oak-cleaving thunderbolts.”

(*Lear*, iii. 2.)

When the initial vowel is *a-*, its loss may have been helped by confusion with the indefinite article. Thus for *anatomy* we find *atomy*, for a skeleton or scarecrow figure, applied by Mistress Quickly to the constable (2 *Henry IV.*, v. 4). *Peal* is for *appeal*, call; *mend* for *amend*, *lone* for *alone*, i.e., *all one*. *Peach*, used by Falstaff—

“If I be ‘ta’en, I’ll *peach* for this.”

(1 *Henry IV.*, ii. 2.)—

is for older *appeach*, related to *impeach*. *Size*, in all its senses, is for *assize*, Fr. *assise*, with a general meaning of allowance or assessment, from Fr. *asseoir*, to put, lay. *Sizars* at Cambridge are properly students in receipt of certain allowances called *sizings*. With painter’s *size* we may compare Ital. *assisa*, “size that painters use” (Florio). We use the form *assize* in speaking of the “sitting” of the judges, but those most familiar with this tribunal speak of being tried at the ‘*sizes*. The obsolete word *cate*, on which Petruchio plays—

"For dainties are all *cates*—and therefore, Kate,
Take this of me, Kate of my consolation."

(*Taming of the Shrew*, ii. 1.)—

is for earlier *acate*, an Old French dialect form corresponding to modern Fr. *achat*, purchase. The man entrusted with purchasing was called an *acatour* or *catour* (whence the name *Cator*), later *cater*, now extended to *caterer*, like *fruiterer* for *fruiter*, *poulterer* for *poultier* and *upholsterer* for *upholdster* or *upholder*.¹

Limbeck has been squeezed out by the orthodox *alembic*—

"Memory the warder of the brain,
Shall be a fume, and the receipt of reason
A *limbeck* only."

(*Macbeth*, i. 7.)—

and *prentice* has given way to *apprentice*. *Tire* and *attire* both survive, and *maze* persists by the side of *amaze* with the special sense which I have heard a Notts collier express by *puzzle-garden* (cf. Ger. *irrgarten*). *Binnacle* is a corruption, perhaps due to association with *bin*, of earlier *bittacle*, from Lat. *habitaculum*, a little dwelling. It may have come to us through Fr. *habitacle* or Port. *bitacola*, "the *bittacle*, a frame of timber in the steerage, where the compass is placed on board a ship" (Vieyra, *Port. Dict.*, 1794). As King of Scotland, King George has a household official known as the *limner*, or painter. For *limner*² we find in the 15th century *lumner* or *luminour*, which is aphetic for *alluminour* or *enlumineur*. Cotgrave, s.v. *enlumineur de livres*, says, "we call one that coloureth, or painteth upon, paper, or parchment, an *alluminer*."

But confusion with the article is not necessary in order to bring about aphesis. It occurs regularly in the case of words beginning with *esc*, *esp*, *est*, borrowed from Old French (see p. 48). Thus we have *squire* from *escuyer* (*écuyer*), *skew* from Old Fr. *eschuer*, to dodge, "eschew," ultimately cognate with Eng. *shy*, *spice* from *espice* (*épice*), *sprite* from *esprit*, *stage* from *estage* (*étage*), etc. In some

¹ *Upholsterer* has become specialized in sense; cf. *undertaker* (of funerals) and *stationer*, properly a tradesman with a *station* or stall. *Costermonger* illustrates the converse process. It meant originally a dealer in *costards*, i.e. apples. The French costermonger has the more appropriate name of *marchand des quatre saisons*.

² English *i* sometimes occurs as an attempt at the French and Celtic *u*; cf. *brisk* from *brusque*, *periwig* (p. 59) and *whisky* (p. 58).

cases we have the fuller form also, e.g., *esquire*, *eschew*; cf. *sample* and *example*. *Fender*, whether before a fireplace or slung outside a ship, is for *defender*; *fence* is always for *defence*, either in the sense of a barrier or in allusion to the noble art of self-defence.¹ The *tender* of a ship or of a locomotive is the *attender*, and *taint* is aphetic for *attaint*, Fr. *atteinte*, touch—

“I will not poison thee with my *attaint*.”

(*Lucrece*, l. 1072.)

Puzzle was in Mid. Eng. *opposaille*, i.e., something put before one. We still speak of “a poser.”

Spital, for *hospital*, survives in *Spitalfields*, and in *Spittlegate* at Grantham and elsewhere. *Crew* is for *accrewe* (Holinshed). It meant properly a reinforcement, lit. on-growth, from Fr. *accroître*, to accrue. In *recruit*, we have a later instance of the same idea. Fr. *recrue*, recruit, from *recroître*, to grow again, is still feminine, like many other military terms which were originally abstract or collective. Cotgrave has *recrue*, “a supplie, or filling up of a defective company of souldiers, etc.” We have *possum* for *opossum*, and *coon* for *raccoon*, and this for *arrahacone*, which I find in a 16th-century record of travel; cf. American *skeeter* for *mosquito*. In these two cases we perhaps have also the deliberate intention to shorten (see p. 56), as also in the obsolete Australian *tench*, for the aphetic *tentiary*, i.e., *penitentiary*. With this we may compare *tec* for *detective*,

Drawing-room is for *withdrawing-room*, and only the final *t* of *saint* is left in *Tooley St.*, famed for its three tailors, formerly *Saint Olave Street*, and *tawdry*. This latter word is well known to be derived from *Saint Audrey's fair*. It was not originally depreciatory—

“Come, you promised me a *tawdry* lace and a pair of sweet gloves.”
(*Winter's Tale*, iv. 3.)—

¹ Our ancestors appear to have been essentially pacific. With *fence*, for *defence*, we may compare Ger. *schürmen*, to fence, from *schirm*, screen (cf. *regenschirm*, umbrella), which, passing through Italian and French, has given us *skirmish*, *scrimmage*, *scaramouch* (see p. 114), and Shakespearean *scrimer*, *fencer* (*Hamlet*, iv. 7). So also Ger. *gewehr*, weapon, is cognate with Eng. *wehr*, and means defence—

“Cet animal est très méchant;
Quand on l'attaque, il se défend.”

and the full form is recorded by Palsgrave, who has *Seynt Andries* (read *Audrie's*) *lace*, "cordon." The verb *vie* comes from Old Fr. *envier*, to challenge, Lat. *invitare*, whence the phrase *à l'envi l'un de l'autre*, "in emulation one of the other" (Cotgrave); cf. *gin* (trap), Fr. *engin*, Lat. *ingenium*. The prefix *dis* or *des* is lost in *Spencer* (see p. 131), *spite*, *splay*, *sport*, *stain*, etc.

In *drat*, formerly, 'od *rot*, *zounds* for *God's wounds*, 'sdeath, *odsbodikins*, etc., there is probably a deliberate avoidance of profanity. The same intention appears in *Gogs*—

"'Ay, by *gogs-wouns*!' quoth he; and swore so loud,
That, all amaz'd, the priest let fall the book."
(*Taming of the Shrew*, iii. 2.)

Cf. Fr. *parbleu* for *par Dieu*, and Ger. *Potz* for *Gottes*.

This English tendency to aphesis is satirized in a French song of the 14th century, intentionally written in bad French. Thus, in the line—

"Or sont il vint le tans que Glais voura vauchier."¹—

Glais is for *Anglais* and *vauchier* is for *chevauchier* (*chevaucher*), to ride on a foray. The literary language runs counter to this instinct, though Shakespeare wrote *haviour* for *behaviour* and *longing* for *belonging*, while such forms as *billiments* for *habiliments* and *sparagus* for *asparagus* are regular up to the 18th century. Children keep up the national practice when they say *member* for *remember* and *zamine* for *examine*. It is quite certain that *baccy* and *tater* would be recognized literary forms, if America had been discovered two centuries earlier or printing invented two centuries later.

Many words are shortened, not by natural and gradual shrinkage, but by deliberate laziness. The national distaste for many syllables appears in *wire* for *telegram*, the Artful Dodger's *wife* for the clumsy *pocket handkerchief*, *soccer* for *association*, and such portmanteau words as *squarson*, an individual who is at once *squire* and *parson*, or *Bakerloo* for *Baker St. and Waterloo*.

The simplest way of reducing a word is to take the first syllable and make it a symbol for the rest. Of comparatively modern formation are *pub* and *Zoo*, with which we may compare *Bart's*, for Saint Bartholomew's, *Cri*, *Pav*, "half a mo'," *bike*, and even *paj*, for *pageant*.

¹ "Now the time has come when the English will wish to ride."

This method of shortening words was very popular in the 17th century, from which period date *cit*(izen), *mob*(ile vulgus), the fickle crowd, and *pun*(digrion). We often find the fuller *mobile* used for *mob*. The origin of *pundigrion* is uncertain. It may be an illiterate attempt at Ital. *puntiglio*, which, like Fr. *pointe*, was used of a verbal quibble or fine distinction. Most of these clipped forms are easily identified, e.g., *cab*(riolet), *gent*(leman), *hack*(ney), *vet*(erinary surgeon). *Cad* is for Scot. *caddie*, errand-boy, now familiar in connexion with golf, and *caddie* is from Fr. *cadet*, younger. The word had not always the very strong meaning we now associate with it. Among *Sketches by Boz* is one entitled—

“The last Cab driver and the first Omnibus *Cad*,”—

where *cad* means conductor. On *tick*, for on *ticket*, is found in the 17th century. We may compare the more modern *biz* and *spec*. *Brig* is for *brigantine*, Ital. *brigantino*, “a kinde of pinnasse or small barke called a *brigantine*” (Florio). The original meaning is pirate ship; cf. *brigand*. *Wag* has improved in meaning. It is for older *waghalter*. Cotgrave has *baboin* (*babouin*), “a trifling, busie, or crafty knave; a crackrope, *waghalter*, etc.” The older sense survives in the phrase “to play the *wag*,” i.e. truant. For the “rope” figure we may compare Scot. *hempie*, a minx, and obsolete Ital. *cavestrolo*, a diminutive from Lat. *capistrum*, halter, explained by Florio as “a *wag*, a haltersacke.” Modern Ital. *capestro* is used in the same sense. *Crack-rope* is shortened to *crack*. Justice Shallow remembered Falstaff breaking Skogan’s head—

“When he was a *crack*, not thus high.”

(2 *Henry IV.*, iii. 2.)

Chap is for *chapman*, once in general use for a merchant and still a common family name. It is cognate with *cheap*, *chaffer* and Ger. *kaufen*, to buy, and probably comes from Lat. *caupo*, tavern-keeper. We have the Dutch form in *horse-cooper*, and also in the word *coopering*, the illicit sale of spirits by Dutch boats to North Sea fishermen.¹ *Merchant* was used by the Elizabethans in the same way as our *chap*. Thus the Countess of Auvergne calls Talbot a “riddling merchant” (1 *Henry VI.*, ii. 3). We may also compare

¹ Cf. also Dan. *Kjöbenhavn* (Copenhagen), the merchants’ haven, the numerous Swedish place-names ending in *-köping*, e.g. *Jönköping*, and our own *Chippings*, or market-towns.

Scot. *callant*, lad, from the Picard form of Fr. *chaland*, customer—

"He had seen many a braw callant, far less than Guse Gibbie, fight bravly under Montrose." (*Old Mortality*, Ch. 1.)—

and our own expression "a rum customer," reduced in America to "a rum cuss." *Hock*, for *Hochheimer*, wine from Hochheim, occurs as early as Beaumont and Fletcher, and *rum*, spirit, is for earlier *rumbullion*, of obscure origin. *Gin* is for *geneva*, a corruption of Fr. *genièvre*, Lat. *juniperus*, with the berries of which it is flavoured. The history of *grog* is more complicated. The stuff called *grogram*, earlier *grograyne*, is from Fr. *gros grain*, coarse grain. Admiral Vernon (18th century) was called by the sailors "Old Grog" from his habit of wearing *grogram* breeches. When he issued orders that the regular allowance of rum was henceforth to be diluted with water, the sailors promptly baptized the mixture with his nickname.

Sometimes the first two syllables survive. We have *navvy* for *navigator*, *brandy* for *brandywine*, from Du. *brandewyn*, lit. burnt wine, and *whisky* for *usquebaugh*, Gaelic *uisge-beatha*, water of life (cf. *eau-de-vie*), so that the literal meaning of *whisky* is very innocent. It has a doublet in the river-name *Usk*. Before the 18th century *usquebaugh* was the regular form. In the following passage the Irish variety is referred to—

"The prime is *usquebaugh*, which cannot be made anywhere in that perfection; and whereas we drink it here in *aqua vitæ* measures, it goes down there by beer-glassfuls, being more natural to the nation." (HOWELL, 1634.)

Canter is for *Canterbury* gallop, the pace of pilgrims riding to the shrine of St Thomas. John Dennis, known as Dennis the Critic, says of Pope—

"Boileau's Pegasus has all his paces. The Pegasus of Pope, like a Kentish post-horse, is always on the *Canterbury*."

(*On the Preliminaries to the Dunciad*.)

In *bugle*, for *bugle-horn*, lit. wild-ox-horn, Old Fr. *bugle*, Lat. *buculus*, a diminutive of *bos*, ox, we have perhaps rather an ellipsis, like *waterproof* (coat), than a clipped form—

"Comrades, leave me here a little, while as yet 'tis early morn:
Leave me here, and when you want me, sound upon the *bugle-horn*."
(*Locksley Hall*.)

Patter is no doubt for *paternoster*—

“Fitz-Eustace, you, with Lady Clare,
May bid your beads and *patter* prayer.”

(*Marmion*, vi. 27.)—

and the use of the word *marble* for a toy sometimes made of that stone makes it very probable that the *alley*, most precious of marbles, is short for *alabaster*.

Less frequently the final syllable is selected, e.g., *bus* for *omnibus*, *loo* for *lanterloo*, variously spelt in the 17th and 18th centuries—

“Ev’n mighty Pam,¹ that Kings and Queens o’erthrew,
And mow’d down armies in the fights of *lu*.”

(*Rape of the Lock*, iii. 62.)

Fr. *lanturelu* was originally the meaningless refrain or “*tol de rol*” of a popular song in Richelieu’s time. *Van* is for *caravan*, a Persian word, properly a company of merchants or ships travelling together, “also of late corruptly used with us for a kind of waggon to carry passengers to and from London” (Blount, *Glossographia*, 1674). *Wig* is for *periwig*, a corruption of Fr. *perruque*, of obscure origin. With the 17th century *’varsity*, for *university*, we may compare Sam Weller’s *’Tizer*, for *Morning Advertiser*.

Christian names are treated in the same way. *Alexander* gives *Alec* and *Sandy*, *Herbert*, *’Erb* or *Bert*. *Ib* (see p. 136) was once common for *Isabella*, while the modern language prefers *Bella*; *Maud* for *Matilda* is a telescoped form of Old Fr. *Maheut*, while *’Tilda* is perhaps due to unconscious aphesis, like *Denry*—

“She saved a certain amount of time every day by addressing her son as *Denry*, instead of *Edward Henry*.” (ARNOLD BENNETT, *The Card*, Ch. 1.)

Among conscious word-formations may be classed many reduplicated forms, whether rhyming, as *hurly-burly*, or alliterative, as *tiittle-tattle*, though reduplication belongs to the natural speech of children, and, in at least one case, Fr. *tante*, from *ante-ante*, Lat. *amita*, the baby word has prevailed. In a reduplicated form only one half as a rule needs to be explained. Thus *seesaw* is from *saw*, the motion suggesting two sawyers at work on a log. *Zigzag*, from

¹ The knave of clubs. The name was also given to Lord Palmerston.

French, and Ger. *zickzack* are of unknown origin. *Shilly-shally* is for *shill I, shall I?* *Namby-pamby* commemorates the poet Ambrose Philips, who was thus nicknamed by Pope and his friends. The weapon called a *snickersnee*—

“First let me say my catechism,
Which my poor mammy taught to me.
'Make haste, make haste,' says guzzling Jimmy,
While Jack pulled out his *snickersnee*.”

(THACKERAY, *Little Billee*, l. 21.)—

is of Dutch origin and means something like “cut and thrust.” It is usually mentioned in connexion with the Hollanders—

“Among other customs they have in that town, one is, that none must carry a pointed knife about him; which makes the Hollander, who is us'd to *snik* and *snee*, to leave his horn-sheath and knife a ship-board when he comes ashore.” (HOWELL, letter from Florence, 1621.)

Here the reduplication is only apparent, for the older form was to *stick* or *snee*, representing the Dutch verbs *steken*, to thrust, *snijden* or *snijen*, to cut. The initial of the first verb has been assimilated to that of the second—

“It is our countrie custome onely to *stick* or *snee*.” (GLAPTHORNE, *The Hollander*, 1640.)

Reduplication is responsible for *pickaback*, earlier *pickpack*, from *pack*, bundle. The modern form is due to popular association with *back*.

Occasionally we have what is apparently the arbitrary prefixing of a consonant, e.g., *spruce* for *pruce* (p. 44). *Dapple-gray* corresponds so exactly to Fr. *gris pommelé*, Mid. Eng. *pomeli gris*, Ger. *apfelgrau* and Ital. *pomellato*, “spotted, bespeckled, pide, *dapple-graie*, or flea-bitten, the colour of a horse” (Florio), that it is hard not to believe in an original *apple-gray*, especially as we have *daffodil* for earlier *affodil*, i.e., *asphodel*. Cotgrave has *asphodile* (*asphodèle*), “the *daffadill*, *affodill*, or *asphodill*, flower.” The playful elaboration *daffadowndilly* is as old as Spenser.

CHAPTER VI

WORDS AND MEANINGS

WE have all noticed the fantastic way in which ideas are linked together in our thoughts. One thing suggests another with which it is accidentally associated in memory, the second suggests a third, and, in the course even of a few seconds, we find that we have travelled from one subject to another so remote that it requires an effort to reconstruct the series of links which connects them. The same thing happens with words. A large number of words, despite great changes of sense, retain the fundamental meaning of the original, but in many cases this is quite lost. A truer image than that of the linked chain would be that of a sphere giving off in various directions a number of rays each of which may form the nucleus of a fresh sphere. Or we may say that at each link of the chain there is a possibility of another chain branching off in a direction of its own. In Cotgrave's time to *garble* (see p. 24) and to *canvass*, *i.e.* sift through *canvas*, meant the same thing. Yet how different is their later sense-development.

There is a word *ban*, found in Old High German and Anglo-Saxon, and meaning, as far back as it can be traced, a proclamation containing a threat, hence a command or prohibition. We have it in *banish*, to put under the *ban*. The proclamation idea survives in the *banns* of marriage and in Fr. *arrière-ban*, "a proclamation, whereby those that hold authority of the king in mesne tenure, are summoned to assemble, and serve him in his warres" (Cotgrave). This is folk-etymology for Old Fr. *arban*, Old High Ger. *hari-ban*, army summons. Slanting off from the primitive idea of proclamation is that of rule or authority. The French for outskirts is *banlieue*, properly the "circuit of a league, or thereabouts" (Cotgrave) over which the local authority extended. All public institutions within such a radius were associated with *ban*, e.g., *un four, un moulin à ban*, "a comon oven or mill whereat all men may, and every tenant and vassall must, bake, and grind" (Cotgrave). The French adjective *banal*, used in this connexion, gradually developed from the meaning of "common" that of "common-place," in which sense it is now familiar in English.¹

¹ Archaic Eng. *bannal* already existed in the technical sense.

THE ROMANCE OF WORDS

Bureau, a desk, was borrowed from French in the 17th century. In modern French it means not only the desk, but also the office itself and the authority exercised by the office. Hence our familiar *bureaucracy*, likely to become increasingly familiar. The desk was so called because covered with *bureau*, Old Fr. *burel*, "a thicke course cloath, of a brown russet, or darke mingled, colour" (Cotgrave), whence Mid. Eng. *borel*, rustic, clownish, lit. roughly clad, which occurs as late as Spenser—

"How be I am but rude and *borrel*,
Yet nearer ways I know."

(*Shepherd's Calendar*, July, l. 95.)

With this we may compare the metaphorical use of *home-spun*—

"What hempen *home-spuns* have we swaggering here,
So near the cradle of the fairy queen?"

(*Midsummer Night's Dream*, iii. 1.)

The source of Old Fr. *burel* is perhaps Lat. *burrus*, fiery, cognate with the Greek name Pyrrhus.

Romance was originally an adverb. To write in the vulgar tongue, instead of in classical Latin, was called *romanice scribere*, Old Fr. *romanz escrire*. When *romanz* became felt as a noun, it developed a "singular" *roman* or *romant*, the latter of which gave the archaic Eng. *romaunt*. The most famous of Old French romances are the epic poems called *Chansons de geste*, songs of exploits, *geste* coming from the Lat. *gesta*, deeds. Eng. *gest* or *jest* is common in the 16th and 17th centuries in the sense of act, deed, and *jest*-book meant a story-book. As the favourite story-books were merry tales, the word gradually acquired its present meaning.

A part of our Anglo-Saxon church vocabulary was supplanted by Latin or French words. Thus Anglo-Sax. *ge-bed*, prayer, was gradually expelled by Old Fr. *preiere* (*prière*), Lat. *precaria*. It has survived in *beadsman*—

"The *beadsman*, after thousand aves told,
For aye unsought-for slept among his ashes cold."

(KEATS, *Eve of St Agnes*).—

beadroll and *bead*, now applied only to the humble device employed in counting prayers.

Not only the Romance languages, but also German and Dutch,

adopted, with the Roman character, Lat. *scribere*, to write. English, on the contrary, preserved the native to *write*, i.e., to scratch (runes), giving to *scribere* only a limited sense, to *shrive*. The curious change of meaning was perhaps due to the fact that the priestly absolution was felt as having the validity of a "written" law or enactment.

The meaning which we generally give to *pudding* is comparatively modern. The older sense appears in *black pudding*, a sausage made of pig's blood. This is also the meaning of Fr. *boudin*, whence *pudding* comes. A still older meaning of both words is intestine, a sense still common in dialect. The derivation of the word is obscure, but it is probably related to Fr. *bouder*, to pout, whence *boudoir*, lit. a sulking-room.

A *hearse*, now the vehicle in which a coffin is carried, is used by Shakespeare for a coffin or tomb. Its earlier meaning is a framework to support candles, usually put round the coffin at a funeral. This framework was so named from some resemblance to a harrow,¹ Fr. *herse*, Lat. *hirpex*, *hirpic-*, a rake.

Treacle is a stock example of great change of meaning. It is used in Coverdale's Bible (1535) for the "*balm in Gilead*" of the *Authorized Version*—

"There is no more *triacle* at Galaad."² (Jeremiah, vii. 22.)

Old Fr. *triacle* is from Greco-Lat. *theriaca*, a remedy against poison or snake-bite (*thēr*, a wild beast). In Mid. English and later it was used of a sovereign remedy. It has, like *sirup* (p. 117), acquired its present meaning *via* the apothecary's shop.

A *stickler* is now a man who is fussy about small points of etiquette or procedure. In Shakespeare he is one who parts combatants—

"The dragon wing of night o'erspreads the earth,
And, *stickler*-like, the armies separates."
(*Troilus and Cressida*, v. 8.)

An earlier sense is that of seeing fair-play. The word has been

¹ This is the usual explanation. But Fr. *herse* also acquired the meaning "portcullis," the pointed bars of which were naturally likened to the blades of a harrow; and it seems possible that it is to this later sense that we owe the older English meaning of *hearse*.

² "Numquid *resina* non est in Galaad?" (*Vulgate*.)

popularly associated with the *stick*, or staff, used by the umpires in duels, and Torriano gives *stickler* as one of the meanings of *bastoniere*, a verger or mace-bearer. But it probably comes from Mid. Eng. *stighllen*, to arrange, keep order (see p. 136, n. 2).

Infantry comes, through French; from Italian. It means a collection of "infants" or juniors, so called by contrast with the proved veterans who composed the cavalry.

The *pastern* of a horse, defined by Dr Johnson as the knee, from "ignorance, madam, pure ignorance," still means in Cotgrave and Florio "shackle." Florio even recognizes a verb to *pastern*, e.g., *pastoiare*, "to fetter, to clog, to shackle, to *pastern*, to give (gyve)." It comes from Old Fr. *pasturon* (*paturon*), a derivative of *pasture*, such shackles being used to prevent grazing horses from straying. *Pester* (p. 133) is connected with it. The modern Fr. *paturon* has changed its meaning in the same way.

To *rummage* meant for the Elizabethan navigators to stow goods in a hold. A rummager was what we call a *stevedore*.¹ *Rummage* is Old Fr. *arrumage* (*arrimage*), from *arrumer*, to stow, the middle syllable of which is probably cognate with English *room*; cf. *arranger*, to put in "rank."

The Christmas *waits* were originally watchmen, Anglo-Fr. *waite*, Old Fr. *gaite*, from the Old High German form of modern Ger. *wacht*, watch. Modern French still has the verb *guetter*, to lie in wait for, and *guet*, the watch. *Minstrel* comes from an Old French derivative of Lat. *minister*, servant. Modern Fr. *ménétrier* is only used of a country fiddler who attends village weddings.

The *lumber-room* is supposed to be for *Lombard* room, i.e., the room in which pawnbrokers used to store pledged property. The Lombards introduced into this country the three balls, said to be taken from the arms of the Medici family.

Livery is correctly explained by the poet Spenser—

"What *livery* is, we by common use in England know well enough, namely, that it is allowance of horse-meat, as they commonly use the word in stabling; as, to keep horses at *livery*; the which word, I guess, is derived of *livering* or *delivering* forth their nightly food. So in great houses, the *livery* is said to be served up for all night, that is, their evening allowance for drink; and *livery* is also called the upper weed (see p. 9) which a serving-man wears; so called, as I suppose, for that it was *delivered* and taken from him at pleasure." (*View of the State of Ireland*.)

¹ A Spanish word, Lat. *stipator*, "one that stoppeth chinkes" (Cooper). It came to England in connexion with the wool trade.

This passage explains also *livery stable*.¹ Our word comes from Fr. *livrée*, the feminine past participle of *livrer*, from Lat. *liberare*, to deliver.

Pedigree was in Mid. English *pedegrew*, *petigrew*, etc. It represents Old Fr. *pie (pied) de grue*, crane's foot, from the shape of a sign used in showing lines of descent in genealogical charts. The older form survives in the family name *Pettigrew*. Here it is a nickname, like *Pettifer* (*pied de fer*), iron-foot; cf. *Sheepshanks*.

Fairy is a collective, Fr. *féerie*, its modern use being perhaps due to its occurrence in such phrases as *Faerie Queen*, i.e., Queen of Fairyland. Cf. *paynim*, used by some poets for *pagan*, but really a doublet of *paganism*, occurring in *paynim hest*, *paynim knight*, etc. The correct name for the individual fairy is *fay*, Fr. *fée*, Vulgar Lat. **fata*, connected with *fatum*, fate. This appears in Ital. *fata*, "a fairie, a witch, an enchantres, an elfe" (Florio). The *fata morgana*, the mirage sometimes seen in the Straits of Messina, is attributed to the fairy Morgana of Tasso, the Morgan le Fay of our own Arthurian legends.

Many people must have wondered at some time why the *clubs* and *spades* on cards are so called. The latter figure, it is true, bears some resemblance to a spade, but no giant of fiction is depicted with a club with a triple head. The explanation is that we have adopted the French pattern, *carreau* (see p. 128), diamond, *cœur*, heart, *pique*, pike, spear-head, *trèfle*, trefoil, clover-leaf, but have given to the two latter the names used in the Italian and Spanish pattern, which, instead of the pike and trefoil, has the sword (Ital. *spada*) and mace (Ital. *bastone*). Etymologically both *spades* are identical, the origin being Greco-Lat. *spatha*, the name of a number of blade-shaped objects; cf. the diminutive *spatula*.

Wafer, in both its senses, is related to Ger. *wabe*, honeycomb. We find Anglo-Fr. *wafre* in the sense of a thin cake, perhaps stamped with a honeycomb pattern. The cognate Fr. *gaufre* is the name of a similar cake, which not only has the honeycomb pattern, but is also largely composed of honey. Hence our verb to *goffer*, to give a cellular appearance to a frill.

The meanings of adjectives are especially subject to change. *Quaint* now conveys the idea of what is unusual, and, as early as

¹ In "livery and bait" there is pleonasm. *Bait*, connected with *bite*, is the same word as in bear-baiting and fishermen's *bait*. We have it also, via Old French, in *abet*, whence the aphetic *bet*, originally to egg on.

the 17th century, we find it explained as "strange, unknown." This is the exact opposite of its original meaning, Old Fr. *cointe*, Lat. *cognitus*; cf. *acquaint*, Old Fr. *acointier*, to make known. It is possible to trace roughly the process by which this remarkable *volte-face* has been brought about. The intermediate sense of trim or pretty is common in Shakespeare—

"For a fine, *quaint*, graceful and excellent fashion, yours is worth ten on't." (*Much Ado*, iii. 4.)

We apply *restive* to a horse that will not stand still. It means properly a horse that will not do anything else. Fr. *rétif*, Old Fr. *restif*, from *rester*, to remain, Lat. *re-stare*, has kept more of the original sense of stubbornness. Scot. *reest*, *reist*, means to stand stockstill—

"Certain it was that Shagram *reisted*, and I ken Martin thinks he saw something." (*Monastery*, Ch. 4.)

Dryden even uses *restive* in the sense of sluggish—

"So James the drowsy genius wakes
Of Britain, long entranced in charms,
Restive, and slumbering on its arms."

(*Threnodia Augustalis*.)

Reasty, used of meat that has "stood" too long, is the same word (cf. *testy*, Old Fr. *testif*, heady), and *rusty* bacon is probably folk-etymology for *reasty* bacon—

"And then came haltyng Jone,
And brought a gambone
Of bakon that was *reasty*."

(SKELTON, *Elynour Rummyng*.)

Sterling has an obscure history. It is from Old Fr. *esterlin*, a coin which etymologists of an earlier age connected with the *Easterlings*, or Hanse merchants, who formed one of the great mercantile communities of the Middle Ages; and perhaps some such association is responsible for the meaning that *sterling* has acquired; but chronology shows this traditional etymology to be impossible. We find *unus sterlingus* in a medieval Latin document of 1184, and the Old Fr. *esterlin* occurs in Wace's *Roman de Rou* (Romaunt of Rollo the Sea-king), which was written before 1175. Hence it is con-

jectured that the original coin was named from the *star* which appears on some Norman pennies.

When Horatio says—

“It is a nipping and an *eager* air.” (*Hamlet*, i. 4.)—

we are reminded that *eager* is identical with the second part of *vin-egar*, Fr. *aigre*, sour, Lat. *acer*, keen. It seems hardly possible to explain the modern sense of *nice*, which in the course of its history has traversed nearly the whole diatonic scale between “rotten” and “ripping.” In Mid. English and Old French it means foolish. Cotgrave explains it by “lither, lazic, sloathful, idle; faint, slack; dull, simple,” and Shakespeare uses it in a great variety of meanings. It is possibly derived from Lat. *nescius*, ignorant. The transition from *fond*, foolish, which survives in “*fond* hopes,” to *fond*, loving, is easy. French *fou* is used in exactly the same way. Cf. also to *dote* on, i.e., to be foolish about. *Puny* is Fr. *puîné*, from *puis né*, later born, junior, whence the *puisne* justices. Milton uses it of a minor—

“He must appear in print like a *puny* with his guardian.”
(*Ateopagitica*.)

Petty, Fr. *petit*, was similarly used for a small boy.

In some cases a complimentary adjective loses its true meaning and takes on a contemptuous or ironic sense. None of us care to be called *bland*, and to describe a man as *worthy* conveys some touch of condescension. We may compare Fr. *bonhomme*, which now means generally an old fool, and *bonne femme*, good-wife, goody. *Dapper*, the Dutch for brave (cf. Ger. *tapfer*), and *pert*, Mid. Eng. *apert*, representing in meaning Lat. *expertus*, have changed much since Milton wrote of—

“The *pert* fairies and the *dapper* elves.” (*Comus*, l. 118.)

Pert seems in fact to have acquired the meaning of its opposite *malapert*, though the older sense of brisk, sprightly, survives in dialect—

“He looks spry and *peart* for once.”
(Phillpotts, *American Prisoner*, Ch. 3.)

Smug, cognate with Ger. *schmuck*, trim, elegant, beautiful, has its original sense in Shakespeare—

"And here the *smug* and silver Trent shall run
In a new channel, fair and evenly."

(1 *Henry IV.*, iii. 1.)

The degeneration of an adjective is sometimes due to its employment for euphemistic purposes. The favourite substitute for *fat* is *stout*, properly strong,¹ dauntless, etc., cognate with Ger. *stolz*, proud. Precisely the same euphemism appears in French, e.g., "*une dame un peu forte*." *Ugly* is replaced in English by *plain* and in American by *homely*—

"She is not so handsome as these, maybe, but her *homeliness* is not actually alarming." (MAX ADELER, *Mr Skinner's Night in the Underworld*.)

In the case of this word, as in many others, the American use preserves a meaning which was once common in English. Kersey's *Dictionary* (1720) explains *homely* as "ugly, disagreeable, coarse (coarse), mean."

Change of meaning may be brought about by association. A *miniature* is a small portrait, and we even use the word as an adjective meaning small, on a reduced scale. But the true sense of *miniature* is something painted in *minium*, red lead. Florio explains *miniatura* as "a limning (see p. 54), a painting with vermilion." Such paintings were usually small, hence the later meaning. The word was first applied to the ornamental red initial capitals in manuscripts. *Vignette* still means technically in French an interlaced vine-pattern on a frontispiece.² Cotgrave has *vignettes*, "vignets; branches, or branch-like borders, or flourishes in painting, or engraving."

The degeneration in the meaning of a noun may be partly due to frequent association with disparaging adjectives. Thus *hussy*, i.e., housewife, *quean*,³ woman, *wench*, child, have absorbed such adjectives as impudent, idle, light, saucy, etc. Shakespeare uses *quean* only three times, and these three include "cozening *quean*" (*Merry Wives*, iv. 2) and "scolding *quean*" (*All's Well*, ii. 2). With

¹ Hence the use of *stout* for a "strong" beer. *Porter* was once the favourite tap of *porters*, and a mixture of stout and ale, now known as *cooper*, was especially relished by the brewery *cooper*.

² Folk-etymology for *frontispice*, Lat. *frontispicium*, front view.

³ Related to, but not identical with, *queen*.

wench, still used without any disparaging sense by country folk, we may compare Fr. *garce*, lass, and Ger. *dirne*, maid-servant, both of which are now insulting epithets, but, in the older language, could be applied to Joan of Arc and the Virgin Mary respectively. *Garce* was replaced by *fille*, which has acquired in its turn a meaning so offensive that it has now given way to *jeune fille*. *Minx*, earlier *minkes*, is probably the Low Ger. *minsk*, Ger. *mensch*, lit. human, but used also in the sense of "wench." For the consonantal change cf. *hunks*, Dan. *hundsk*, stingy, lit. doggish. These examples show that the indignant "Who are you calling a woman?" is, philologically, in all likelihood a case of intelligent anticipation.

Adjectives are affected in their turn by being regularly coupled with certain nouns. A *buxom* helpmate was once obedient, the word being cognate with Ger. *biegsam*, flexible, yielding—

"The place where thou and Death
Shall dwell at ease, and up and down unseen
Wing silently the *buxom* air."

(*Paradise Lost*, ii. 840.)

An obedient nature is "*buxom*, blithe and debonair," qualities which affect the physique and result in heartiness of aspect and a comely plumpness. An *arch* damsel is etymologically akin to an *archbishop*, both descending from the Greek prefix *archi*, from *archē*, a beginning, first cause. Shakespeare uses *arch* as a noun—

"The noble duke my master,
My worthy *arch* and patron comes to-night."

(*Lear*, ii. 1.)

Occurring chiefly in such phrases as *arch* enemy, *arch* heretic, *arch* hypocrite, *arch* rogue, it acquired a depreciatory sense, which has now become so weakened that *archness* is not altogether an unpleasing attribute. We may compare the cognate German prefix *erz*. Ludwig has, as successive entries, *ertz-dieb*, "an arch-thief, an arrant thief," and *ertz-engel*, "an arch-angel." The meaning of *arrant* is almost entirely due to association with "thief." It means lit. wandering, vagabond, so that the *arrant* thief is nearly related to the knight *errant*, and to the Justices in *eyre*, Old Fr. *eire*, Lat. *iter*, a way, journey. Fr. *errer*, to wander, stray, is compounded of Vulgar Lat. *iterare*, to journey, and Lat. *errare*, to stray, and it

would be difficult to calculate how much of each enters into the composition of *le Juif errant*.

As I have suggested above, association accounts to some extent for changes of meaning, but the process is in reality more complex, and usually a number of factors are working together or in opposition to each other. A low word may gradually acquire right of citizenship. "That article blackguardly called *pluck*" (Scott) is now much respected. It is the same word as *pluck*, the heart, liver and lungs of an animal—

"During the Crimean war, *plucky*, signifying courageous, seemed likely to become a favourite term in Mayfair, even among the ladies." (HOTTEN'S *Slang Dictionary*, 1864.)

Having become respectable, it is now replaced in sporting circles by the more emphatic *guts*, which reproduces the original metaphor. A word may die out in its general sense, surviving only in some special meaning. Thus the poetic *sward*, scarcely used except with "green," meant originally the skin or crust of anything. It is cognate with Ger. *schwarte*, "the *sward*, or rind, of a thing" (Ludwig), which now means especially bacon-rind. Related words may meet with very different fates in kindred languages. Eng. *knight* is cognate with Ger. *knecht*, servant, which had, in Mid. High German, a wide range of meanings, including "warrior, hero." There is no more complimentary epithet than *knightly*, while Ger. *knechtisch* means servile.

The degeneration of words like *boor*,¹ *churl*, farmer, is a familiar phenomenon (cf. *villain*, p. 120). The same thing has happened to *blackguard*, the modern meaning of which bears hardly on a humble but useful class. The name *black guard* was given collectively to the kitchen detachment of a great man's retinue. The *scavenger* has also come down in the world, rather an unusual phenomenon in the case of official titles. The medieval *scavenger*² was an important official who seems to have been originally a kind of inspector of customs. He was called in Anglo-French *scawageour*, from the noun *scawage*, showing. The Old French dialect verb *escauver* is of Germanic origin and cognate with Eng. *show* and

¹ The older meaning of *boor* survives in the compound *neighbour*, i.e., *nigh boor*, the farmer near at hand. Du. *boer* is of course the same word.

² English regularly inserts *n* in words thus formed; cf. *harbinger*, *messenger*, *passenger*, *pottinger*, etc.

WORDS AND MEANINGS

Ger. *schauen*, to look. The *cheater*, now usually *cheat*, probably deserved his fate. The *escheators* looked after *escheats*, i.e., estates or property that lapsed and were forfeited. The origin of the word is Old Fr. *escheoir* (*échoir*), to fall due, Vulgar Lat. *ex* and *cadere*. Their reputation was unsavoury, and *cheat* has already its present meaning in Shakespeare. He also plays on the double meaning—

“I will be *cheater* to them both, and they shall be *exchequers* to me.”
(*Merry Wives*, i. 3.)

Beldam implies “hag” as early as Shakespeare, but he also uses it in its proper sense of “grandmother,” e.g., Hotspur refers to “old *beldam* earth” and “our *grandam* earth” in the same speech (1 *Henry IV.*, iii. 1), and Milton speaks of “*beldam* nature”—

“Then sing of secret things that came to pass,
When *Beldam* Nature in her cradle was.”
(*Vacation Exercise*, l. 46.)

It is of course from *belle-dame*, used in Mid. English for grandmother, as *belsire* was for grandfather. Hence it is a doublet of *belladonna*. The masculine *belsire* survives as a family name, *Belcher*¹; and to Jim Belcher, most gentlemanly of prize-fighters, we owe the *belcher* handkerchief, which had large white spots with a dark blue dot in the centre of each on a medium blue ground. It was also known to the “fancy” as a “bird’s-eye wipe.”

¹ Other forms of the same name are *Bowser* and *Bewsher*. The form *Belcher* is Picard—

“On assomma la pauvre bête.
Un manant lui coupa le pied droit et la tête.
Le seigneur du village à sa porte les mit;
Et ce dicton picard à l’entour fut écrit:
‘*Biaux chires* leups, n’écoutez mie
Mère tenchent (grondant) chen fieux (son fils) qui crie.’ ”
(LA FONTAINE, *Fables*, iv. 16.)

CHAPTER VII

SEMANTICS

THE convenient name semantics has been applied of late to the science of meanings, as distinguished from phonetics, the science of sound. The comparative study of languages enables us to observe and codify some of the laws which govern sense-development and to understand why meanings become extended or restricted. One phenomenon which seems to occur normally in language results from what we may call the simplicity of the olden times. Thus the whole vocabulary which is etymologically related to *writing* and *books* has developed from an old Germanic verb that means to *scratch* and the Germanic name for the *beech*. Our earliest books were wooden tablets on which inscriptions were scratched. The word *book* itself comes from Anglo-Sax. *bōc*, beech; cf. Ger. *buchstabe*, letter, lit. beech-stave. Lat. *liber*, book, whence a large family of words in the Romance languages, means the inner bark of a tree, and *bible* is ultimately from Greek *byblos*, the inner rind of the *papyrus*, the Egyptian rush from which *paper* was made.¹

The earliest measurements were calculated from the human body. All European languages use the *foot*, and we still measure horses by *hands*, while *span* survives in table-books. *Cubit* is Latin for *elbow*, the first part of which is the same as *ell*, cognate with Lat. *ulna*, also used in both senses. Fr. *brasse*, fathom, is Lat. *brachia*, the two arms, and *pouce*, thumb, also means inch. A further set of measures are represented by simple devices: a *yard*² is a small "stick," and the *rod*, *pole* or *perch* (cf. *perch* for birds, Fr. *perche*, pole) which gives charm to our arithmetic is a larger one. A *furlong* is a

¹ Parchment (see p. 44) was invented as a substitute when the supply of papyrus failed.

² The "stick" meaning survives in the *yards* of a ship. *Yard* was once the general word for rod, wand. Thus the "cheating *yardwand*" of Tennyson's "smooth-faced snub-nosed rogue" (*Maud*, I. i. 16) is a pleonasm of the same type as *salt-cellar* (p. 109). *Yard*, an enclosure, is a separate word, related to *garden*. The doublet *garth*, used in the Eastern counties, is of Scandinavian origin—

"I climb'd to the top of the *garth*, and stood by the road at the gate."

(TENNYSON, *The Grandmother*, l. 38.)

furrow-long. For weights common objects were used, e.g., a *grain* or a *scruple*, Lat. *scrupulus*, "a little sharpe stone falling sometime into a man's shooe" (Cooper), for very small things, a *stone* for heavier goods. Gk. *drachma*, whence our *dram*, means a handful. Our decimal system is due to our possession of ten *digits*, or fingers, and *calculation* comes from Lat. *calculus*, a pebble.

A modern Chancellor of the Exchequer, considering his budget, is not so near the reality of things as his medieval predecessor, who literally sat in his counting-house, counting up his money. For the *exchequer*, named from the Old Fr. *eschequier* (*échiquier*), chess-board, was once the board marked out in squares on which the treasurer reckoned up with counters the king's taxes. This Old Fr. *eschequier*, which has also given *chequer*, is a derivative of Old Fr. *eschec* (*échec*), check. Thus "*check trousers*" and a "*chequered career*" are both directly related to an Eastern potentate (see *chess*, p. 95). The *chancellor* himself was originally a kind of door-keeper in charge of a *chancel*, a latticed barrier which we now know in church architecture only. *Chancel* is derived, through Old Fr. *chancel* or *cancel*, from Lat. *cancellus*, a cross-bar, occurring more usually in the plural in the sense of lattice, grating. We still *cancel* a document by drawing such a pattern on it. In German *cancellus* has given *kanzel*, pulpit. The *budget*, now a document in which millions are mere items, was the chancellor's little bag or purse—

"If tinkers may have leave to live,
And bear the sow-skin *budget*,
Then my account I well may give,
And in the stocks avouch it."

(*Winter's Tale*, iv. 2.)

Old Fr. *bougette*, from which it is borrowed, is a diminutive of *bouge*, a leathern bag, which comes from Lat. *bulga*, "a male or *bouget* of leather; a purse; a bagge" (Cooper). Modern French has borrowed back our *budget*, together with several other words dealing with business and finance.

Among the most important servants of the exchequer were the *controllers*. We now call them officially *comptroller*, through a mistaken association with Fr. *compte*, account. The controller had charge of the *counter-rolls* (cf. *counterfoil*), from Old Fr. *contre-rolle*, "the copy of a role (of accounts, etc.), a parallel of the same quality and content, with the original" (Cotgrave). In French

contrôle has preserved the sense of supervision or verification which it has lost in ordinary English.

A very ancient functionary of the exchequer, the tally-cutter, was abolished in the reign of George III. *Tallies* (Fr. *tailler*, to cut) were sticks "scored" across in such a way that the notches could be compared for purposes of verification. Jack Cade preferred those good old ways—

"Our fore-fathers had no other books but the *score* and the *tally*; thou hast caused books to be used." (2 *Henry VI.*, iv. 7.)

This rudimentary method of calculation was still in use in the Kentish hop-gardens within fairly recent times; and some of us can remember very old gentlemen asking us, after a cricket-match, how many "notches" we had "scored"—

"The *scorers* were prepared to *notch* the runs." (*Pickwick*, Ch. 7.)

The use of *score*, for a reckoning in general, or for twenty, occurs in Anglo-Saxon, but the word is Scandinavian. The words *score* and *tally*, originally of identical meaning, were soon differentiated, a common phenomenon in such cases. For the exchequer *tally* was substituted an "indented cheque receipt." An *indenture*, chiefly familiar to us in connexion with apprenticeship, was a duplicate document of which the "indented" or toothed edges had to correspond like the notches of the score or tally. *Cheque*, earlier *check*, is identical with *check*, rebuff. The metaphor is from the game of chess (see p. 95), to *check* a man's accounts involving a sort of control, or pulling up short, if necessary. A *cheque* is a method of payment which makes "checking" easy. The modern spelling is due to popular association with *exchequer*, which is etymologically right, though the words have reached their modern functions by very different paths.

The development of the meaning of *chancellor* can be paralleled in the case of many other functionaries, once humble but now important. The titles of two great medieval officers, the *constable* and the *marshal*, mean the same thing. *Constable*, Old Fr. *conestable* (*sonnétable*), is Lat. *comes stabuli*, stable fellow. *Marshal*, the first element of which is cognate with *mare*, while the second corresponds to modern Ger. *schalk*, rascal, expresses the same idea in German. Both *constable* and *marshal* are now used of very high positions, but Policeman X. and the *farrier-marshal*, or shoeing-

smith, of a troop of cavalry, remind them of the base degrees by which they did ascend. The *Marshalsea* where Little Dorrit lived is for *marshalsy*, marshals' office, etc. The *steward*, or *sty-ward*, looked after his master's pigs. He rose in importance until, by the marriage of Marjorie Bruce to Walter the *Stewart* of Scotland, he founded the most picturesque of royal houses. The *chamberlain*, as his name suggests, attended to the royal comforts long before he became a judge of wholesome literature.

All these names now stand for a great number of functions of varying importance. Other titles which are equally vague are *sergeant* (see p. 118) and *usher*, Old Fr. *uissier*¹ (*huissier*), lit. door keeper, Lat. *ostiarius*, a porter. Another official was the *harbinger*, who survives only in poetry. He was a forerunner, or vauntcourier, who preceded the great man to secure him "harbourage" for the night, and his name comes from Old Fr. *herberger* (*héberger*), to shelter (see p. 130). As late as the reign of Charles II. we read that—

"On the removal of the court to pass the summer at Winchester, Bishop Ken's house, which he held in the right of his prebend, was marked by the *harbinger* for the use of Mrs Eleanor Gwyn; but he refused to grant her admittance, and she was forced to seek for lodgings in another place." (HAWKINS, *Life of Bishop Ken*.)

One of the most interesting branches of semantics, and the most useful to the etymologist, deals with the study of parallel metaphors in different languages. We have seen (p. 29) how, for instance, the names of flowers show that the same likeness has been observed by various races. The spice called *clove* and the *clove*-pink both belong to Lat. *clavus*, a nail. The German for pink is *nelke*, a Low German diminutive, *nail-kin*, of *nagel*, nail. The spice, or *gewürznelke*, is called in South Germany *nägele*, little nail. A *clove* of garlic is quite a separate word; but, as it has some interesting cognates, it may be mentioned here. It is so called because the bulb *cleaves* naturally into segments.² The German name is *knob-*

¹ As Old Fr. *uissier* has given *usher*, I would suggest that the family names *Lush* and *Lusher*, which Bardsley (*Dict. of English Surnames*) gives up, are for Old Fr. *l'uis* (cf. *Laporte*) and *l'uissier*. In modern French *Lhuissier* is not an uncommon name.

² The *onion*, Fr. *oignon*, Lat. *unio*, *union-*, is so named because successive skins form an harmonious one-ness. It is a doublet of *union*.

lauch, for Mid. High Ger. *klobelouch*, clove-leek, by dissimilation of one *l*. The Dutch doublet is *kloof*, a chasm, gully, familiar in South Africa.

Fr. *poison*, Lat. *potio*, *potion*-, a drink, and Ger. *gift*, poison, lit. gift, seem to date from treacherous times. On the other hand, Ger. *geschenk*, a present, means something poured out (see *nuncheon*, p. 100), while a tip is in French *pourboire* and in German *trinkgeld*, even when accepted by a lifelong abstainer. In English we "ride a hobby," i.e., a hobby-horse, or wooden horse. German has the same metaphor, "ein steckenpferd reiten," and French says "enfourcher un dada," i.e., to bestride a gee-gee. *Hobby*, for Mid. Eng. *hobin*, a nag, was a proper name for a horse. Like *Dobbin* and *Robin*, it belongs to the numerous progeny of Robert.

In some cases the reason for a metaphor is not quite clear to the modern mind. The bloodthirsty weasel is called in French *belette*,¹ little beauty, in Italian *donnola*, in Portuguese *doninha*, little lady, in Spanish *comadreja*, gossip (Fr. *commère*, Scot. *cummer*, p. 78), in Bavarian *schöntierlein*, beautiful little animal, in Danish *kjønne*, beautiful, and in older English *fairy*.² From Lat. *medius* we get *mediastinus*, "a drudge (drudge) or lubber to do all vile service in the house; a kitching slave" (Cooper). Why this drudge should have a name implying a middle position I cannot say; but to-day in the North of England a maid-of-all-work is called a *tweeny* (between-maid).

A stock semantic parallel occurs in the relation between age and respectability. All of us, as soon as we get to reasonable maturity, lay great stress on the importance of deference to "elders." It follows naturally that many titles of more or less dignity should be evolved from the idea of seniority. The Eng. *alderman* is obvious. *Priest* and Old Fr. *prestre*³ (*prêtre*), from Gk. *presbyteros*, comparative of *presbys*, old, are not so obvious. In the Romance languages we have a whole group of words, e.g., Fr. *sire*, *sieur*, *seigneur*, Ital. *signor*, Span. *señor*, with their compounds *monsieur*, *messer*, etc., all representing either *senior* or *seniorem*. Ger. *eltern*,

¹ Perhaps a diminutive of Cymric *bele*, marten, but felt as from Fr. *belle*.

² Dozens of similar names for the weasel could be collected from the European languages and dialects. It is probable that these complimentary names were propitiatory, the weasel being an animal regarded with superstitious dread.

³ Cf. *Priester* John, the fabulous priest-monarch of Ethiopia.

parents, is the plural comparative of *alt*, old, and the first element of *seneschal* (see *marshal*, p. 74) is cognate with Lat. *senex*. From Fr. *sire* comes Eng. *sir*, and from this was formed the adjective *sirly*,¹ now spelt *surlly*, which in Shakespeare still means haughty, arrogant—

"See how the *surlly* Warwick mans the wall."

(3 *Henry VI.*, v. 1.)

A *list*, in the sense of enumeration, is a "strip." The cognate German word is *leiste*, border. We have the original meaning in "*list* slippers." Fr. *bordereau*, a list, which became very familiar in connexion with the Dreyfus case, is a diminutive of *bord*, edge. *Label* is the same word as Old Fr. *lambel* (*lambeau*), rag. *Scroll* is an alteration, perhaps due to *roll*, of Mid. Eng. *scrow* or *escrow*, from Old Fr. *escroue*,² rag, shred. *Docket*, earlier *dogget*, is from an old Italian diminutive of *doga*, cask-stave, which meant a bendlet in heraldry. *Schedule* is a diminutive of Lat. *scheda*, "a scrowe" (Cooper), properly a strip of papyrus. Ger. *zettel*, bill, ticket, is the same word. Thus all these words, more or less kindred in meaning, can be reduced to the primitive notion of strip or scrap.

Farce, from French, means stuffing. The verb to *farce*, which represents Lat. *farcire*, survives in the perverted *force-meat*. A parallel is *satire*, from Lat. *satura* (*lanx*), a full dish, hence a medley. Somewhat similar is the modern meaning of *magazine*, a "store-house" of amusement or information.

The closest form of intimacy is represented by community of board and lodging, or, in older phraseology, "bed and board." *Companion*, with its related words, belongs to Vulgar Lat. **com-panio*, *companion*-, bread-sharer. The same idea is represented by the pleonastic Eng. *messmate*, the second part of which, *mate*, is related to *meat*. *Mess*, food, Old Fr. *mes* (*mets*), Lat. *missum*, is in modern English only military or naval, but was once the usual name for a dish of food—

"Herbs and other country *messes*

Which the neat-handed Phillis dresses."

(*Allegro*, l. 85.)

With *mate* we may compare Fr. *matelot*, earlier *matenot*, representing

¹ Cf. *lordly*, *princely*, etc., and Ger. *herrisch*, imperious, from *Herr*, sir.

² Modern Fr. *écrou* is used only in the sense of prison register.

Du. *maat*, meat, and *genoot*, a companion. The latter word is cognate with Ger. *genosse*, a companion, from *geniessen*, to enjoy or use together. In early Dutch we find also *mattegenoet*, through popular association with *matte*, hammock, one hammock serving, by a Box and Cox arrangement, for two sailors.

Comrade is from Fr. *camarade*, and this from Span. *camarada*, originally a "room-full," called in the French army *une chambre*. This corresponds to Ger. *geselle*, comrade, from *saal*, room. The reduction of the collective to the individual is paralleled by Ger. *bursche*, fellow, from Mid. High Ger. *burse*, college hostel; cf. *frauenzimmer*, wench, lit. women's room. It can hardly be doubted that *chum* is a corrupted clip from *chamber-fellow*.¹ It is thus explained in a *Dictionary of the Canting Crew* (1690), within a few years of its earliest recorded occurrence, and the reader will remember Mr Pickwick's introduction to the *chummage* system in the Fleet (Ch. 42).

English *gossip*, earlier *god-sib*, related in God, a sponsor, soon developed the subsidiary meanings of boon companion, crony, tippler, babbler, etc., all of which are represented in Shakespeare. The case of Fr. *compère* and *commère*, godfather and godmother, is similar. Cotgrave explains *commérage* as "gossiping; the acquaintance, affinity, or league that growes betweene women by christning a child together, or one for another." Ger. *gevatter*, godfather, has also acquired the sense of Fr. *bonhomme* (p. 67), Eng. *daddy*. From *commère* comes Scot. *cummer* or *kimmer*—

"A canty quean was Kate, and a special *cummer* of my ain."
(*Monastery*, Ch. 8.)

¹ The vowel is not so great a difficulty as it might appear, and we actually have the same change in *comrade* itself, formerly pronounced *cunrade*. In the London pronunciation the *u* of such words as *but*, *cup*, *hurry*, etc., represents roughly a continental short *a*. This fact, familiar to phoneticians but disbelieved by others, is one of the first peculiarities noted by foreigners beginning to learn English. It is quite possible that *chum* is an accidental spelling for **cham*, just as we write *bungalow* for *bangla* (Bengal), *pundit* for *pandit*, and *Punjab* for *Panjab*, five rivers, whence also probably the liquid called *punch*, from its five ingredients. Cf. also American to *slug*, i.e. to *slog*, which appears to represent Du. *slag*, blow—"That was for *slugging* the guard" (Kipling, *An Error in the Fourth Dimension*)—and the adjective *bluff*, from obsolete Du. *blaf*, broad-faced.

While christenings led to cheerful garrulity, the wilder fun of weddings has given the Fr. *faire la noce*, to go on the spree. In Ger. *hochzeit*, wedding, lit. high time, we have a converse development of meaning.

Parallel sense-development in different languages sometimes gives us a glimpse of the life of our ancestors. Our verb to *curry* (leather) comes from Old Fr. *corr  r*¹ (*courroyer*), to make ready, put in order, which represents a theoretical **con-red-are*, the root syllable of which is Germanic and cognate with our *ready*. Ger. *gerben*, to tan, Old High Ger. *garawen*, to make ready, is a derivative of *gar*, ready, complete, now used only as an adverb meaning "quite," but cognate with our *yare*—

"Our ship—
Which, but three glasses since, we gave out split—
Is tight, and *yare*, and bravely rigg'd."
(*Tempest*, v. i.)

Both *curry* and *gerben* must have acquired their restricted meaning at a time when there was literally nothing like leather.

Even in slang we find the same parallelism exemplified. We call an old-fashioned watch a *turnip*. In German it is called *zwiebel*, onion, and in French *oignon*. Eng. *greenhorn* likens an inexperienced person to an animal whose horns have just begun to sprout. In Ger. *gelbschnabel*, yellow-bill, and Fr. *bec-jaune*, we have the metaphor of the fledgling. Ludwig explains *gelbschnabel* by "chitty-face," *chit*, cognate with *kit*-ten, being a general term in Mid. English for a young animal. From *bec-jaune* we have archaic Scot. *beejam*, university freshman. Cotgrave spells the French word *bejaune*, and gives, as he usually does for such words,² a very full gloss, which happens, by exception, to be quotable—

"A novice; a late prentice to, or young beginner in, a trade, or art; also, a simple, ignorant, unexperienced, asse; a rude, unfashioned,

¹ *Array*, Old Fr. *arr  r*, is related.

² This is a characteristic of the old dictionary makers. The gem of my collection is Ludwig's gloss for *l  mmel*, "a long lubber, a lazy lubber, a slouch, a lordant, a lordane, a looby, a booby, a tony, a fop, a dunce, a simpleton, a wise-acre, a sot, a logger-head, a block-head, a nickampoop, a lingerer, a drowsy or dreaming lush, a pill-garlick, a slowback, a lath-back, a pitiful sneaking fellow, a lungis, a tall slim fellow, a slim long-back, a great he-fellow, a lubberly fellow, a lozel, an awkward fellow."

home-bred hoydon; a sot, ninny, dolt, noddy; one that's blankt, and hath nought to say, when he hath most need to speake."

The Englishman intimates that a thing has ceased to please by saying that he is "fed up" with it. The Frenchman says, "J'en ai soupe." Both these metaphors are quite modern, but they express in flippant form the same figure of physical satiety which is as old as language. *Padding* is a comparatively new word in connexion with literary composition, but it reproduces, with a slightly different meaning, the figure expressed by *bombast*, lit. wadding, a derivative of Greco-Lat. *bombyx*, originally "silk-worm," whence also *bombasine*. We may compare also "*fustian* eloquence"—

"And he, whose *fustian's* so sublimely bad,
It is not poetry, but prose run mad."

(POPE, *Prologue to the Satires*, l. 187.)

And a very similar image is found in the Latin poet Ausonius—

"At nos illepidum, rudem, libellum,
Burras, quisquiliæ ineptiasque
Credemus gremio cui fovendum?"

(*Drepanio Filio*.)

Even to "take the cake" is paralleled by the Gk. *labein ton pyramounta*, to be awarded the cake of roasted wheat and honey which was originally the prize for him who best kept awake during a night-watch.

In the proverbial expressions which contain the concentrated wisdom of the ages we sometimes find exact correspondences. Thus "to look a gift-horse in the mouth" is literally reproduced in French and German. Sometimes the symbols vary, e.g., the risk one is exposed to in acquiring goods without examination is called by us "buying a pig in a poke."¹ French and German substitute the cat. We say that "a cat may look at a king." The French *dramatis personæ* are a dog and a bishop. The "bird in hand" which we regard as the equivalent of "two in the bush" is in German compared advantageously with ten on the roof.

Every language has an immense number of metaphors to describe the various stages of intoxication. We, as a seafaring nation, have naturally a set of such metaphors taken from

¹ *Poke*, sack, is still common in dialect, e.g., in the Kentish hop-gardens. It is a doublet of *pouch*, and its diminutive is *pocket*.

nautical English. In French and German the state of being "half-seas over" or "three sheets in the wind," and the practice of "splicing the main-brace" are expressed by various land metaphors. But the more obvious nautical figures are common property. We speak of being *stranded*; French says "*échouer* (to run ashore) dans une entreprise," and German uses *scheitern*, to strand, split on a rock, in the same way.

Finally, we observe the same principle in euphemism, or that form of speech which avoids calling things by their names. Euphemism is the result of various human instincts which range from religious reverence down to common decency. There is, however, a special type of euphemism which may be described as the delicacy of the partially educated. It is a matter of common observation that for educated people a spade is a spade, while the more outspoken class prefers to call it a decorated shovel. Between these two classes come those delicate beings whose work in life is—

"le retranchement de ces syllabes sales
Qui dans les plus beaux mots produisent des scandales;
Ces jouets éternels des sots de tous les temps;
Ces fades lieux-communs de nos méchants plaisants;
Ces sources d'un amas d'équivoques infâmes,
Dont on vient faire insulte à la pudeur des femmes."

(MOLIÈRE, *Les Femmes savantes*, iii. 2.)

In the United States refined society has succeeded in banning as improper the word *leg*, which must now be replaced by *limb*, even when the possessor is a boiled fowl, and this refinement is not unknown in England. The coloured ladies of Barbados appear to have been equally sensitive—

"Fate had placed me opposite to a fine turkey. I asked my partner if I should have the pleasure of helping her to a piece of the breast. She looked at me indignantly, and said, 'Curse your impudence, sar; I wonder where you larn manners. Sar, I take a lilly turkey *bosom*, if you please.' " (*Peter Simple*, Ch. 31.)

This tendency shows itself especially in connexion with the more intimate garments and articles intended for personal use. We have the absurd name *pocket handkerchief*, i.e., pocket hand-cover-head, for a comparatively modern convenience, the earlier names of which have more of the directness of the Artful Dodger's "wipe." Ben Jonson calls it a *muckinder*. In 1829 the use of the word *mouchoir* in

a French adaptation of *Othello* caused a riot at the Comédie Française. History repeats itself, for, in 1907, a play by J. M. Synge was produced in Dublin, but—

"The audience broke up in disorder at the word *shift*."

(Academy, 14th Oct. 1911.)

This is all the more ludicrous when we reflect that *shift*, i.e., change of raiment, is itself an early euphemism for *smock*: cf. Ital. *mutande*, "thinne under-breeches" (Florio), from a country and century not usually regarded as prudish. The fact is that, just as the low word, when once accepted, loses its primitive vigour (see *pluck*, p. 70), the euphemism is, by inevitable association, doomed from its very birth.

I will now give a few examples of the way in which the study of semantics helps the etymologist. The *antlers* of a deer are properly the lowest branches of the horns, what we now call brow-antlers. The word comes from Old Fr. *antoilliers*, which answers phonctically to a conjectured Vulgar Lat. **ante-oculares*, from *oculus*, eye. This conjecture is confirmed by the Ger. *augensprosse*, brow-antler, lit. eye-sprout.

Eng. *plover*, from Fr. *pluvier*, could come from a Vulgar Lat. **pluviarius*, belonging to rain. The German name *regenpfeifer*, lit. rain-piper, shows this to be correct. It does not matter, etymologically, whether the bird really has any connexion with rain, for rustic observation, interesting as it is, is essentially unscientific. The *honeysuckle* is useless to the bee. The *slow-worm*, which appears to be for *slay-worm*, strike-serpent,¹ is perfectly harmless, and the toad, though ugly, is not venomous, nor does he bear a jewel in his head.

Kestrel, a kind of hawk, represents Old Fr. *quercerelle* (*crécerelle*), "a kastrell" (Cotgrave). *Crécerelle* is a diminutive of *crécelle*, a rattle, used in Old French especially of the leper's rattle or clapper, with which he warned people away from his neighbourhood. It is connected with Lat. *crepare*, to resound. The Latin name for the kestrel is *tinnunculus*, lit. a little ringer, derived from the verb *tinnire*, to clink, jingle, "tintinnabulate." Cooper tells us that "they use to set them (kestrels) in pigeon houses, to make doves to love the place, bicause they feare away other haukes with their

¹ The meaning of *worm* has degenerated since the days of the *Lindwurm*, the dragon slain by Siegfried. The Norse form survives in *Great Orme's Head*, the dragon's head.

ringing voyce." This information is obtained from the Latin agriculturist Columella. This parallel makes it clear that Fr. *crécerelle*, kestrel, is a metaphorical application of the same word, meaning a leper's "clicket."

The curious word *akimbo* occurs first in Mid. English in the form *in kenebowe*. In half-a-dozen languages we find this attitude expressed by the figure of a jug-handle, or, as it used to be called, a pot-ear. The oldest equivalent is Lat. *ansatus*, used by Plautus, from *ansa*, a jug-handle. *Ansatus homo* is explained by Cooper as "a man with his arms *on kenbow*." Archaic French for to stand with arms *akimbo* is "faire le pot a deux *anses*," and the same striking image occurs in German, Dutch and Spanish. Hence it seems a plausible conjecture that *kenebowe* means "jug-handle." This is confirmed by the fact that Dryden translates *ansa*, "the eare or handle of a cuppe or pot" (Cooper), by "*kimbo* handle" (Virgil, *Ecl.* iii. 44). Eng. *bow*, meaning anything bent, is used in many connexions for handle. The first element may be *can*, applied to every description of vessel in earlier English, as it still is in Scottish, or it may be some Scandinavian word. In fact the whole compound may be Scandinavian. Thomas's *Latin Dictionary* (1644) explains *ansatus homo* as "one that in bragging manner strowteth up and down with his armes *a-canne-bow*."

Demure has been explained as from Mid. Eng. *mure*, ripe, mature, with prefixed *de*. But *demure* is the older word of the two, and while the loss of the atonic first syllable is normal in English (p. 53), it would be hard to find a case in which a meaningless prefix has been added. Nor does the meaning of *demure* approximate very closely to that of ripe. It now has a suggestion of slyness, but in Milton's time meant sedate—

"Come, pensive nun, devout and pure,
Sober, stedfast and *demure*."

(*Penseroso*, l. 31.)—

and its oldest meaning is calm, settled, used of the sea. When we consider that it is nearly equivalent to *staid*, earlier *stayed*, and compare the equivalent terms in other languages, e.g., Lat. *sedatus*, Fr. *rassis*, Ger. *gesetzt*, etc., it seems likely that it is formed from the Old Norman *demurer* (*demeurer*), to "stay," just as *stale* is formed from Old Fr. *estaler* (*étaler*), to display on a *stall*, or *trove*, in "treasure *trove*," from Old Fr. *trover* (*trouver*).

The origin of *lugger* is unknown, but the word is recorded a

century later than *lugsail*, whence it is probably derived. The explanation of *lugsail* as a *sail* that is *lugged* seems to be a piece of folk-etymology. The French for *lugsail* is *voile de fortune*, and a still earlier name, which occurs also in Tudor English, is *bonaventure*, i.e., good luck. Hence it is not unreasonable to conjecture that *lugsail* stands for **luck-sail*, just as the name *Higson* stands for *Hickson* (see p. 136).

The *pips* on cards or dice have nothing to do with apple-pips. The oldest spelling is *peeps*. In the Germanic languages they are called "eyes," and in the Romance languages "points"; and the Romance derivatives of Lat. *punctus*, point, also mean "peep of day." Hence the *peeps* are connected with the verb to *peep*.

The game called *dominoes* is French, and the name is taken from the phrase *faire domino*, to win the game. *Domino*, a hooded cloak worn by priests in winter, is an Italian word, apparently connected with Lat. *dominus*. French also has, in various games, the phrase *faire capot*, with a meaning like that of *faire domino*. *Capot*, related to Eng. *cap* and Fr. *chapeau*, means properly a hooded cloak. The two metaphors are quite parallel, but it is impossible to say what was the original idea. Perhaps it was that of extinguishing the opponent by putting, as it were, his head in a bag.

The card game called *gleek* is often mentioned in Tudor literature. It is derived from Old Fr. *glic*, used by Rabelais, and the word is very common in the works of the more disreputable French poets of the 15th century. According to French archaeologists the game was also called *bonheur*, *chance*, *fortune* and *hasard*. Hence *glic* represents in all probability Ger. *glück*, luck.¹ The Old French form *ghelique* would correspond to Mid. High Ger. *gelücke*. The history of *tennis* (p. 15) and *trump* (p. 15) shows that it is not necessary to find the German word recorded in the same sense.

The word *sentry*, which occurs in English only, has no connexion at all with *sentinel*, the earliest form of which is Ital. *sentinella*, of unknown origin. The older lexicographers obscured the etymology of *sentry*, which is really quite simple, by always attempting to treat it along with *sentinel*. It is a common phenomenon in military language that the abstract name of an action is applied to the building or station in which the action is performed, then to the group of men thus employed, and finally to the individual soldier.

¹ Some derive it from Ger. *gleich*, like, used of a "flush."

Thus Lat. *custodia* means (1) guardianship, (2) a ward-room, watch-tower, (3) the watch collectively, (4) a watchman. Fr. *vigie*, the look-out man on board ship, can be traced back in a similar series of meanings to Lat. *vigilia*, watching.¹ A *sentry*, now a single soldier, was formerly a band of soldiers—

“What strength, what art can then
Suffice, or what evasion bear him safe
Through the strict *sentries* and stations thick
Of angels watching round?”

(*Paradise Lost*, ii. 410.)—

and earlier still a watch-tower, e.g., Cotgrave explains Old Fr. *eschaugnette* (*échaugnette*) as “a *sentrie*, watch-tower, beacon.” The purely abstract sense survives in the phrase “to keep *sentry*,” i.e. guard—

“Here toils, and Death, and Death’s half-brother, Sleep,
Forms terrible to view their *centry*² keep.”

(DRYDEN, *Aeneid*, vi. 277.)

It is a contracted form of *sanctuary*. In the 17th century it is a pretty familiar word in this sense. The earliest example I have come across is in Nashe—

“He hath no way now to slyppe out of my hands, but to take *sentrie* in the Hospital of Warwick.” (First Part of *Pasquil’s Apologie*, 1590.)

Fr. *guérite*, a sentry-box, can be traced back in the same way to Old Fr. *garir* (*guérir*), to save. Cotgrave explains it as “a place of refuge, and of safe retyrall,” also “a *sentrie*, or little lodge for a sentinell, built on high.” It is to this latter sense that we owe Eng. *garret*. In medieval French *guérite* means refuge, sanctuary—

“Ceste roche est Ihesucrist meismes qui est li refuges et la *garite* aus *humbles*.”³

¹ This is why so many French military terms are feminine, e.g., *recrue*, *sentinelle*, *vedette*, etc.

² Skinner’s *Etymologicon* (1671) has the two entries, *centry* pro *sanctuary* and *centry* v. *sentinel*. The spellings *centry* and *centinel*, which were common when the words still had a collective sense, are perhaps due to some fancied connexion with *century*, a hundred soldiers.

³ “This rock is Jesus Christ himself, who is the refuge and sanctuary of the humble.”

If French had not borrowed *sentinelle* from Italian, *guérite* would probably now mean "sentry"; cf. the history of *vigie* (p. 85), or of *vedette*, a cavalry sentry, but originally "a prying or peeping hole" (Florio), from Ital. *vedere*, to see.

CHAPTER VIII

METAPHOR

EVERY expression that we employ, apart from those that are connected with the most rudimentary objects and actions, is a metaphor, though the original meaning is dulled by constant use. Thus, in the above sentence, *expression* means what is "squeezed out," to *employ* is to "twine in" like a basket-maker, to *connect* is to "weave together," *rudimentary* means "in the rough state," and an *object* is something "thrown in our way." A classification of the metaphors in use in the European languages would show that a large number of the most *obvious* kind, i.e., of those which "come to meet" one, are common property, while others would reflect the most striking habits and pursuits of the various races. It would probably be found that in the common stock of simple metaphor the most important contribution would come from agriculture, while in English the nautical element would occur to an extent quite unparalleled in other European languages.¹ A curious agricultural metaphor which, though of Old French origin, now appears to be peculiar to English, is to *rehearse*, lit. to harrow over again (see *hearse*, p. 63).

Some metaphors are easy to track. It does not require much philological knowledge to see that *astonish*, *astound* and *stun* all

¹ It would be interesting to trace the rise and spread of nautical metaphor in English. We have a good example of the transition from the bucolic to the nautical in the expression "To lose the *ship* for a ha'porth of tar." Few people who use this metaphor know that *ship* is here the dialect pronunciation of *sheep*; cf. *Ship Street*, at Oxford (and elsewhere), for *Sheep Street*. Tar was, and is, used as a medicine for sheep, but in this particular case the allusion seems to be rather to the marking of sheep with tar; cf. "tarred with the same brush," i.e., members of the same flock.

METAPHOR

contain the idea of "thunder-striking," Vulgar Lat. **ex-tonare*. To *embarrass* is obviously connected with *bar*, and to *interfere* is to "strike between," Old Fr. *entreferir*. This word was especially used in the 16th century of a horse knocking its legs together in trotting, "to *interfeere*, as a horse" (Cotgrave). When we speak of a *prentice-hand*, sound *journeyman* work and a *masterpiece*, we revive the medieval classification of artisans into learners, qualified workmen and those who, by the presentation to their guild of a finished piece of work, were recognized as past (passed) masters.

But many of our metaphors are drawn from pursuits with which we are no longer familiar, or from arts and sciences no longer practised. *Disaster*, *ill-starred* and such adjectives as *jovial*, *mercurial* are reminiscent of astrology. To bring a thing to the *test* is to put it in the alchemist's or metallurgist's *test* or trying-pot (cf. *test-tube*), Old Fr. *test* (*têt*). This is related to Old Fr. *teste* (*tête*), head, from Lat. *testa*, tile, pot, etc., used in Roman slang for *caput*. Shakespeare has the complete metaphor—

"Let there be some more *test* made of my metal,¹
Before so noble and so great a figure
Be stamp'd upon it."

(*Measure for Measure*, i. 1.)

The old butchers' shops which once adjoined Nottingham Market Place were called the *Shambles*. The word is similarly used at Carlisle and probably elsewhere; but to most people it is familiar only in the metaphorical sense of place of slaughter, generally regarded as a singular. Thus Denys of Burgundy says—

"The beasts are in the *shambles*."

(*Cloister and Hearth*, Ch. 33.)—

etymologically misusing the word, which does not mean slaughter-house, but the bench on which meat is exposed for sale. It is a very early loan from Lat. *scamnum*, a bench or form, also explained by Cooper as "a step or grice (see p. 96) to get up to bedde." The same diminutive form occurs in Fr. *escabeau*, an office-stool, and Ger. *schemel*, a stool.

Fusty, earlier *foisty*, is no longer used in its proper sense. It comes from Old Fr. *fusté*, "*fusty*; tasting of the caske, smelling of the

¹ See *mettle*, p. 115.

vessell wherein it hath been kept" (Cotgrave), a derivative of Old Fr. *fust* (*fût*), a cask.¹

The smith's art has given us *brand-new*, often corrupted into *bran-new*. Shakespeare uses *fire-new*—

"You should then have accosted her; and with some excellent jests, *fire-new* from the mint, you should have banged the youth into dumbness." (*Twelfth Night*, iii. 2.)

Modern German has *funkelnagelneu*, spark nail new; but in older German we find also *spanneu*, *splinterneu*, chip new, splinter new; which shows the origin of our *spick and span* (new), *i.e.*, spike and chip new. French has *tout battant neuf*, beating new, *i.e.*, fresh from the anvil.

Many old hunting terms survive as metaphors. To be *at bay*, Fr. *aux abois*, is to be facing the baying hounds. The fundamental meaning of Old Fr. *abaier* (*aboyer*), of obscure origin, is perhaps to gape at.² Thus a right or estate which is in *abeyance* is one regarded with open-mouthed expectancy. The *toils* are Fr. *toiles*, lit. cloths (from Lat. *tela*), the nets put round a thicket to prevent the game from escaping. To "beat about the bush" seems to be a mixture of two metaphors which are quite unlike in meaning. To "beat the bush" was the office of the beaters, who started the game for others, hence an old proverb, "I will not beat the bush that another may have the birds." To "go about the bush" would seem to have been used originally of a hesitating hound. The two expressions have coalesced to express the idea for which French says "*y aller par quatre chemins*." *Crestfallen* and *white feather* belong to the old sport of cock-fighting. *Jeopardy* is Old Fr. *jeu parti*, a divided game, hence an equal encounter. To run full *tilt* is a jousting phrase. To *pounce* upon is to seize in the *pounces*, the old word for a hawk's claws. The ultimate source is Lat. *pungere*, to prick, pierce. A goldsmith's *punch* was also called a *pounce*, hence the verb to *pounce*, to make patterns on metal. The northern past

¹ Lat. *fustis*, a staff, cudgel, gave also Old Fr. *fust*, a kind of boat, whence obsolete Eng. *foist* in the same sense. Both meanings seem to go back to a time when casks and boats were "dug out" instead of being built up.

² Related are *bouche béante*, or *bée*, mouth agape; *bâiller*, to yawn; and *badaud*, "a gaping hoydon" (Cotgrave, *badault*).

METAPHOR

participle *pouncet*¹ occurs in *pouncet-box*, a perforated metal globe for scents—

"And 'twixt his finger and his thumb he held
A *pouncet-box*, which ever and anon
He gave his nose, and took't away again."

(1 *Henry IV.*, i. 3.)

To the language of hawking belongs also *haggard*. Cotgrave defines *faulcon* (*faucon*) *hagard*, as "a faulcon that preyed for her selfe long before she was taken." Hence the sense of wild, untameable. The original meaning is hedge-hawk, the first syllable representing Old High Ger. *hag*, hedge. *Hag*, a witch, is of cognate origin.

The antiquity of dicing appears in the history of Ger. *gefallen*, to please, originally used of the "fall" of the dice. In Mid. High German it is always used with *wohl*, well, or *übel*, ill; e.g., *es gefällt mir wohl*, it "falls out" well for me. There can be no reasonable doubt that the *deuce!* is a dicer's exclamation at making the lowest throw, two, Fr. *deux*. We still use *deuce* for the two in cards, and German has *daus* in both senses. Tennis has given us *bandy*, Fr. *bander*, "to *bandie*, at tennis" (Cotgrave). We now only *bandy* words or reproaches, but Juliet understood the word in its literal sense—

"Had she affections and warm youthful blood,
She'd be as swift in motion as a ball;
My words would *bandy* her to my sweet love,
And his to me."

(*Romeo and Juliet*, iii. 5.)

Fowling has given us *cajole*, *decoy* and *trepan*. Fr. *cajoler*, which formerly meant to chatter like a jay in a cage, has in modern French assumed the meaning of *enjôler*, earlier *engeoler*, "to incage, or ingaole" (Cotgrave), hence, to entice. Fr. *geôle*, gaol, represents Vulgar Lat. **caveola*. *Decoy*, earlier also *coy*, is Du. *kooi*, cage. The later form is perhaps due to *duck-coy*. Du. *kooi* is also of Latin origin. It comes, like Fr. *cage*, from Vulgar Lat. **cavea*, and has a doublet *kevie*, whence Scot. *cavie*, a hen-coop. *Trepan* was formerly *trapan*, and belongs to *trap*—

"Some by the nose with fumes *trapan* 'em,
As Dunstan did the devil's grannam."

(*Hudibras*, ii. 3.)

¹ Cf. the *Stickit Minister*.

It is now equivalent to *kidnap*, i.e., to *nab kids* (children), once a lucrative pursuit. The surgical *trepan* is a different word altogether, and belongs to Greco-Lat. *trypanon*, an auger, piercer. To *allure* is to bring to the *lure*, or bait. To the same group of metaphors belongs *inveigle*, which corresponds, with altered prefix, to Fr. *aveugler*, to blind, Vulgar Lat. **ab-oculare*.¹ A distant relative of this word is *ogle*, which is of Low German origin; cf. Ger. *liebäugeln* "to ogle, to smicker, to look amorously, to cast sheeps-eyes, to cast amorous looks" (Ludwig).

The archaic verb to *cozen* is a metaphor of quite another kind. Every young noble who did the Grand Tour in the 16th and 17th centuries spent some time at Naples, "where he may improve his knowledge in horsemanship" (Howell, *Instructions for Forreine Travell*, 1642). Now the Italian horse-dealers were so notorious that Dekker, writing about 1600, describes a swindling "horse-courser" as a "meere jadish Nonpolitane," a play on Neapolitan. The Italian name is *cozzone*, "a horse-courser, a horse-breaker, a craftie knave" (Florio), whence the verb *cozzonare*, "to have perfect skill in all *cosenages*" (Torriano). The essential idea of to *cozen* in the Elizabethans is that of selling faulty goods in a bad light, a device said to be practised by some horse-dealers. At any rate the words for horse-dealer in all languages, from the Lat. *mango* to the Amer. *horse-swapper*, mean swindler and worse things. *Cozen* is a favourite word with the Elizabethan dramatists, because it enables them to bring off one of those stock puns that make one feel "The less Shakespearc he"—

"Cousins, indeed; and by their uncle *cozen'd*
Of comfort, kingdom, kindred, freedom, life."

(*Richard III.*, iv. 4.)

In *The Merry Wives of Windsor* (iv. 5) there is a lot of word-play on "cousins-german" and "German cozeners." An exact parallel to the history of *cozen* is furnished by the verb to *jockey*, from *jockey*, in its older sense of horse-dealer.

Scion is a metaphor from the garden. It is Fr. *scion*, "a scion; a young and tender plant; a shoot, sprig or twig" (Cotgrave). Ger. *sprössling*, sproutling, is also used of an "offshoot" from a "stock." We have a similar metaphor in the word *imp*. We now *graft* trees,

¹ Or perhaps **alboculare*, as *albus oculus*, lit. white eye, is used of blindness in an early Vulgar Latin glossary.

METAPHOR

a misspelling of older *graffe*, Fr. *greffe*, Greco-Lat. *graphium*, a pencil, from the shape of the slip. But the older word was *imp*, which we find also used of inserting a new feather into the wing or tail of a hawk, or fitting a small bell-rope to a larger one. The art of grafting was learnt from the Romans, who had a post-classical verb *imputare*,¹ to graft, which has given Eng. *imp*, Ger. *impfen*, Fr. *enter*, and is represented in most other European languages. *Imp* was used like *scion*, but degenerated in meaning. In Shakespeare it has already the somewhat contemptuous shade of meaning which we find in Ger. *sprössling*, and is only used by comic characters. Thus Pistol addresses Prince Hal—

“The heavens thee guard and keep, most royal *imp* of fame.”
(2 *Henry IV.*, v. 5.)

But Thomas Cromwell, in his last letter to Henry VIII., speaks of—

“That most noble *imp*, the prince’s grace, your most dear son.”

The special sense of “young devil” appears to be due to the frequent occurrence of such phrases as “*imps* (children) of Satan,” “the devil and his *imps*,” etc. Ger. *impfen* also means to vaccinate. Our earlier term *inoculate*² originally meant to graft, and, in fact, *engraft* was also used in this sense.

Zest is quite obsolete in its original meaning of a piece of orange peel used to give piquancy to wine. It is Fr. *zeste*, of unknown origin, properly applied to the inner skin of fruit and nuts. Cotgrave explains it as “the thick skinne, or filme whereby the kernell of a wallnut is divided.”

¹ Of uncertain origin. Lat. *putare*, to cut (cf. *amputate*), or Gk. *emphytos*, implanted?

² From *oculus*, eye, in the sense of bud.

CHAPTER IX FOLK-ETYMOLOGY

THE sound, spelling and even the meaning of a word are often perverted by influences to which the collective name of folk-etymology has been given. I here use the term to include all phenomena which are due to any kind of misunderstanding of a word. A word beginning with *n* sometimes loses this sound through its being confused with the *n* of the indefinite article *an*. Thus *an adder* and *an auger* are for *a nadder* (cf. Ger. *natter*) and *a nauger*, Mid. Eng. *navegor*, properly an instrument for piercing the *nave* of a wheel. *Apron* was in Mid. English *naprun*, from Old Fr. *naperon*, a derivative of *nappe*, cloth. The *aitch-bone* was formerly the *nache-bone*, from Old Fr. *nache*, buttock, Vulgar Lat. **natica* for *nates*. *Nache* is still used by French butchers. *Humble-pie* is a popular perversion of *umble-pie*, i.e., a pie made from the *umbles*, or inferior parts of the stag. But *umble* is for earlier *numble*, Old Fr. *nomble*, formed, with dissimilation, from Lat. *lumbulus*, diminutive of *lumbus*, loin; cf. *niveau* (p. 50). Thus *humble-pie* has etymologically no connexion with humility. *Umpire* represents Old Fr. *non per* (*pair*), not equal, the *umpire* being a third person called in when arbitrators could not agree. This appears clearly in the following extract from a medieval letter—

“And if so be that the said arbitrators may not accord before the said feast of Allhalowes, then the said parties be the advise abovesaid are agreed to abide the award and ordinance of an *noumper* to be chosen be the said arbitrators.” (*Plumpton Correspondence*, 1431.)

For the sense we may compare Span. *tercero*, “the third, a broaker, a mediator” (Percyvall). *An eyas* falcon is for *a neyas* falcon, Fr. *niais*, foolish, lit. nestling, related to *nid*, nest. Rosenkrantz uses it in the literal sense—

“But there is, sir, an aiery of children, little *eyases*, that cry out on the top of question, and are most tyrannically clapped for’t.”

(*Hamlet*, ii. 2.)

Somewhat similar is the loss in French of initial *a* in *la boutique* for *l'aboutique*, Greco-Lat. *apotheca*, and *la Pouille* for *l'Apouille*, Apulia, or of the initial *l* in *ounce*, a kind of tiger-cat, from Fr. *once*, earlier *lonce*, "the ounce, a ravenous beast" (Cotgrave), taken as *l'once*. It is almost a doublet of *lynx*.

The opposite has happened in the case of *a newt* for *an ewt* and *a nick-name* for *an eke-name*. *Eke*, also, occurs in the first stanza of John Gilpin. It is cognate with Ger. *auch*, also, and Lat. *augere*, to increase. *Nuncle*, the customary address of a court fool to his superiors—

"How now, *nuncle*! Would I had two coxcombs and two daughters."
(*Lear*, i. 4.)—

is for *mine uncle*. We also find *naunt*. *Nonce* occurs properly only in the phrase *for the nonce*, which is for earlier *for then ones*, where *then* is the dative of the definite article. Family names like *Nash*, *Nokes* are aphetic for *atten ash*, at the ash, *atten oaks*, at the oaks. The creation of such forms was perhaps helped by our tendency to use initial *N*- in Christian names, e.g., *Ned* for *Edward*, *Noll* for *Oliver*, *Nell* for *Ellen*.

Agglutination of the definite article is common in French, e.g., *lingot*, ingot, *lierre*, ivy, for Old Fr. *l'ierre*, Lat. *hedera*, and the dialect *lévier*, sink, for *évier*, Lat. *aquarium*, whence Eng. *ewer*. The derivation of Fr. *landier*, andiron, is unknown, but the *iron* of the English word is due to folk-etymology. Such agglutination occurs often in family names such as *Langlois*, lit. the Englishman, *Lhuissier*, the usher (see p. 75), and some of these have passed into English, e.g., *Levick* for *Lévêque*, the bishop.

The two words *alarm* and *alert* include the Italian definite article. The first is Ital. *all'arme*, to arms, for *a le arme*, and the second is *all'erta* for *alla (a la) erta*, the last word representing Lat. *erecta*. With rolled *r*, *alarm* becomes *alarum*, whence the aphetic *larum*—

"Then we shall hear their *larum*, and they ours."
(*Coriolanus*, i. 4.)

Ger. *lärm*, noise, is the same word. In Luther's time we also find *allerm*.

We have the Arabic definite article in a great many words borrowed from Spanish. *Alcalde*, or *alcade*, and *alguazil*, common

in Elizabethan literature, are two old friends from the *Arabian Nights*, the *cadi* and the *wazir*, or *vizier*. The Arabic article also occurs in *acton*, Old Fr. *auqueton*, now *hoqueton*, for *al qutn* (cotton), because originally used of a wadded coat—

“But Cranstoun’s lance, of more avail,
Pierced through, like silk, the Borderer’s mail;
Through shield, and jack, and *acton* past,
Deep in his bosom broke at last.”

(SCOTT, *Lay*, iii. 6.)

In *alligator*, Span. *el lagarto*, the lizard, from Lat. *lacertus*, we have the Spanish definite article. See also *lariat*, p. 26.

A foreign word ending in a sibilant is sometimes mistaken for a plural. Thus Old Fr. *assets* (*assez*), enough, Lat. *ad satis*, has given Eng. *assets*, plural, with a barbarous, but useful, singular *asset*. *Cherry* is for *cheris*, from a dialect form of Fr. *cerise*, and *sherry* for *sherris*, from *Jerez* in Spain (see p. 45). Falstaff opines that—

“A good *sherris-sack*¹ hath a twofold operation in it.”
(2 *Henry IV.*, iv. 3.)

Pea is a false singular from older *pease*, Lat. *pisum*. Perhaps the frequent occurrence of *pease-soup*, not to be distinguished from *pea-soup*, is partly responsible for this mistake. *Marquee*, a large tent, is from Fr. *marquise*. With this we may class the heathen *Chinee* and the *Portugee*. Milton wrote correctly of—

“The barren plains
Of Sericana, where *Chineses* drive
With sails and wind their cany waggons light.”
(*Paradise Lost*, iii. 438.)

It has been ingeniously suggested that *Yankee* is derived in the same way from Du. *Jan Kees*, John Cornelius, supposed to have been a nickname for early Dutch colonists. It is more probably the Dutch dim. *Janke*, i.e. Johnny. The vulgarism *shay* for *chaise*²

¹ *Sack*, earlier also *seck*, is Fr. *sec*, dry, which, with spurious *t*, has also given Ger. *sekt*, now used for champagne.

² Fr. *chaise*, chair, for older *chaire* (now used only of a pulpit or professorial chair), Lat. *cathedra*, is due to an affected pronunciation that prevailed in Paris in the 16th century.

is of similar formation. *Corp*, for *corpse*, is also used provincially. *Kickshaws* is really a singular from Fr. *quelque chose*—

“Art thou good at these *kickshawses*, knight?”
(*Twelfth Night*, i. 3.)

Cotgrave spells it *quelkchoses* (s.v. *fricandeau*).

Skate has a curious history. It is a false singular from Du. *schaats*. This is from *escache*, an old French dialect form of *échasse*, stilt, which was used in the Middle Ages for a wooden leg. It is of German origin, and is related to *shank*. Cf., for the sense-development, Eng. *patten*, from Fr. *patin*, a derivative of *patte*, foot, cognate with *paw*. *Skates* are still called *pattens* by the fenmen of Cambridgeshire. We also had formerly a doublet from Old Fr. *escache* directly, but in the older sense, for Cotgrave has *eschasses* (*échasses*), “stilts, or *scatches* to go on.” *Row*, a disturbance, belongs to *rouse*, a jollification—

“The king doth wake to-night and takes his *rouse*.”
(*Hamlet*, i. 4.)—

of uncertain origin, but probably aphetic for *carouse*, *drink carouse* being wrongly separated as *drink a rouse*. The bird called a *wheatear* was formerly called *wheatears*, a corruption of a name best explained by its French equivalent *cul blanc*, “the bird called a whittail” (Cotgrave). We may compare the bird-name *redstart*, where *start* means rump.

Conversely a word used in the plural is sometimes regarded as a singular, the result being a double plural. Many Latin neuter plurals were adopted into French as feminine singulars, e.g., *cornua*, *corne*, horn; *labra*, *lèvre*, lip; *vela*, *voile*, sail. It is obvious that this is most likely to occur in the case of plurals which are used for a pair, or set, of things, and thus have a kind of collective sense. *Breeches* or *brecks* is a double plural, Anglo-Sax. *brēc* being already the plural of *brōc*. In Mid. English we still find *breche* or *breke* used of this garment. *Trousers* was earlier *trouses*, plural of *trouse*, now *trews*, and was used especially of Irish native costume. The latest researches throw doubt on the identity of these words with Fr. *trousse*, a page’s short breeches. The etymology which now finds most favour is Irish and Gaelic *triubhas*, from Late Lat. *tubraci* or *tribraci*, which is supposed to be a corrupted compound from *tibia*, leg, shank, and *braccae*, breeches. *Bodice* is for *bodies*, as *pence* is for *pennies*. Cotgrave explains *corset* by “a paire of *bodies* for

a woman," and the plural sense occurs as late as Harrison Ainsworth—

"A *pair of bodice* of the cumbrous form in vogue at the beginning of the last century." (*Jack Sheppard*, Ch. 1.)

Trace, of a horse, is the Old Fr. plural *traits*¹ (*traits*) of *trait*, "a teame-trace" (Cotgrave). *Apprentice* is the plural of Fr. *apprenti*, formerly *apprentif*, a derivative of *apprendre*, to learn, hence a disciple. *Invoice* is the plural of the obsolete *invoy*, from Fr. *envoi*, sending.

In the *Grecian steps*, at Lincoln, we have a popular corruption of the common Mid. English and Tudor *grece*, *grese*, plural of Old Fr. *gré*, step, from Lat. *gradus*. Shakespeare spells it *grize*—

"Let me speak like yourself, and lay a sentence,
Which, as a *grize*, or step, may help these lovers
Into your favour."

(*Othello*, i. 3.)

Scot. *brose*, or *brewis*, was in Mid. Eng. *browes*, from Old Fr. *brouez*, plural of *brouet*, a word cognate with our *broth*. From this association comes perhaps the use of *broth* as a plural in some of our dialects. *Porridge*, not originally limited to oatmeal, seems to be combined from *pottage* and Mid Eng. *porrets*, plural of *porret*, leek, a diminutive from Lat. *porrum*. *Porridge* is sometimes used as a plural in Scottish—

"They're fine, halesome food, they're grand food, *parritch*."

(*Kidnapped*, Ch. 3.)—

and in the northern counties of England people speak of taking "a few" porridge, or broth. *Baize*, now generally green, is for earlier *bayes*, the plural of the adjective *bay*, now used only of horses; cf. Du. *baai*, baize. The origin of the adjective *bay*, Fr. *bai*, forms of which occur in all the Romance languages, is Lat. *badius*, "of bay colour, bayarde" (Cooper). Hence the name *Bayard*, applied to FitzJames's horse in *The Lady of the Lake* (v. 18), and earlier to the steed that carried the four sons of Aymon. *Quince* is the plural of *quin*, from the Norman form of Old Fr. *coin* (*coing*), which is derived from Greco-Lat. *cydonium*. *Truce* is the

¹ The fact that in Old French the final consonant of the singular disappeared in the plural form helped to bring about such misunderstandings.

plural of Mid. Eng. *trewe* (lit. truth, faith) with the same meaning. Already in Anglo-Saxon it is found in the plural, probably as rendering the Latin plural *induciae*. *Lettuce*, Mid. End. *letows*, seems also to be a plural, from Fr. *laitue*, Lat. *lactuca*.

Earnest in the sense of pledge—

“And, for an *earnest* of a greater honour,
He bade me, from him, call thee Thane of Cawdor.”
(*Macbeth*, i. 3.)—

has nothing to do with the adjective *earnest*. It is the Mid. Eng. *ernes*, earlier *erles*, which survives as *arles* in some of our dialects. The verb to *earl* is still used in Cumberland of “enlisting” a servant with a shilling in the open market. The Old French word was *arres* or *erres*, now written learnedly *arrhes*, a plural from Lat. *arrha*, “an *earnest* penny, *earnest* money” (Cooper). The existence of Mid. Eng. *erles* shows that there must have been also an Old French diminutive form. For the apparently arbitrary change of *l* to *n* we may compare *banister* for *baluster* (see p. 52).

The *jesses* of a hawk—

“If I do prove her haggard,¹
Though that her *jesses* were my dear heart-strings,
I’d whistle her off, and let her down the wind,
To prey at fortune.”
(*Othello*, iii. 3.)—

were the thongs by which it was held or “thrown” into the air. *Jess* is the Old Fr. *jes*, the plural of *jet*, from *jeter*, to throw. In Colman’s *Elder Brother* we read of a gentleman who lounged and chatted, “not minding time a *souse*,” where *souse* is the plural of Fr. *sou*, halfpenny. From Fr. *muer*, to moult, Lat. *mutare*, we get Fr. *mue*, moulting, later applied to the coop or pen in which moulting falcons were confined, whence the phrase “to *mew* (up)”—

“More pity, that the eagles should be *mew’d*,
While kites and buzzards prey at liberty.”
(*Richard III.*, i. 1.)

When, in 1534, the royal *mews*, or hawk-houses, near Charing Cross were rebuilt as stables, the word acquired its present meaning.

¹ For *haggard* see p. 89.

Chess, Old Fr. *eschés* (*échecs*), is the plural of *check*, Fr. *échec*, from Persian *shāh*, king. By analogy with the "game of kings," the name *jeu des dames* was given in French to draughts, still called *dams* in Scotland. *Draught*, from *draw*, meant in Mid. English a "move" at chess. The etymology of *tweezers* can best be made clear by starting from French *étui*, a case, of doubtful origin. This became in English *etwee*, or *twee*, e.g., Cotgrave explains *estui* (*étui*) as "a sheath, case, or box to put things in; and (more particularly) a case of little instruments, as sizzars, bodkin, penknife, etc., now commonly termed an *ettwee*." Such a case generally opens book-fashion, each half being fitted with instruments. Accordingly we find it called a surgeon's "pair of *twees*," or simply *tweese*, and later a "pair of *tweeses*." The implement was named from the case (cf. Fr. *boussole*, p. 103), and became *tweezers* by association with *pincers* (Fr. *pincés*), *scissors*, etc.

The form of a word is often affected by association with some other word with which it is instinctively coupled. Thus *larboard*, for Mid. Eng. *ladeboard*, i.e., loading side, is due to *starboard*, steering side. *Bridal*, for *bride-ale*, from the liquid consumed at marriage festivities, is due to analogy with *betrothal*, *espousal*, etc. A 16th-century Puritan records with satisfaction the disappearance of—

"Church-ales, helpe-ales, and soule-ales, called also dirge-ales, and heathenish rioting at *bride-ales*."

(HARRISON, *Description of England*, 1577.)

Rampart is from Old Fr. *rempar*, a verbal noun from *remparer*, to repair; cf. Ital. *riparo*, "a *rampire*, a fort, a banke" (Florio). By analogy with Old Fr. *boulevard* (*boulevard*), of German origin and identical with our *bulwark*,¹ *rempar* became *rempart*. The older English form occurs in the obsolete *rampier* or *rampire*, which survive in the dialect *rampet*, embankment, causeway. For the spelling *rampire* we may compare *umpire* (p. 92). The apple called a *jenneting*, sometimes "explained" as for *June-eating*, was once spelt *geniton*, no doubt for Fr. *jeanneton*, a diminutive of *Jean*. It is called in French *pomme de Saint-Jean*, and in German *Johannisapfel*, because ripe about St John's Day (24th June). The

¹ In Old French confusion sometimes arose with regard to final consonants, because of their disappearance in the plural (see p. 96, n.). In *gerfaut*, *gerfalcon*, for Old Fr. *gerfauc*, the less familiar final -c was, as in *boulevard*, replaced by the more usual -t.

modern form is due to such apple names as *golding*, *sweeting*, *codlin*, *pippin*.

In the records of medieval London we frequently come across the distinction made between people who lived "in the city," Anglo-Fr. *deinz* (*dans*) *la cité*, and "outside the city," Anglo-Fr. *fors* (*hors*) *la cité*. The former were called *deinzein*, whence our *denizen*, and the latter *forein*.¹ The Anglo-French form of modern Fr. *citoyen* was *citein*, which became *citizen* by analogy with *denizen*. The following passage from a medieval London by-law shows how rigid was the division between "denizen" and "foreign" traders—

"Item, qe nulle pulletere *deinzeyn* n'estoie a Carfeux del Ledenhalle deins mesoun ne dehors, ove conilles, volatilie, n'autre pulletrie pur vendre . . . issint qe les *forreins* pulleters, ove lour pulletrie, estoient par eux mesmes, et vendent lour pulletrie sur le cornere de Ledenhalle, sanz ceo qe ascuns pulletere *deinzein* viegne ou medle en vent ou en achate ove eux, ne entre eux."² (*Liber Albus*.)

Even words which have opposite meanings may affect each other by association. Thus Lat. *reddere*, to give back, became Vulgar Lat. **rendere* by analogy with *prendere* (*prehendere*), to take away; hence Fr. *rendre*. Our word *grief*, from Fr. *grief*, is derived from a Vulgar Lat. **grevis*, heavy (for *gravis*), which is due to *levis*, light.

The plural of *titmouse* is now usually *titmice*, by analogy with *mouse*, *mice*, with which it has no connexion. The second part of the word is Anglo-Sax. *māse*, used of several small birds. It is cognate with Ger. *meise*, titmouse, and Fr. *mésange*, "a titmouse, or tittling" (Cotgrave). *Tit*, of Norse origin, is applied to various

¹ An unoriginal *g* occurs in many English words derived from French, e.g., *foreign*, *sovereign*, older *souvan*, *sprightly* for *spritely*, i.e., *sprite-like*, *delight*, from Old Fr. *delit*, which belongs to Lat. *delectare*.

² "Also, that no 'denizen' poulterer shall stand at the 'Carfax' of Leadenhall in a house or without, with rabbits, fowls, or other poultry to sell . . . and that the 'foreign' poulterers, with their poultry, shall stand by themselves, and sell their poultry at the corner of Leadenhall, without any 'denizen' poulterer coming or meddling in sale or purchase with them, or among them."

The word *carfax*, once the usual name for a "cross-way," survives at Oxford and Exeter. It is a plural, from Fr. *carrefour*, Vulgar Lat. **quadrifurcum* (for *furca*), four-fork.

small animals, and occurs also as a prefix in *titbit* or *tidbit*. Cf. *tom-tit* (p. 35).

The Spanish word *salva*, "a taste, a salutation" (Percyvall), was used of the "pregustation" of a great man's food or drink. We have given the name to the tray or dish from which the "assay" was made, but, by analogy with *platter*, *trencher*, we spell it *salver*. In another sense, that of a "salutation" in the form of a volley of shot, *salva* has become Eng. *salvo*. With the use of Span. *salva* we may compare that of Ital. *credenza*, lit. faith, "the taste or assaie of a princes meate and drinke" (Florio), whence Fr. *crédence*, sideboard, used in English only in the ecclesiastical compound *credence table*, and Ger. *kredenzen*, to pour out.

In spoken English the ending *-ew*, *-ue*, of French origin, has been often changed to *-ee*, *-ey*. Thus *pedigree* was formerly *pedigrew* (see p. 65). The fencing term *veney*—

"I bruised my shin the other day with playing at sword and dagger with a master of fence—three *veney*s for a dish of stewed prunes." (*Merry Wives*, i. 1.)—

also spelt *venew*, is from Fr. *venue*, "a *venny* in fencing" (Cotgrave). *Carew* has become *Carey*, and *Beaulieu*, in Hampshire, is called *Bewley*. Under the influence of these double forms we sometimes get the opposite change, e.g., *purlieu*, now generally used of the outskirts of a town, is for *purley*, a strip of disforested woodland. This is a contraction of Anglo-Fr. *pour-allée*, used to translate the legal Lat. *perambulatio*, a going through. A change of *venue*¹ is sometimes made, when it seems likely that an accused person, or a football team, will not get justice from a local jury. This *venue* is in law Latin *vicinetum*, neighbourhood, which gave Anglo-Fr. *visné*, and this, perhaps by confusion with the *venire facias*, or jury summons, became *venew*, *venue*.

In the preceding examples the form has been chiefly affected. In the word *luncheon* both form and meaning have been influenced by the obsolete *nuncheon*, a meal at noon, Mid. Eng. *none-chenche*, for **none-schenche*, noon draught, from Anglo-Sax. *scencan*,² to pour. Drinking seems to have been regarded as more important than

¹ This word is getting overworked, e.g., "The Derbyshire Golf Club links were yesterday the *venue* of a 72-hole match" (*Nottingham Guardian*, 21st Nov. 1911).

² Cf. Ger. *schenken*, to pour, and the Tudor word *skinker*, a drawer, waiter (1 *Henry IV.*, ii. 4).

eating, for in some counties we find this *nuncheon* replaced by *bever*, the Anglo-French infinitive from Lat. *bibere*, to drink. *Lunch*, a piece or hunk, especially of bread, also used in the sense of a "snack" (*cf.* Scot. "piece"), was extended to *luncheon* by analogy with *nuncheon*, which it has now replaced—

"So munch on, crunch on, take your *nuncheon*,
Breakfast, supper, dinner, *luncheon*."

(BROWNING, *Pied Piper of Hamelin*.)

The term folk-etymology is often applied in a narrower sense to the corruption of words through a mistaken idea of their etymology or origin. The tendency of the uneducated is to distort an unfamiliar or unintelligible word into some form which suggests a meaning. Some cases may have originated in a kind of heavy jocularly, as in *sparrow-grass* for *asparagus* or *sparagus* (see p. 56), or Rogue Riderhood's *Alfred David* for *affidavit*—

"'Is that your name?' asked Lightwood. 'My name?' returned the man. 'No; I want to take a *Alfred David*.'" (*Our Mutual Friend*, Ch. 12.)

In others there has been a wrong association of ideas, *e.g.*, the *primrose*, *rosemary* and *tuberose* have none of them originally any connexion with the *rose*. *Primrose* was earlier *primerole*, an Old French derivative of Latin *primula*; *rosemary*, French *romarin*, is from Lat. *ros marinus*, sea-dew; *tuberose* is the Latin adjective *tuberosus*, bulbous, tuberous. Or attempts are made at translation, such as Sam Weller's *Have his carcase* for *Habeas Corpus*, or the curious names which country folk give to such complaints as *bronchitis*, *erysipelas*, etc. To this class belongs Private Mulvaney's perversion of *locomotor ataxy*—

"'They call ut *Locomotus attacks us*,' he sez, 'bekaze,' sez he, 'it attacks us like a locomotive.'" (*Love o' Women*.)

Our language is, owing to our borrowing habits, particularly rich in these gems. Examples familiar to everybody are *crayfish* from Fr. *écrevisse*, *gillyflower* from Fr. *giroflée*, *shamefaced* for *shamefast*. Other words in which the second element has been altered are *causeway*, earlier *causey*, from the Picard form of Fr. *chaussée*, Lat. (*via*) *calciata*, *i.e.*, made with lime, *calx*; *penthouse*, for *pentice*, Fr. *appentis*, "the *penthouse* of a house" (Cotgrave), a derivative of Old Fr. *appendre*, to hang to. Fr. *hangar*, a shed, now introduced

into English by aviators as unnecessarily as *garage* by motorists, may also contain the same idea of "hanging."

In *hiccough*, for earlier *hickup*, an onomatopoeic word, the spelling, suggested by *cough*, has not affected the pronunciation. *Surcease* is Fr. *sursis*, past participle of *surseoir*, "to surcease, pause, intermit, leave off, give over, delay or stay for a time" (Cotgrave), Lat. *supersedere*. *Taffrail* has been confused with *rail*, its older form being *tafferel*, from Du. *tafereel*, diminutive of *tafel*, picture, from Lat. *tabula*. It meant originally the flat part of the stern of a ship ornamented with carvings or pictures. This is called *tableau* in nautical French. Fr. *coutelas*, an augmentative of Old Fr. *coutel* (*couteau*), knife, gave Eng. *cullass*, which has no more etymological connexion with "cutting" than a *cutler*, Fr. *coutelier*, or a *cutlet*, Fr. *côtelette*, little rib, Lat. *costa*. *Cullass* was popularly corrupted into *curtal-axe*, the form used by Rosalind—

"A gallant *curtal-axe* upon my thigh,
A boar-spear in my hand."

(*As You Like It*, i. 3.)

We have a similar corruption in *pick-axe*, Mid. Eng. *pikeys*, Old Fr. *piquois*, *picquois*, "a pickaxe" (Cotgrave), from the verb *piquer*. The word *posthumous* has changed its meaning through folk-etymology. It represents the Latin superlative *postumus*, latest born. By association with *humus*, ground, earth, it came to be used of a child born, or a work published, after its author's death, a meaning which the derivatives of *postumus* have in all the Romance languages.

The first part of the word has been distorted in *pursy*, short-winded—

"And *pursy* insolence shall break his wind
With fear and horrid flight."

(*Timon of Athens*, v. 5.)—

Fr. *poussif*, from Lat. *pulsus*, throbbing. It was formerly used also in connexion with horses—

"You must warrant this horse clear of the glanders and *pursyness*."
(*The Gentleman's Dictionary*, 1705.)

Arquebus, Fr. *arquebuse*, is a doublet of *hackbut*, Old Fr. *haquebute*, "an *haquebut*, or *arquebuse*; a caliver" (Cotgrave). The corruption

FOLK-ETYMOLOGY

is due to *arcus*, bow. Both *arquebus* and *hackbut* are common in Scott—

"His arms were halbert, axe, or spear,
A cross-bow there, a *hackbut* here,
A dagger-knife, and brand."

(*Marmion*, v. 3.)

The origin is Du. *haakbus*, hook-gun, the second element of which appears in *blunderbuss*. The first part of this word has undergone so many popular transformations that it is difficult to say what was the original form. Ludwig has *donner-büchs*, *blunder-büchs*, oder *muszketon*, "a thunder-box; a *blunder-buss*; a musketoon; a wide-mouthed brass-gun, carrying about twenty pistol bullets at once." It was also called in German *plantier-büchs*, from *plantieren*, to plant, set up, because fired from a rest. Du. *bus*, like Ger. *büchse*, means both "box" and "gun." In the *bushes*, or axle-boxes, of a cart-wheel, we have the same word. The ultimate origin is Gr. *pyxos*, the box-tree, whence also the learned word *pyx*. Fr. *boîte*, box, is cognate, and Fr. *boussole*, mariners' compass, is from the Italian diminutive *bossola*, "a boxe that mariners keepe their compasse in. Also taken for the compasse" (Florio).

Scissors were formerly *cizars* (cf. Fr. *ciseaux*), connected with Lat. *caedere*, to cut. The modern spelling is due to association with Lat. *scissor*, a cutter, tailor, from *scindere*, to cut. *Runagate* is well known to be a corrupt doublet of *renegade*, one who has "denied" his faith. *Recreant*, the present participle of Old Fr. *recreire*, Vulgar Lat. **recredere*, to change one's faith, contains very much the same idea; cf. *miscreant*, lit. unbeliever. *Jaunty*, spelt *janty* by Wycherley and *genty* by Burns, is Fr. *gentil*, wrongly brought into connexion with *jaunt*.

In some cases of folk-etymology it is difficult to see to what idea the corruption is due.¹ The mollusc called a *periwinkle* was in Anglo-Sax. *pinewincla*, which still survives in dialect as *penny-winkle*. It appears to have been influenced by the plant-name *periwinkle*, which is itself a corruption of Mid. Eng. *pervenke*, from Lat. *pervinca*; cf. Fr. *pervenche*. The material called *lutestring* was formerly *lustring*, Fr. *lustrine*, from its glossiness. A *wiseacre* is "one

¹ Perhaps it is the mere instinct to make an unfamiliar word "look like something." Thus Fr. *beaupré*, from Eng. *bowsprit*, cannot conceivably have been associated with a fair meadow; and *accomplice*, for *complice*, Lat. *complex*, *complic*-, can hardly have been confused with *accomplish*.

that knows or tells truth; we commonly use it in *malam partem* for a fool" (Blount, *Glossographia*, 1674). This comes, through Dutch, from Ger. *weissager*, commonly understood as *wise-sayer*, but really unconnected with *sagen*, to say. The Old High Ger. *wizago*, prophet, is cognate with Eng. *witty*. The military and naval word *ensign* is in Shakespeare corrupted, in both its meanings, into *ancient*. Thus Falstaff describes his tatterdemalion recruits as—

"Ten times more dishonourable ragged than an old-faced *ancient*."

(1 *Henry IV.*, iv. 2.)—

while *Ancient* Pistol is familiar to every reader. A *cordwainer*, from Old Fr. *cordouanier*, "a shoemaker, a *cordwainer*" (Cotgrave), worked with *cordouan*, "Cordovan leather; which is properly a goat's skin tanned." The modern French form *cordonnier* is due to association with *cordon*, a thong, bootlace, etc. *Witch-elm* has nothing to do with witches. It is for older *weech-elm*, *wiche-elm*, and belongs to Anglo-Sax. *wican*, to bend. *Service-tree* is a meaningless corruption of Mid. Eng. *serves*, an early loan-word from Lat. *sorbus*.

In the case of a double-barrelled word, folk-etymology usually affects one half only, e.g., *verdigris* is for Fr. *vert-de-gris*, for Old Fr. *vert de Grece*, Greek green. The reason for the name is unknown. Cotgrave calls it "Spanish green." Mid. English had the more correct *vertegresse* and *verte Grece* (*Promptorium Parvulorum*, 1440). The cavalry trumpet-call *boot and saddle* is for Fr. *boute-selle*, lit. "put saddle." *Court-card* is for *coat-card*, a name given to these cards from the dresses depicted on them. Florio has *carta di figura*, "a *cote carde*." The card-game called *Pope Joan* would appear to be in some way connected with *nain jaune*, lit. "yellow dwarf," its French name.

But occasionally the results of folk-etymology are literally *preposterous*.¹ The Fr. *choucroute* is from *sûrkrût*, a dialect pronunciation of Ger. *sauer-kraut*, sour cabbage, so that the first syllable, meaning "sour," has actually been corrupted so as to mean "cabbage." Another example, which I have never seen quoted, is the name of a beech-wood near the little town of Remilly in Lorraine. The trees of this wood are very old and curiously twisted, and they are called in French *les jolis fous*, where *fou* (Lat. *fagus*) is the Old French for "beech" (*fouet*, whip, is its diminutive).

¹ Lat. *præposterus*, from *præ*, before, and *posterus*, behind.

This is rendered in German as *tolle buchen*, mad beeches, the *fou* having been misunderstood as referring to the fantastic appearance of the trees.

Forlorn hope is sometimes used metaphorically as though the *hope* were of the kind that springs eternal in the human breast. In military language it means the leaders of a storming party—

“The *forlorn hope* of each attack consisted of a sergeant and twelve Europeans.” (*Wellington's Despatches*, 1799.)—

but was earlier used of soldiers in any way exposed to special danger. Cotgrave has *enfants perdus*, “perdus; or the *forlorn hope* of a campe (are commonly gentlemen of companies).” It is from obsolete Du. *verloren hoop*, where *hoop*, cognate with Eng. *heap*, is used for a band or company. In 16th-century German we find *ein verlorener haufe*. Both the Dutch and German expressions are obsolete in this sense.

The military phrase *to run the gauntlet* has no connexion with *gauntlet*, glove. The older form is *gantlope*—

“Some said he ought to be tied neck and heels; others that he deserved to *run the gantlope*.” (*Tom Jones*, vii. 1.)

It is a punishment of Swedish origin from the period of the Thirty Years' War. The Swedish form is *gat-lopp*, in which *gat* is cognate with Eng. *gate*, in its northern sense of “street,” and *lopp* with Eng. *leap* and Ger. *laufen*, to run.

The *press-gang* had originally nothing to do with “pressing.” When soldiers or seamen were engaged, they received earnest money called *prest-money*, i.e., an advance on “loan,” Old Fr. *prest* (*prêt*), and the engagement was called *presting* or *impresting*. Florio explains *soldato* (see p. 123), lit. “paid,” by “*prest* with paie as soldiers are.” The popular corruption to *press* took place naturally as the method of enlistment became more “pressing.”

The *black art* is a translation of Old Fr. *nigromancie*, “nigromancie, conjuring, the *black art*” (Cotgrave); but this is folk-etymology for *nécromancie*, Greco-Lat. *necromantia*, divination by means of the dead. The popular form *négromancie* still survives in French. To *curry favour* is a corruption of Mid. Eng. “to *curry favel*.” The expression is translated from French. Palsgrave has *curryfaveu*, a flatterer, “*estrille faveau*,” *estriller* (*étriller*) meaning “to curry (a horse).” *Faveau*, earlier *Fauvel*, is the name of a horse in the famous *Roman de Fauvel*, a satirical Old French poem of

the early 14th century. He symbolizes worldly vanity carefully tended by all classes of society. The name is a diminutive of Fr. *fauve*, tawny, cognate with Eng. *fallow* (deer). (See also p. 151, n.)

A very curious case of folk-etymology is seen in the old superstition of the *hand of glory*. This is understood to be a skeleton hand from the gallows which will point out hidden treasure—

“Now mount who list,
And close by the wrist
Sever me quickly the Dead Man’s fist.”
(INGOLDSBY, *The Hand of Glory*.)

It is simply a translation of Fr. *main de gloire*. But the French expression is a popular corruption of *mandragore*, from Lat. *mandragora*, the mandragore, or mandrake, to the forked roots of which a similar virtue was attributed, especially if the plant was obtained from the foot of the gallows.

Akin to folk-etymology is contamination, *i.e.*, the welding of two words into one. This can often be noticed in children, whose linguistic instincts are those of primitive races. I have heard a child, on her first visit to the Zoo, express great eagerness to see the *animals* (*camels* × *animals*), which, by the way, turned out to be the giraffes. A small boy who learnt English and German simultaneously evolved, at the age of two, the word *spam* (*sponge* × Ger. *schwamm*). In a college in the English Midlands, a student named *Constantine*, who sat next to a student named *Turpin*, once heard himself startlingly addressed by a lecturer as *Turpentine*. People who inhabit the frontier of two languages, and in fact all who are in any degree bilingual, must inevitably form such composites occasionally. The *h*-aspirate of Fr. *haut*, Lat. *altus*, high, can only be explained by the influence of Old High Ger. *hōh* (*hoch*). The poetic word *glaiive* cannot be derived from Lat. *gladius*, sword, which has given Fr. *glai*, an archaic name for the gladiolus. We must invoke the help of a Gaulish word *cladebo*, sword, which is related to Gaelic *clay-more*, big sword. It has been said that in this word the swords of Caesar and Vercingetorix still cross each other. In Old French we find *oreste*, a storm, combined from *orage* and *tempeste* (*tempête*). Fr. *orteil*, toe, represents the mixture of Lat. *articulus*, a little joint, with Gaulish *ordag*. A *battledore* was in Mid. English a washing-beetle, which is in Provençal *batedor*, lit. beater. Hence it seems that this is one of the very few Provençal words which passed directly into English during the period of our

occupation of Guienne. It has been contaminated by the cognate beetle.

Cannibal is from Span. *canibal*, earlier *caribal*, i.e., *Carib*, the *n* being perhaps due to contamination with Span. *canino*, canine, voracious. It can hardly be doubted that this word suggested Shakespeare's *Caliban*. *Seraglio* is due to confusion between the Turkish word *serai*, a palace, and Ital. *serraglio*, "an inclosure, a close, a padocke, a parke, a cloister or secluse" (Florio), which belongs to Lat. *sera*, a bolt or bar. *Anecdote* is a deliberate coinage ascribed to John Wilkes—

"When a man fell into his *anecdote*, it was a sign for him to retire from the world." (DISRAELI, *Lothair*, Ch. 28.)

In some cases it is impossible to estimate the different elements in a word. *Arbour* certainly owes its modern spelling to Lat. *arbor*, a tree, but it represents also Mid. Eng. *herbere*, *erbere*, which comes, through French, from Lat. **herbarium*. But this can only mean herb-garden, so that the sense development of the word must have been affected by *harbour*, properly "army-shelter," ultimately identical with Fr. *auberge* (p. 130). When Dryden wrote—

"Tardy of aid, *unseal* thy heavy eyes,
Awake, and with the dawning day arise."

(*The Cock and the Fox*, 247.)—

he was expressing a composite idea made up from the verb *seal*, Old Fr. *seeler* (*sceller*), Lat. *sigillare*, and *seel*, Old Fr. *ciller*, Vulgar Lat. **ciliare*, from *cilium*, eyelid. The latter verb, meaning to sew together the eyelids of a young falcon, was once a common word—

"Come, *seeling* night,
Scarf up the tender eye of pitiful day."

(*Macbeth*, iii. 2.)

The verb *fret* is Anglo-Sax. *fretan*, to eat away (cf. Ger. *fressen*). *Fret* is also used of interlaced bars in heraldry, in which sense it corresponds to Fr. *frette* with the same meaning; for this word, which also means ferrule, a Vulgar Lat. **ferritta* (*ferrum*, iron) has been suggested. When Hamlet speaks of—

"This majestical roof *fretted* with golden fire,"

(*Hamlet*, ii. 3.)—

is he thinking of *frets* in heraldry, or of *fretwork*, or are these two of

one origin? Why should *fret*, in this sense, not come from *fret*, to eat away, since *fretwork* may be described as the "eating away" of part of the material? Cf. *etch*, which comes, through Dutch, from Ger. *ätzen*, the factitive of *essen*, to eat. But the German for *fretwork* is *durchbrochene arbeit*, "broken-through" work, and Old Fr. *fret* or *frait*, Lat. *fractus*, means "broken." Who shall decide how much our *fretwork* owes to each of these possible etymons?

That form of taxation called excise, which dates from the time of Charles I., has always been unpopular. Andrew Marvell says that *Excise*—

"With hundred rows of teeth the shark exceeds,
And on all trades like cassowar she feeds."

Dr Johnson defines it as "a hateful tax levied upon commodities, and adjudged not by the common judges of property, but wretches hired by those to whom excise is paid," an outburst which Lord Mansfield considered "actionable." The name, like the tax, came from the Netherlands, where it was called *accijs*—

"'Twere cheap living here, were it not for the monstrous *excises* which are impos'd upon all sorts of commodities, both for belly and back." (HOWELL, *Letter from Amsterdam*, 1619.)

In modern Dutch it has become *accijns*, through confusion with *cijns*, tax (Lat. *census*; cf. Ger. *zins*, interest). But the Dutch word is from Fr. *accise*, which appears in medieval Latin as *accisia*, as though connected with "cutting" (cf. *tallage*, from Fr. *tailler*, to cut), or with the "incidence" of the tax. It is perhaps a perversion of Ital. *assisa*, "an imposition, or taxe, or assesment" (Torriano); but there is also an Old Fr. *aceis* which must be related to Lat. *census*.

When folk-etymology and contamination work together, the result is sometimes bewildering. Thus *equerry* represents an older *querry* or *quirry*, still usual in the 18th century. Among my books is—

"The Compleat Horseman, or Perfect Farrier, written in French by the Sieur de Solleysell, *Querry* to the Present King of France" (1702).

The modern spelling is due to popular association with Lat. *equus*. But this *querry* is identical with French *écurie*, stable, just as in Scottish the *post* often means the *postman*. And *écurie*, older *escurie*,

is from Old High Ger. *scura*¹ (*scheuer*, barn). The word used in modern French in the sense of our *equerry* is *écuyer*, older *escuyer*, Lat. *scutarius*, shield-bearer, whence our word *esquire*. This *écuyer* is in French naturally confused with *écurie*, so that Cotgrave defines *escuyrie* as "the stable of a prince, or nobleman; also, a *query*-ship; or the duties, or offices belonging thereto; also (in old authors) a *squire's* place; or, the dignity, title, estate of an *esquire*."

Ignorance of the true meaning of a word often leads to pleonasm. Thus *greyhound* means *hound-hound*, the first syllable representing Icel. *grey*, a dog.² *Peajacket* is explanatory of Du. *pij*, earlier *pye*, "py-gown, or rough gown, as souldiers and seamen wear" (Hexham). *On Greenhow Hill* means "on green hill hill," and *Buckhurst Holt Wood* means "beech wood wood wood," an explanatory word being added as its predecessor became obsolete. The second part of *salt-cellar* is not the same word as in *wine-cellar*. It comes from Fr. *salière*, "a salt-seller" (Cotgrave), so that the *salt* is unnecessary. We speak pleonastically of "*dishevelled* hair," while Old Fr. *deschevelé*, lit. dis-haired, now replaced by *échevelé*, can only be applied to a person, e.g., *une femme toute deschevelée*, "discheveled, with all her haire disorderly falling about her cares" (Cotgrave). The word *cheer* meant in Mid. English "face." Its French original *chère* scarcely survives except in the phrase *faire bonne chère*, lit. "make a good face," a meaning preserved in "to be of good *cheer*." In both languages the meaning has been transferred to the more substantial blessings which the pleasant countenance seems to promise, and also to the felicity resulting from good treatment. The true meaning of the word is so lost that we can speak of a "*cheerful* face," i.e., a face full of face.

But there are many words whose changes of form cannot be altogether explained by any of the influences that have been discussed in this and the preceding chapters. Why should *cervelas*, "a large kind of sausage, well season'd, and eaten cold in slices" (Kersey's *Eng. Dict.*, 1720), now be *saveloy*? We might invoke the initial letters of *sausage* to account for part of the change, but the *oy* remains a mystery. *Cervelas*, earlier *cervelat*, comes through French from Ital. *cervellato*, "a kinde of dry sausage" (Florio), said to have been originally made from pig's brains. For *hatchment* we find in the 16th century *achment*, and even *achievement*. It is archaic

¹ This etymology is, however, now regarded as doubtful, and it seems possible that Old Fr. *escurie* is really derived from *escuyer*.

² The latest research makes this dubious.

Fr. *hachement*, the ornamental crest of a helmet, etc., probably derived from Old Fr. *achemer*, variant of *acesmer*, to adorn. Hence both the French and English forms have an unexplained *h*-, the earlier *achment* being nearer the original. French *omelette* has a bewildering history, but we can trace it almost to its present form. To begin with, an *omelet*, in spite of proverbs, is not necessarily associated with eggs. The origin is to be found in Lat. *lamella*, a thin plate,¹ which gave Old Fr. *lamelle*. Then *la lamelle* was taken as *l'alamelle*, and the new *alamelle* or *alemelle* became, with change of suffix, *alemette*. By metathesis (see p. 51) this gave *amelette*, still in dialect use, for which modern French has substituted *omelette*. The *o* then remains unexplained, unless we admit the influence of the old form *auf-mollet*, a product of folk-etymology.

Counterpane represents Old Fr. *coute-pointe*, now corruptly *courte-pointe*, from Lat. *culcita puncta*, lit. "stitched quilt"; cf. Germ. *stepp-decke*, counterpane, from *steppen*, to stitch. In Old French we also find the corrupt form *contrepoincte* which gave Eng. *counterpoint*—

"In ivory coffers I have stuff'd my crowns;
In cypress chests my arras, *counterpoints*,
Costly apparel, tents and canopies."

(*Taming of the Shrew*, ii. 1)—

in modern English replaced by *counterpane*. Mid. English has also the more correct form *quilt-point*, from the Old Norman *cuiltte* (*pur*)*pointe*, which occurs in a 12th-century poem on St Thomas of Canterbury. The hooped petticoat called a *farthingale* was spelt by Shakespeare *fardingale* and by Cotgrave *vardingall*. This is Old Fr. *verdugalle*, of Spanish origin and derived from Span. *verdugo*, a (green) wand, because the circumference was stiffened with flexible switches before the application of whalebone or steel to this purpose. The *crinoline*, as its name implies, was originally strengthened with horse-hair, Lat. *crinis*, hair. To return to the *farthingale*, the insertion of an *n* before *g* is common in English (see p. 70, n. 2), but the change of the initial consonant is baffling.

¹ We have a parallel in Fr. *flan*, Eng. *flawn*, Ger. *fladen*, etc., a kind of omelet, ultimately related to Eng. *flat*—

"The feast was over, the board was clear'd,
The *flawns* and the custards had all disappear'd."

(INGOLDSBY, *Jackdaw of Rheims*.)

Cotgrave has *flans*, "flawnes, custards, eggpies; also, round planchets, or plates of metall."

DOUBLETS

The modern Fr. *vertugadin* is also a corrupt form. *Isinglass* seems to be an arbitrary perversion of obsolete Du. *huyzenblas* (*huisblad*), sturgeon bladder; cf. the cognate Ger. *hausenblase*.

Few words have suffered so many distortions as *liquorice*. The original is Greco-Lat. *glycyrrhiza*, lit. "sweet root," corrupted into Late Lat. *liquiritia*, whence Fr. *réglisse*, Ital. *legorizia*, *regolizia*, and Ger. *lakritze*. The Mid. English form *licoris* would appear to have been influenced by *orris*, a plant which also has a sweet root, while the modern spelling is perhaps due to *liquor*.

CHAPTER X

DOUBLETS

THE largest class of doublets is formed by those words of Latin origin which have been introduced into the language in two forms, the popular form through Anglo-Saxon or Old French, and the learned through modern French or directly from Latin. Obvious examples are *caitiff*, *captive*; *chieftain*, *captain*; *frail*, *fragile*. Lat. *discus*, a plate, quoit, gave Anglo-Sax. *disc*, whence Eng. *dish*. In Old French it became *deis* (*dais*), Eng. *dais*, and in Italian *desco*, "a deske, a table, a boord, a counting boord" (Florio), whence our *desk*. We have also the learned *disc* or *disk*, so that the one Latin word has supplied us with four vocables, differentiated in meaning, but each having the fundamental sense of a flat surface.

Dainty, from Old Fr. *deintié*, is a doublet of *dignity*. *Ague* is properly an adjective equivalent to *acute*, as in Fr. *fièvre aiguë*. The *paladins* were the twelve peers of Charlemagne's *palace*, and a Count *Palatine* is a later name for something of the same kind. One of the most famous bearers of the title, Prince Rupert, is usually called in contemporary records the *Palsgrave*, from Ger. *Pfalzgraf*, lit. palace count, Ger. *pfalz* being a very early loan from Lat. *palatium*. *Trivet*, Lat. *tripēs*, *tripēd-*, dates back to Anglo-Saxon, its "rightness" being due to the fact that a three-legged stool stands firm on any surface. In the learned doublets *tripod* and *tripos* we have the Greek form. *Spice*, Old Fr. *espice* (*épice*), is a doublet of *species*. The medieval merchants recognized four "kinds" of spice, viz., saffron, cloves, cinnamon, nutmegs.

THE ROMANCE OF WORDS

Coffin is the learned doublet of *coffer*, Fr. *coffre*, from Lat. *cophinus*. It was originally used of a basket or case of any kind, and even of a pie-crust—

"Why, thou say'st true; it is a paltry cap;
A custard-coffin, a bauble, a silken pic."

(*Taming of the Shrew*, iv. 3.)

Its present meaning is an attempt at avoiding the mention of the inevitable, a natural human weakness which has popularized in America the horrible word *casket* in this sense. The Greeks, fearing death less than do the moderns, called a coffin plainly *sarkophagos*, flesh-eater, whence indirectly Fr. *cercueil* and Ger. *sarg*.

The homely *mangle*, which comes to us from Dutch, is a doublet of the warlike engine called a *mangonel*—

"You may win the wall in spite both of bow and *mangonel*."

(*Ivanhoe*, Ch. 27.)—

which is Old French. The source is Greco-Lat. *manganum*, apparatus, whence Ital. *mangano*, with both meanings. The verb *mangle*, to mutilate, is unrelated.

Sullen, earlier *soleyn*, is a popular doublet of *solemn*, in its secondary meaning of glum or morose. In the early Latin-English dictionaries *solemn*, *soleyn* and *sullen* are used indifferently to explain such words as *acerbus*, *agelastus*, *vultuosus*. Shakespeare speaks of "customary suits of *solemn* black" (*Hamlet*, i. 2), but makes Bolingbroke say—

"Come, mourn with me for that I do lament,
And put on *sullen* black incontinent."

(*Richard II.*, v. 6.)—

while the "*solemn* curfew" (*Tempest*, v. 1) is described by Milton as "swinging slow with *sullen* roar" (*Penseroso*, l. 76). The meaning of *antic*, a doublet of *antique*, has changed considerably, but the process is easy to follow. From meaning simply ancient it acquired the sense of quaint or odd, and was applied to grotesque¹ work in art or to a fantastic disguise. Then it came to mean buffoon, in which sense Shakespeare applies it to grim death—

¹ *I.e.*, grotto painting, Ital. *grottesca*, "a kinde of rugged unpolished painters worke, anticke worke" (Florio).

DOUBLETS

"For within the hollow crown
That rounds the mortal temples of a king,
Keeps death his court; and there the *antic* sits,
Scoffing his state, and grinning at his pomp."

(*Richard II.*, iii. 2.)—

and lastly the meaning was transferred to the capers of the buffoon. From Old High Ger. *faltan* (*fallen*), to fold, and *stuel* (*stuhl*), chair, we get Fr. *fauteuil*. Medieval Latin constructed the compound *faldestolium*, whence our ecclesiastical *faldstool*, a litany desk. *Revel* is from Old Fr. *reveler*, Lat. *rebellare*, so that it is a doublet of *rebel*. Holyoak's *Latin Dictionary* (1612) has *revells or routs*, "concurus populi illegitimus." Its sense-development, from a riotous concourse to a festive gathering, has perhaps been affected by Fr. *réveiller*, to wake, whence *réveillon*, a Christmas Eve supper, or "wake." Cf. Ital. *veggia*, "a watch, a wake, a revelling a nights" (Florio).

The very important word *money* has acquired its meaning by one of those accidents which are so common in word-history. The Roman *mint* was attached to the temple of Juno *Moneta*, i.e., the admonisher, from *monere*, and this name was transferred to the building. The Romans introduced *moneta*, in the course of their conquests, into French (*monnaie*), German (*münze*) and English (*mint*). The French and German words still have three meanings, viz., mint, coin, change. We have borrowed the French word and given it the general sense represented in French by *argent*, lit. silver. The Ger. *geld*, money, has no connexion with *gold*, but is cognate with Eng. *yield*, as in "the *yield* of an investment," of which we preserve the old form in *wergild*, payment for having killed a man (Anglo-Sax. *wer*). To return to *moneta*, we have a third form of the word in *moidore*—

"And fair rose-nobles and broad *moidores*
The waiter pulls out of their pockets by scores."

(INGOLDSBY, *The Hand of Glory*).—

from Port. *moeda de ouro*, money of gold.

Sometimes the same word reaches us through different languages. Thus *charge* is French and *cargo* is Spanish, both belonging to a Vulgar Lat. **carricare* from *carrus*, vehicle. In old commercial records we often find the Anglo-Norman form *cark*, a load, burden, which survives now only in a metaphorical sense,

e.g., *carking*, i.e., burdensome, care. Lat. *domina* has given us through French both *dame* and *dam*¹ and through Spanish *duenna*, while Ital. *donna* occurs in the compound *madonna* and the *donah* of the East End costermonger. Lat. *datum*, given, becomes Fr. *dé* and Eng. *die* (plural *dice*). Its Italian doublet is *dado*, originally cubical pedestal, hence part of wall representing continuous pedestal. *Scrimmage* and *skirmish* are variant spellings of Fr. *escarmouche*, from Ital. *scaramuccia*, of German origin (see p. 55, n.). But we have also, more immediately from Italian, the form *scaramouch*. Blount's *Glossographia* (1674) mentions *Scaramoche*, "a famous Italian Zani (see p. 41), or mimick, who acted here in England, 1673." *Scaramouch* was one of the stock characters of the old Italian comedy, which still exists as the harlequinade of the Christmas pantomime, and of which some traces survive in the Punch and Judy show. He was represented as a cowardly braggart dressed in black. The golfer's *stance* is a doublet of the poet's *stanza*, both of them belonging to Lat. *stare*, to stand. *Stance* is Old French and *stanza* is Italian, "a *stance* or staffe of verses or songs" (Florio). A *stanza* is thus properly a pause or resting-place, just as a *verse*, Lat. *versus*, is a "turning" to the beginning of the next line.

Different French dialects have supplied us with many doublets. Old Fr. *chacier* (*chasser*), Vulgar Lat. **captiare*, for *captare*, a frequentative of *capere*, to take, was in Picard *cachier*. This has given Eng. *catch*, which is thus a doublet of *chase*. In *cater* (see p. 54) we have the Picard form of Fr. *acheter*, but the true French form survives in the family name *Chater*.² In Late Latin the neuter adjective *capitale*, capital, was used of property. This has given, through Old Fr. *chatel*, our *chattel*, while the doublet *catel* has given *cattle*, now limited to what was once the most important form of property. Fr. *cheptel* is still used of cattle farmed out on a kind of profit-sharing system. This restriction of the meaning of *cattle* is paralleled by Scot. *avers*, farm beasts, from Old Fr. *aveir*³ (*avoir*), property, goods. The history of the word *fee*, Anglo-Sax. *feoh*, cattle, cognate with Lat. *pecus*, whence *pecunia*, money, also takes us back to the times when a man's wealth was estimated by his flocks and herds; but, in this case, the sense-development is exactly reversed.

¹ See p. 98. The aristocracy of the horse is still testified to by the use of *sire* and *dam* for his parents.

² Sometimes this name is for *cheater*, *escheatour* (p. 71).

³ Cf. *avoirdupois*, earlier *avers de pois* (*poids*), goods sold by weight.

DOUBLETS

Fr. *jumeau*, twin, was earlier *gemeau*, still used by Corneille, and earlier still *gemel*, Lat. *gemellus*, diminutive of *geminus*, twin. From one form we have the *gimbals*, or twin pivots, which keep the compass horizontal. Shakespeare uses it of clockwork—

“I think, by some odd *gimmals*, or device,
Their arms are set like clocks, still to strike on.”

(1 *Henry VI.*, i. 2.)—

and also speaks of a *gimmel* bit (*Henry V.*, iv. 2). In the 17th century we find numerous allusions to *gimmel* rings (variously spelt). The toothsome *jumble*, known to the Midlands as “brandy-snap,” is the same word, this delicacy having apparently at one time been made in links. We may compare the obsolete Ital. *stortelli*, lit. “little twists,” explained by Torriano as “winding simnels, wreathed *jumbals*.”

An accident of spelling may disguise the origin and meaning of a word. *Tret* is Fr. *trait*, in Old French also *tret*, Lat. *tractus*, pull (of the scale). It was usually an allowance of four pounds in a hundred and four, which was supposed to be equal to the sum of the “turns of the scale” which would be in the purchaser’s favour if the goods were weighed in small quantities. *Trait* is still so used in modern French.

A difference in spelling, originally accidental, but perpetuated by an apparent difference of meaning, is seen in *flour*, *flower*; *metal*, *mettle*. *Flour* is the *flower*, i.e. the finest part, of meal, Fr. *fleur de farine*, “flower, or the finest meal” (Cotgrave). In the *Nottingham Guardian* (29th Aug. 1911) I read that—

“Mrs. Kernahan is among the increasing number of persons who do not discriminate between *metal* and *mettle*, and writes ‘Margaret was on her *metal*.’”

It might be added that this author is in the excellent company of Shakespeare—

“See whe’r their basest *metal* be not mov’d.”

(*Julius Caesar*, i. 1.)

There is no more etymological difference between *metal* and *mettle* than between the “temper” of a cook and that of a sword-blade.

Parson is a doublet of *person*, the priest perhaps being taken as “representing” the Church, for Lat. *persona*, an actor’s mask,

from *per*, through, and *sonare*, to sound,¹ was also used of a costumed character or *dramatis persona*. *Mask*, which ultimately belongs to an Arabic word meaning buffoon, has had a sense-development exactly opposite to that of *person*, its modern meaning corresponding to the Lat. *persona* from which the latter started. *Parson* shows the popular pronunciation of *er*, now modified by the influence of traditional spelling. We still have it in *Berkeley*, *clerk*, *Derby*, *sergeant*, as we formerly did in *merchant*. Proper names, in which the orthography depends on the "taste and fancy of the speller," or the phonetic theories of the old parish clerk, are often more in accordance with the pronunciation, e.g., *Barclay*, *Clark*, *Darby*, *Sargent*, *Marchant*. *Posy*, in both its senses, is a contraction of *poesy*, the flowers of a nosegay expressing by their arrangement a sentiment like that engraved on a ring. The latter use is perhaps obsolete—

"A hoop of gold, a paltry ring
That she did give me; whose *posy* was
For all the world like cutler's *poetry*
Upon a knife: 'Love me and leave me not.'"
(*Merchant of Venice*, v. 1.)

The poetic word *glamour* is the same as *grammar*, which had in the Middle Ages the sense of mysterious learning. From the same source we have the French corruption *grimoire*, "a booke of conjuring" (Cotgrave). *Glamour* and *gramarye* were both revived by Scott—

"A moment then the volume spread,
And one short spell therein he read;
It had much of *glamour* might."
(*Lay of the Last Minstrel*, iii. 9.)

"And how he sought her castle high,
That morn, by help of *gramarye*."
(*Ibid.*, v. 27.)

For the change of *r* to *l* we have the parallel of *frounce* for older *frounce* (p. 52). *Quire* is the same word as *quair*, in the "King's *Quair*," i.e., book. Its Mid. English form is *quayer*, Old Fr. *quaer*, *caer* (*cahier*), Vulgar Lat. **quaternum*, for *quaternio*, "a *quier* with four sheets" (Cooper).

¹ It is possible that this is a case of early folk-etymology and that *persona* is an Etruscan word.

DOUBLETS

Oriental words have sometimes come into the language by very diverse routes. *Sirup*, or *syrup*, *sherbet* and (*rum*)-*shrub* are of identical origin, ultimately Arabic. *Sirup*, which comes through Spanish and French, was once used, like *treacle* (p. 63), of medicinal compounds—

“Not poppy, nor mandragora,
Nor all the drowsy *syrups* of the world,
Shall ever medicine thee to that sweet sleep
Which thou ow’dst yesterday.”

(*Othello*, iii. 3.)

Sherbet and *shrub* are directly borrowed through the medium of travellers—

“‘I smoke on *srub* and water, myself,’ said Mr. Omer.”

(*David Copperfield*, Ch. 30.)

Sepoy, used of Indian soldiers in the English service, is the same as *spahi*, the French name for the Algerian cavalry. Both come ultimately from a Persian adjective meaning “military,” and the French form was at one time used also in English in speaking of Oriental soldiery—

“The Janizaries and *Spahies* came in a tumultuary manner to the Seraglio.” (HOWELL, *Familiar Letters*, 1623.)

Tulip is from Fr. *tulipe*, formerly *tulipan*, “the delicate flower called a *tulipa*, *tulipie*, or Dalmatian cap” (Cotgrave). It is a doublet of *turban*. The German *tulpe* was also earlier *tulipan*.

The humblest of medieval coins was the *maravedi*, which came from Spain at an early date, though not early enough for Robin Hood to have said to Isaac of York—

“I will strip thee of every *maravedi* thou hast in the world.”

(*Ivanhoe*, Ch. 33.)

The name is due to the Moorish dynasty of the *Almaravides* or *Marabouts*. This Arabic name, which means hermit, was given also to a kind of stork, the *marabout*, on account of the solitary and sober habits which have earned in India for a somewhat similar bird the name *adjutant* (p. 32).

Cipher and *zero* do not look like doublets, but both of them come from the same Arabic word. The medieval Lat. *zephyrum* connects the two forms. *Crimson* and *carmine*, both of them ultimately from

Old Spanish, are not quite doublets, but both belong to *kermes*, the cochineal insect, of Arabic origin.

The relationship between *cipher* and *zero* is perhaps better disguised than that between *veneer* and *varnish*, though this is by no means obvious. *Veneer*, spelt *fineer* by Smollett, is Ger. *firnieren* (now *furnieren*), from Fr. *vernir*, to varnish, as the German noun *firnis*, from Fr. *vernis*. This was used in Old French of various protective devices, such as the plating of a shield. The spelling *furnieren* is due to a fancied connexion with Fr. *fournir*, to furnish.

The doublets selected for discussion among the hundreds which exist in the language reveal many etymological relationships which would hardly be suspected at first sight. Many other words might be quoted which are almost doublets. Thus *sergeant*, Fr. *sergent*, Lat. *serviens*, *servient-*, is almost a doublet of *servant*, the present participle of Fr. *servir*. The fabric called *drill* or *drilling* is from Ger. *drillich*, "tick, linnen-cloth woven of three threads" (Ludwig). This is an adaptation of Lat. *trilix*, *trilic-*, which, through Fr. *treillis*, has given Eng. *trellis*. We may compare the older *twill*, of Anglo-Saxon origin, cognate with Ger. *zwilch* or *zwillich*, "linnen woven with a double thread" (Ludwig). *Robe*, from French, is cognate with *rob*, and with Ger. *raub*, booty, the conqueror decking himself in the spoils of the conquered. *Musk* is a doublet of *meg* in *nutmeg*, Fr. *noix muscade*. In Mid. English we find *note-mugge*, and Cotgrave has the diminutive *muguelle*, "a nutmeg"; cf. modern Fr. *muguet*, the lily of the valley. Fr. *dîner* and *déjeuner* both represent Vulgar Lat. **dis-junare*, to break fast, from *jejunus*, fasting. The difference of form is due to the shifting of the accent in the Latin conjugation, e.g., *dis-jundre* gives Old Fr. *disner* (*dîner*), while *dis-júnat* gives Old Fr. *desjune* (*déjeune*).

Admiral, earlier *amiral*, comes through French from the Arab. *amir*, an emir. Its Old French forms are numerous, and the one which has survived in English may be taken as an abbreviation of Arab. *amir al bahr*, emir on the sea. Greco-Lat. *pandura*, a stringed instrument, has produced an extraordinary number of corruptions, among which some philologists rank *mandoline*. Eng. *bandore*, now obsolete, was once a fairly common word, and from it, or from some cognate Romance form, comes the negro corruption *banjo*—

"'What is this, mamma? it is not a guitar, is it?' 'No, my dear, it is called a *banjore*; it is an African instrument, of which the negroes are particularly fond.'" (MARIA EDGEWORTH, *Belinda*, Ch. 18.)

DOUBLETS

Florio has *pandora*, *pandura*, "a musical instrument with three strings, a kit, a croude,¹ a rebecke." *Kit*, used by Dickens—

"He had a little fiddle, which at school we used to call a *kit*, under his left arm." (*Bleak House*, Ch. 14.)—

seems to be a clipped form from Old French dialect *quiterne*, for *guiterne*, Greco-Lat. *cithara*. Cotgrave explains *mandore* as a "*kitt*, small gitterne." The doublet *guitar* is from Spanish.

The two pretty words *dimity* and *samite*—

"An arm
Rose up from out the bosom of the lake,
Clothed in white *samite*, mystic, wonderful,
Holding the sword."

(TENNYSON, *Morte d'Arthur*, l. 29.)—

are both connected with Gk. *mitos*, thread. *Dimity* is the plural, *dimiti*, of Ital. *dimito*, "a kind of course cotton or flannel" (Florio), from Greco-Lat. *dimitus*, double thread (cf. *twill*, p. 118). *Samite*, Old Fr. *samit*, whence Ger. *samt*, velvet, is in medieval Latin *hexamitus*, six-thread; this is Byzantine Gk. *hexamitos*, whence also Old Slavonic *aksamitu*. The Italian form is *sciamito*, "a kind of sleeve, feret, or filosello silke" (Florio). The word *feret* used here by Florio is from Ital. *fioretto*, little flower. It was also called *floret* silk. Florio explains the plural *fioretti* as "a kind of course silke called *f[lor]et* or *ferret* silke," and Cotgrave has *fleuret*, "course silke, *floret* silke." This doublet of *floweret* is not obsolete in the sense of tape—

"'Twas so fram'd and express'd no tribunal could shake it,
And firm as red wax and black *ferret* could make it."

(INGOLDSBY, *The Housewarming*.)

Parish and *diocese* are closely related, *parish*, Fr. *paroisse*, representing Greco-Lat. *par-oikia* (Gk. *oikos*, a house), and *diocese* coming through Old French from Greco-Lat. *di-oikesis*. *Skirt* is the Scandinavian doublet of *shirt*, from Vulgar Lat. *ex-curtus*, which has also given us *short*. The form without the prefix appears in Fr. *court*, Ger. *kurz*, and the English diminutive *kirtle*—

"What stuff wilt have a *kirtle* of?"

(2 *Henry IV.*, ii. 4.)

These are all very early loan-words.

¹ See *Crowther*, p. 139.

A new drawing-room game for amateur philologists would be to trace relationships between words which have no apparent connexion. In discussing, some years ago, a lurid book on the "Mysteries of Modern London," *Punch* remarked that the existence of a *villa* seemed to be proof presumptive of that of a *villain*. This is etymologically true. An Old French *vilain*, "a villaine, slave, bondman, servile tenant" (Cotgrave), was a peasant attached to his lord's *ville* or domain, Lat. *villa*. For the degeneration in meaning we may compare Eng. *boor* and *churl* (p. 70), and Fr. *manant*, a clodhopper, lit. a dweller (see *manor*, p. 14). A *butcher*, Fr. *boucher*, must originally have dealt in goat's-flesh, Fr. *bouc*, goat; cf. Ital. *beccaio*, butcher, and *becco*, goat. Hence *butcher* and *buck* are related. The extension of meaning of *broker*, an Anglo-Norman form of *brocheur*, shows the importance of the wine-trade in the Middle Ages. A *broker* was at first¹ one who "broached" casks with a *broche*, which means in modern French both brooch and spit. The essential part of a *brooch* is the pin or spike.

When Kent says that Cornwall and Regan—

"Summon'd up their *meiny*, straight took horse."

(*Lear*, ii. 4.)—

he is using a common Mid. English and Tudor word, which comes, through Old Fr. *maisniee*, from Vulgar Lat. **mansionata*, a houseful. A *menial* is a member of such a body. An Italian cognate is *masnadiere*, "a ruffler, a swashbuckler, a swaggerer, a high way theefe, a hackster" (Florio). Those inclined to moralize may see in these words a proof that the arrogance of the great man's flunkey was curbed in England earlier than in Italy. Old Fr. *maisniee* is now replaced by *ménage*, Vulgar Lat. **mansionaticum*. A derivative of this word is *ménagerie*, first applied to the collection of household animals, but now to a "wild beast show."

A *bonfire* was formerly a *bone-fire*. We find *bane-fire*, "ignis ossium," in a Latin dictionary of 1483, and Cooper explains *pyra* by "*bone-fire*, wherein men's bodyes were burned." Apparently the word is due to the practice of burning the dead after a victory. Hexham has *bone-fire*, "cen *been-vier*, dat is, als men victorie brandt." *Walnut* is related to *Wales*, *Cornwall*, the *Walloons*, *Wallachia* and Sir William *Wallace*. It means "foreign" nut. This very widespread

¹ But the early use of the word in the sense of middle-man points to contamination with some other word of different meaning.

wal is supposed to represent the Celtic tribal name *Volcae*. It was applied by the English to the Celts, and by the Germans to the French and Italians, especially the latter, whence the earlier Ger. *welsche nuss*, for *walnuss*. The German Swiss use it of the French Swiss, hence the canton *Wallis* or *Valais*. The Old French name for the *walnut* is *noix gauge*, Lat. *Gallica*. The relation of *umbrella* to *umber* is pretty obvious. The former is Italian—

"A little shadow, a little round thing that women bare in their hands to shadow them. Also a broad brimd hat to keepe off heate and rayne. Also a kinde of round thing like a round skreene that gentlemen use in Italie in time of sommer or when it is very hote, to keepe the sunne from them when they are riding by the way." (Florio.)

*Umb*er is Fr. *terre d'ombre*, shadow earth—

"I'll put myself in poor and mean attire,
And with a kind of *umber* smirch my face."
(*As You Like It*, i. 3.)

Ballad, originally a dancing-song, Prov. *ballada*, is a doublet of *ballet*, and thus related to *ball*. We find a Late Lat. *ballare*, to dance, in Saint Augustine, but the history of this group of words is obscure. The sense-development of *carol* is very like that of *ballad*. It is from Old Fr. *carolle*, "a kinde of dance wherein many may dance together; also, a *carroll*, or Christmas song" (Cotgrave). The form *corolla* is found in Provençal, and *carolle* in Old French is commonly used, like Ger. *kranz*, garland, and Lat. *corona*, of a social or festive ring of people. Hence it seems a reasonable conjecture that the origin of the word is Lat. *corolla*, a little garland.

Many "chapel" people would be shocked to know that *chapel* means properly the sanctuary in which a saint's relics are deposited. The name was first applied to the chapel in which was preserved the *cape* or cloak of S Martin of Tours. The doublet *capel* survives in *Capel Court*, near the Exchange. Ger. *kapelle* also means orchestra or military band. *Tocsin* is literally "touch sign." Fr. *toquer*, to tap, beat, cognate with *touch*, survives in "tuck of drum" and *tucket*—

"Then let the trumpets sound
The *tucket* sonance and the note to mount."
(*Henry V.*, iv. 2.)—

while *sinet*, the diminutive of Old Fr. *sin*, sign, has given *sennet*,

common in the stage directions of Elizabethan plays in a sense very similar to that of *tucket*.

Junket is from Old Fr. *joncade*, "a certaine spoone-meat, made of creame, rose-water and sugar" (Cotgrave), Ital. *giuncata*, "a kinde of fresh cheese and creame, so called because it is brought to market upon rushes; also a *junket*" (Florio). It is thus related to *jonquil*, which comes, through French, from Span. *junquillo*, a diminutive from Lat. *juncus*, rush. The plant is named from its rush-like leaves. *Ditto*, Italian, lit. "said," and *ditty*, Old Fr. *dité*, are both past participles,¹ from the Latin verbs *dico* and *dicto* respectively. The *nave* of a church is from Fr. *nef*, still occasionally used in poetry in its original sense of ship, Lat. *navis*. It is thus related to *navy*, Old Fr. *navie*, a derivative of *navis*. Similarly Ger. *schiff* is used in the sense of *nave*, though the metaphor is variously explained.

The old word *cole*, cabbage, its north-country and Scottish equivalent *kail*, Fr. *chou* (Old Fr. *chol*) and Ger. *kohl*, are all from Lat. *caulis*, cabbage; cf. *cauli*-flower. We have the Dutch form in *colza*, which comes, through French, from Du. *kool-zaad*, cabbage-seed. *Cabbage* itself is Fr. *caboché*, a Picard derivative of Lat. *caput*, head. In modern French *caboché* corresponds to our vulgar "chump." A *goshawk* is a *goose-hawk*, so called from its preying on poultry. *Merino* is related to *mayor*, which comes, through French, from Lat. *maior*, greater. Span. *merino*, Vulgar Lat. **majorinus*, means both a magistrate and a superintendent of sheep-walks. From the latter meaning comes that of "sheepe driven from the winter pastures to the sommer pastures, or the wooll of those sheepe" (Percyvall). *Portcullis* is from Old Fr. *porte coulisse*, sliding door. Fr. *coulisse* is still used of many sliding contrivances, especially in connexion with stage scenery, but in the portcullis sense it is replaced by *herse* (see p. 63), except in the language of heraldry. The masculine form *coulis* meant a clear broth, or *cullis*, as it was called in English up to the 18th century. This suggests *colander*, which, like *portcullis*, belongs to Lat. *colare*, "to streine" (Cooper), whence Fr. *couler*, to flow.

Solder, formerly spelt *sowder* or *sodder*, and still so pronounced by the plumber, represents Fr. *soudure*, from the verb *souder*; cf. *batter* from Old Fr. *batture*, *fritter* from Fr. *friture*, and *tenter* (hooks)²

¹ But the usual Italian past participle is *detto*.

² Hooks used for stretching cloth or tapestry.

HOMONYMS

from Fr. *tenture*. Fr. *souder* is from Lat. *solidare*, to consolidate. Fr. *sou*, formerly *sol*, a halfpenny, comes, like Ital. *soldo*, from Lat. *solidus*, the meaning of which appears also in the Italian participle *soldato*, a soldier, lit. a paid man. This Italian word has passed into French and German as *soldat*, displacing the older cognates *soudard* and *söldner*, which now have a depreciatory sense. Eng. *soldier* is of Old French origin. It is represented in medieval Latin by *sol(i)darius*, glossed *sowdeor* in a vocabulary of the 15th century. As in *solder*, the *l* has been re-introduced by learned influence, but the vulgar *sodger* is nearer the original pronunciation.

CHAPTER XI

HOMONYMS

MODERN English contains some six or seven hundred pairs or sets of homonyms, *i.e.*, of words identical in sound and spelling but differing in meaning and origin. The *New English Dictionary* recognizes provisionally nine separate nouns *rack*. The subject is a difficult one to deal with, because one word sometimes develops such apparently different meanings that the original identity becomes obscured, and even, as we have seen in the case of *flour* and *mettle* (p. 115), a difference of spelling may result. When Denys of Burgundy said to the physician—

“Go to! He was no fool who first called you *leeches*.”

(*Cloister and Hearth*, Ch. 26.)—

he was unaware that both *leeches* represent Anglo-Sax. *læce*, healer. On the other hand, a resemblance of form may bring about a contamination of meaning. The verb to *gloss*, or *gloze*, means simply to explain or translate, from Greco-Lat. *glossa*, tongue; but, under the influence of the unrelated *glass*, superficial lustre, it has acquired the sense of specious interpretation.

That part of a helmet called the *beaver*—

“I saw young Harry, with his *beaver* on,
His cuisses on his thigh, gallantly arm’d,
Rise from the ground like feather’d Mercury.”

(1 *Henry IV.*, iv. 1.)—

THE ROMANCE OF WORDS

has, of course, no connexion with the animal whose fur has been used for some centuries for expensive hats. It comes from Old Fr. *bavière*, a child's bib, now replaced by *bavette*, from *baver*, to slobber.

It may be noted *en passant* that many of the revived medieval words which sound so picturesque in Scott are of very prosaic origin. Thus the *basnet*—

"My *basnet* to a prentice cap,
Lord Surrey's o'er the Till."

(*Marmion*, vi. 21.)—

or close-fitting steel cap worn under the ornamental helmet, is Fr. *bassinnet*, a little basin. It was also called a *kettle hat*, or *pot*. Another obsolete name given to a steel cap was a privy *pallet*, from Fr. *palette*, a barber's bowl, a "helmet of Mambrino." To the last German Emperor we owe the phrase "mailed fist," a translation of Ger. *gepanzerte faust*. *Panzer*, a cuirass, is etymologically a *pauncher*, or defence for the paunch. We may compare an article of female apparel, which took its name from a more polite name for this part of the anatomy, and which Shakespeare uses even in the sense of *panzer*. Imogen, taking the papers from her bosom, says—

"What is here?
The scriptures of the loyal Leonatus,
All turn'd to heresy? Away, away,
Corrupters of my faith! You shall no more
Be *stomachers* to my heart."

(*Cymbeline*, iii. 4.)

Sometimes homonyms seem to be due to the lowest type of folk-etymology, the instinct for making an unfamiliar word "look like something" (see p. 103, n.). To this instinct we owe the nautical *companion* (p. 131). *Trepan*, for *trapan*, to entrap, cannot have been confused with the surgical *trepan* (p. 89), although it has been assimilated to it. *Compound*, used throughout the East in the general sense of an enclosure, is the Malay word *kampung*.

The scent called *bergamot* takes its name from *Bergamo*, in Italy, whence also Shakespeare's *bergomask* dance—

"Will it please you to see the epilogue, or hear a *Bergomask* dance
between two of our company?"

(*Midsummer Night's Dream*, v. 1.)—

but the *bergamot* pear is derived from Turkish *beg armudi*, prince's

HOMONYMS

pear. With *beg*, prince, cf. *bey* and *begum*. The *burden* of a song is from Fr. *bourdon*, "a drone, or dorre-bee; also, the humming, or buzzing, of bees; also, the drone of a bag-pipe" (Cotgrave). It is of doubtful origin, but is not related to *burden*, a load, which is connected with the verb to *bear*.

To *cashier*, i.e., break, a soldier, is from Du. *casseeren*, which is borrowed from Fr. *casser*, to break, Lat. *quassare*, frequentative of *qualere*, to shatter. In the 16th and 17th centuries we also find *cass* and *cash*, which come immediately from French, and are thus doublets of *quash*. Cotgrave has *casser*, "to casse, cassere, discharge." The past participle of the obsolete verb to *cass* is still in military use—

"But the colonel said he must go, and he (the drum horse) was *cast* in due form and replaced by a washy, bay beast, as ugly as a mule."
(KIPLING, *The Rout of the White Hussars*.)

The other *cashier* is of Italian origin. He takes charge of the *cash*, which formerly meant "counting-house," and earlier still "safe," from Ital. *cassa*, "a merchant's *cashe*, or *counter*" (Florio). This comes from Lat. *capsa*, a coffer, so that *cash* is a doublet of *case*, Fr. *caisse*. The goldsmith's term *chase* is for *enchase*, Fr. *enchâsser*, "to *enchace*, or set, in gold, etc." (Cotgrave), from *châsse*, coffer, shrine, also from Lat. *capsa*. From the same word comes (window) *sash*.

Gammon, from Mid. Eng. *gamen*, now reduced to *game*, survives as a slang word and also in the compound *backgammon*. In a *gammon* of bacon we have the Picard form of Fr. *jambon*, a ham, an augmentative of *jambe*, leg. Cotgrave has *jambon*, "a *gammon*." *Gambit* is related, from Ital. *gambetto*, "a tripping up of one's heels" (Torriano). A *game leg* is in dialect a *gammy leg*. This is Old Fr. *gambi*, "bent, crooked, bowed" (Cotgrave), which is still used in some French dialects in the sense of lame. It comes from the same Celtic root as *jambe*.

Host, an army, now used only poetically or metaphorically, is from Old Fr. *ost*, army, Lat. *hostis*, enemy. The *host* who receives us is Old Fr. *oste* (*hôte*), Lat. *hospes*, *hospit-*, guest. These two *hosts* are, however, ultimately related. It is curious that, while modern Fr. *hôte* (*hospes*) means both "host" and "guest," the other *host* (*hostis*) is, very far back, a doublet of *guest*, the ground-meaning of both being "stranger." "It is remarkable in what opposite directions the Germans and Romans have developed the meaning

of the old hereditary name for 'stranger.' To the Roman the stranger becomes an enemy; among the Germans he enjoys the greatest privileges, a striking confirmation of what Tacitus tells us in his *Germania*.¹ In a dog-kennel we have the Norman form of Fr. *chenil*, related to *chien*; but *kennel*, a gutter—

"Go, hop me over every *kennel* home."

(*Taming of the Shrew*, iv. 3.)—

is a doublet of *channel* and *canal*.

"Oh villain! thou stolest a cup of sack eighteen years ago, and wert taken with the *manner*." (1 *Henry IV.*, ii. 4.)—

says Prince Hal to Bardolph. In the old editions this is spelt *manour* or *mainour* and means "in the act." It is an Anglo-French doublet of *manoeuvre*, Late Lat. *manu-opera*, handiwork, and is thus related to its homonym *manner*, Fr. *manière*, from *manier*, to handle. Another doublet of *manoeuvre* is *manure*, now a euphemism for dung, but formerly used of the act of tillage—

"The *manuring* hand of the tiller shall root up all that burdens the soil." (MILTON, *Reason of Church Government*.)

Inure is similarly formed from Old Fr. *enæwrer*, literally "to work in," hence to accustom to toil.

John Gilpin's "good friend the *calender*," i.e. the cloth-presser, has nothing to do with the *calender* which indicates the *calends* of the month, nor with the *calender*, or Persian monk, of the *Arabian Nights*, whom Mr Pecksniff described as a "one-eyed *almanack*"—

"'A one-eyed *calender*, I think, sir,' faltered Tom.

"'They are pretty nearly the same thing, I believe,' said Mr Pecksniff, smiling compassionately; 'or they used to be in my time.'" (Martin Chuzzlewit, Ch. 6.)

The verb to *calender*, to press and gloss cloth, etc., is from Old Fr. *calendrer* (*calandrer*), "to sleeke, smooth, plane, or polish, linnen cloth, etc." (Cotgrave). This word is generally considered to be related to *cylinder*, a conjecture which is supported by obsolete Fr. *calende*, used of the "rollers" by means of which heavy stones are moved.

¹ Kluge, *Etymologisches Wörterbuch*.

HOMONYMS

A craft, or association of *masters*, was once called a *mistry* (for *mastery* or *maistrie*), usually misspelt *mystery* by association with a word of quite different origin and meaning. This accidental resemblance is often played on—

“Painting, sir, I have heard say, is a *mystery*; but what *mystery* there should be in hanging, if I should be hanged, I cannot imagine.” (*Measure for Measure*, iv. 2.)

For the pronunciation, cf. *mister*, for *master*, and *mistress*.¹ The French for “mistry” is *métier*, earlier *mestier*, “a trade, occupation, *misterie*, handicraft” (Cotgrave), from Old Fr. *maistier*, Lat. *magisterium*. In its other senses Fr. *métier* represents Lat. *ministerium*, service.

Pawn, a pledge, is from Old Fr. *pan*, with the same meaning. The origin of this word, cognates of which occur in the Germanic languages, is unknown. The *pawn* at chess is Fr. *pion*, a pawn, formerly also a foot-soldier, used contemptuously in modern French for a junior assistant-master. This represents a Vulgar Lat. **pedo*, *pedon*-, from *pes*, foot; cf. Span. *peon*, “a footeman, a *pawne* at chesse, a pioner or laborer” (Percyvall). In German the *pawn* is called *bauer*, peasant, a name also given to the knave in the game of euchre, whence American *bower**—

“At last he put down a *right bower*³
Which the same Nye had dealt unto me.”
(BRET HARTE, *The Heathen Chinee*.)

When Jack Bunce says—

“If they hurt but one hair of Cleveland’s head, there will be the devil to *pay*, and no pitch hot.” (*Pirate*, Ch. 36.)—

he is using a nautical term which has no connexion with Fr. *payer*. To *pay*, i.e., to pitch (a ship), is from Old Fr. *peier* or *poier*, Lat. *picare*, from *pix*, pitch. Fr. *limon*, a lime, has given Eng. *lemon*,⁴ but “*lemon sole*” is from Fr. *limande*, a flat-fish, dab. A *quarry* from which stone is obtained was formerly *quarrer*, Old Fr. *quarrière* (*carrière*), a derivative of Lat. *quadrus*; cf. *quadratarius*, “a squarer of marble”

¹ Now abbreviated to *miss* in a special sense.

² The *Bowery* of New York was formerly a homestead.

³ Knave of trumps.

⁴ In modern French the lemon is called *citron* and the citron *cédrot*.

(Cooper). The *quarry* of the hunter has changed its form and meaning. In Mid. English we find *quarré* and *quirré*, from Old Fr. *cuirée*, now *curée*, "a (dog's) reward; the hounds' fees of, or part in, the game they have killed" (Cotgrave). The Old French form means "skinful" (cf. *poignée*, fistful), the hounds' reward being spread on the skin of the slain animal. It is thus related to *cuirass*, originally used of leathern armour. In Shakespeare *quarry* usually means a heap of dead game—

"Would the nobility lay aside their ruth,
And let me use my sword, I'd make a *quarry*
With thousands of these quarter'd slaves, as high
As I could pick my lance."

(*Coriolanus*, i. 1.)

In modern English it is applied rather to the animal pursued. Related to the first *quarry* is *quarrel*, the square-headed bolt shot from a crossbow—

"It is reported by William Brito that the arcubalista or arbalist was first shewed to the French by our king Richard the First, who was shortly after slain by a *quarrel* thereof." (CAMDEN, *Remains concerning Britain*.¹)

It comes from Old Fr. *carrel*, of which the modern form, *carreau*, is used of many four-sided objects, e.g., a square tile, the diamond at cards, a pane of glass. In the last sense both *quarrel* and *quarry* are still used by glaziers.

In a "school of porpoises" we have a Dutch word for crowd. The older spelling is *scull*—

"And there they fly, or die, like scaled *sculls*,
Before the belching whale."

(*Troilus and Cressida*, v. 5.)

A *sorrel* horse and the plant called *sorrel* are both French words of German origin. The adjective, used in venery of a buck of the third year, is a diminutive of Old Fr. *sor*, which survives in *hareng saur*, red herring, and is perhaps cognate with Eng. *sere*—

¹ In the chapter on "Artillery." So also, in the *Authorized Version*—"Jonathan gave his *artillery* [his bow and arrows] unto his lad, and said unto him, 'Go, carry them into the city.'" (1 Samuel xx. 40.) It is curious that the words *artillery* and *gun* both belong to the pre-gunpowder period.

HOMONYMS

"The *sere*, the yellow leaf."

(*Macbeth*, v. 3.)

The plant name is related to *sour*. Its modern French form *surette* occurs now only in dialect, having been superseded by *oseille*, which appears to be due to the mixture of two words meaning sour, sharp, viz., Vulgar Lat. **acetula* and Greco-Lat. *oxalis*.

The verb *tattoo*, to adorn the skin with patterns, is Polynesian. The military *tattoo* is Dutch. It was earlier *tap-to*, and was the signal for closing the "taps," or taverns. The first recorded occurrence of the word is in Colonel Hutchinson's orders to the garrison of Nottingham, the original of which hangs in the Nottingham City Library—

"If any-one shall bee found tiplinge or drinkeing in any taverne, inne, or alehouse after the houre of nyne of the clock at night, when the *tap-too* beates, he shall pay 2s. 6d." (1644.)

Cf. Ger. *zapfenstreich*, lit. tap-stroke, the name of a play which was produced some years ago in London under the title "Lights Out." Ludwig explains *zapfenschlag* or *zapfenstreich* as "die zeit da die soldaten aus den schencken heimgehen müssen, the *taptow*."

Tassel, in "*tassel* gentle"—

"O, for a falconer's voice,
To lure this *tassel*-gentle back again."

(*Romeo and Juliet*, ii. 2.)—

is for *tercel* or *tiercel*, the male hawk, "so tearmed, because he is, commonly, a third part less than the female" (Cotgrave, s.v. *tiercelet*). The true reason for the name is doubtful. The pendent ornament called a *tassel* is a diminutive of Mid. Eng. *tasse*, a heap, bunch, Fr. *tas*. *Tent* wine is Span. *vino tinto*, i.e., coloured—

"Of this last there's little comes over right, therefore the vintners make *Tent* (which is a name for all wines in Spain, except white) to supply the place of it." (Howell, *Familiar Letters*, 1634.)

The other *tent* is from the Old French past participle of *tendre*, to stretch.

The Shakesperian *utterance*—

"Rather than so, come, fate, into the list,
And champion me to the *utterance*."

(*Macbeth*, iii. 1.)—

is the Fr. *outrance*, in *combat à outrance*, i.e., to the extreme, which belongs to Lat. *ultra*. It is quite unconnected with the verb to *utter*, from *out*.

We have seen how, in the case of some homonyms, confusion arises, and a popular connexion is established, between words which are quite unrelated. The same sort of association often springs up between words which, without being homonyms, have some accidental resemblance in form or meaning, or in both. Such association may bring about curious changes in sound and sense. *Touchy*, which now conveys the idea of sensitiveness to *touch*, is corrupted from *tetchy*—

“*Tetchy* and wayward was thy infancy.”

(*Richard III.*, iv. 4.)

The original meaning was something like “infected, tainted,” from Old Fr. *teche* (*tache*), a spot. The word *surround* has completely changed its meaning through association with *round*. It comes from Old Fr. *suronder*, to overflow, Lat. *super-undare*, and its meaning and origin were quite clear to the 16th-century lexicographers. Thus Cooper has *inundo*, “to overflowe, to surround.” A French bishop carries a *crosse*, and an archbishop a *croix*. These words are of separate origin. From *crosse*, which does not mean “cross,” comes our derivative *crozier*, carried by both bishops and archbishops. It is etymologically identical, as its shape suggests, with the shepherd’s *crook* and the bat used in playing *lacrosse*.

The prophecy of the pessimistic *ostler*, that, owing to motor-cars—

“ ‘*Osses* soon will all be in the circusses,

And if you want an *ostler*, try the work’uses.”

(E. V. LUCAS.)—

shows by what association the meaning of *ostler*, Old Fr. *hostelier* (*hôtelier*), has changed. A *belfry* has nothing to do with *bells*. Old Fr. *berfroï* (*beffroï*) was a tower used in warfare. It comes from two German words represented by modern *bergen*, to hide, guard, and *friede*, peace, so that it means “guard-peace.” The triumph of the form *belfry* is due to association with *bell*, but the *l* is originally due to dissimilation, since we find *belfroï* also in Old French. The same dissimilation is seen in Fr. *auberge*, inn, Prov. *alberga*, which comes from Old High Ger. *hari*, an army, and *bergen*; cf. our *harbour* (p. 9) and *harbinger* (p. 75). *Scabbard* is from Old Fr. *escauberc*, earlier *escalberc*, by dissimilation for *escarberc*, from Old High Ger. *scar*, a

blade (*cf.* *ploughshare*), and *bergen*. *Cf.* *hauberk*, neck-guard, from Ger. *hals*,¹ neck.

The *buttery* is not so named from *butter*, but from *bottles*. It is for *butlery*, as *chancery* (*sec p.* 73) is for *chancelry*. It is not, of course, now limited to bottles, any more than the *pantry* to bread or the *larder* to bacon, Fr. *lard*, Lat. *laridum*. The *spence*, aphetic for *dispense*, is now known only in dialect—

“I am gaun to eat my dinner quietly in the *spence*.”

(*Old Mortality*, Ch. 3.)—

but has given us the name *Spencer*. The *still-room* maid is not extinct, but I doubt whether the *distilling* of strong waters is now carried on in the region over which she presides. A *journeyman* has nothing to do with *journeys* in the modern sense of the word, but works *à la journée*, by the day. *Cf.* Fr. *journalier*, “a journey man; one that workes by the day” (*Cotgrave*), and Ger. *tagelöhner*, literally “day-wager.” On the other hand, a *day-woman* (*Love’s Labour’s Lost*, i. 2) is an explanatory pleonasm (*cf.* *peajacket*, p. 109) for the old word *day*, servant, milkmaid, etc., whence the common surname *Day* and the derivative *dairy*.

A *briar* pipe is made, not from *briar*, but from the root of heather, Fr. *bruyère*, of Celtic origin. A *catchpole* did not catch *polls*, *i.e.*, heads, nor did he catch people with a *pole*, although a very ingenious implement exhibited in the Tower of London Armoury is catalogued as a *catchpole*. The word corresponds to a French compound *chasse-poule*, catch-hen, in Picard *cache-pole*, the official’s chief duty being to collect dues, or, in default, poultry. For *pole*, from Fr. *poule*, *cf.* *polecat*, also an enemy of fowls. The *companion-ladder* on shipboard is a product of folk-etymology. It leads to the *kampanje*, the Dutch for *cabin*. This may belong, like *cabin*, to a Late Lat. *capanna*, hut, which has a very numerous progeny. *Kajuit*, another Dutch word for cabin, earlier *kajute*, has given us *cuddy*.

A *carousal* is now regarded as a *carouse*, but the two are quite separate, or, rather, there are two distinct words *carousal*. One of them is from Fr. *carrousel*, a word of Italian origin, meaning a pageant or carnival with chariot-races and tilting. This word, obsolete in this sense, is sometimes spelt *el* and accented on the last syllable—

¹ Hence, or rather from Du. *hals*, the *hawse*-holes, the “throat” through which the cable runs.

"Before the crystal palace, where he dwells,
The armed angels hold their *carousels*."

(ANDREW MARVELL, *Lachrymae Musarum*.)

Ger. *karussell* means a roundabout at a fair. Our *carousal*, if it is the same word, has been affected in sound and meaning by *carouse*. This comes, probably through French, from Ger. *garaus*, quite out, in the phrase *garaus trinken*, i.e., to drink bumpers—

"The queen *carouses* to thy fortune, Hamlet."

(*Hamlet*, v. 2.)

Rabelais says that he is not one of those—

"Qui, par force, par oultrage et violence, contraignent les compaignons trinquer voyre *carous* et *alluz*¹ qui pis est."

(*Pantagruel*, iii., Prologue.)

The spelling *garous*, and even *garaus*, is found in 17th-century English.

It is perhaps unnecessary to say that a *maul-stick*, Dutch *maal-stok*, paint-stick, has nothing to do with the verb to *maul*, formerly to *mall*,² i.e., to hammer. Nor is the painter's *lay-figure* connected with our verb to *lay*. It is also, like so many art terms, of Dutch origin, the *lay* representing Du. *lid*, limb, cognate with Ger. *glied*.³ The German for lay-figure is *gliederpuppe*, joint-doll. Sewel's *Dutch Dict.* (1766) has *leeman*, or *ledeman*, "a statue, with pliant limbs for the use of a painter." A *footpad* is not a rubber-soled highwayman, but a *pad*, or robber, who does his work on foot. He was also called a *padder*—

"'Ye crack-rope *padder*, born beggar, and bred thief!' replied the hag." (*Heart of Midlothian*, Ch. 29.)—

i.e., one who takes to the "road," from Du. *pad*, path. *Pad*, an ambling nag, a "roadster," is the same word.

Pen comes, through Old French, from Lat. *penna*, "a penne, quill, or fether" (Cooper), while *pencil* is from Old Fr. *pincel* (*pinceau*), a painter's brush, from Lat. *penicillus*, a little tail. The modern meaning of *pencil*, which still meant painter's brush in the 18th century, is due to association with *pen*. The older sense

¹ Ger. *all aus*, all out.

² Hence the *Mall* and *Pall-Mall*, where games like croquet were played.

³ The *g-* represents the Old High German prefix *gi-*, *ge-*. Cf. Eng. *luck* and Ger. *glück*.

survives in optics and in the expression "pencilled eyebrows." The *ferrule* of a walking-stick is a distinct word from *ferule*, an aid to education. The latter is Lat. *ferula*, "an herbe like big fenell, and maye be called fenell giant. Also a rodde, sticke, or paulmer, wherewith children are stricken and corrected in schooles; a cane, a reede, a walking staffe" (Cooper). *Ferrule* is a perversion of earlier *virrel*, *virrol*, Fr. *virole*, "an iron ring put about the end of a staffe, etc., to strengthen it, and keep it from riving" (Cotgrave).

The modern meaning of *pester* is due to a wrong association with *pest*. Its earlier meaning is to hamper or entangle—

"Confined and *pestered* in this pinfold here."

(*Comus*, l. 7.)

It was formerly *impester*, from Old Fr. *empestrer* (*emphêtrer*), "to *pester*, intricate, intangle, trouble, incumber" (Cotgrave), originally to "hobble" a grazing horse with *pasterns*, or shackles (see *pastern*, p. 64).

Mosaic work is not connected with *Moses*, but with the *muses* and *museum*. It comes, through French, from Ital. *mosaico*, "a kinde of curious stone worke, of divers colours, checkie worke" (Florio), which is Vulgar Lat. *mosaicum opus*. *Sorrow* and *sorry* are quite unrelated. *Sorrow* is from Anglo-Sax. *sorg*, *sorh*, cognate with Ger. *sorge*, anxiety. *Sorry*, Mid. Eng. *sori*, is a derivative of *sore*, cognate with Ger. *sehr*, very, lit. "painfully"; cf. English "*sore* afraid," or the modern "*awfully* nice," which is in South Germany *arg nett*, "vexatiously nice."

It is probable that *vagabond*, Lat. *vagabundus*, has no etymological connexion with *vagrant*, which appears to come from Old Fr. *waucrant*, present participle of *waucrer*, a common verb in the Picard dialect, perhaps related to Eng. *walk*. Cotgrave spells it *vaucrier*, "to range, roame, vagary, wander, idly (idle) it up and down." Cotgrave also attributes to it the special meaning of a ship sailing "whither wind and tide will carry it," the precise sense in which it is used in the 13th-century romance of *Aucassin et Nicolette*.

Other examples of mistaken association are *scullion* and *scullery* (p. 39), and *sentry* and *sentinel* (p. 84). Many years ago *Punch* had a picture by Du Maurier called the "*Vikings of Whitby*," followed by a companion picture, the "*Viqueens*." The word is not *vi-king* but *vik-ing*, the first syllable probably representing an Old Norse form of Anglo-Sax. *wīc*, encampment.

CHAPTER XII

FAMILY NAMES

IN the study of family names we come across very much the same phenomena as in dealing with other words. They are subject to the same phonetic accidents and to the distortions of folk-etymology, being "altered strangely to significative words by the common sort, who desire to make all to be significative" (Camden, *Remains concerning Britain*). Doublets and homonyms are of frequent occurrence, and the origin of some names is obscured by the well-meaning efforts of early philologists. It might be expected that a family name would by its very nature tend to preserve its original form. This is, however, not the case. In old parish registers one often finds on one page two or three different spellings for the same name, and there are said to be a hundred and thirty variants of *Mainwaring*.¹ The telescoped pronunciation of long names such as Cholmondeley, Daventry, Marjoribanks, Strachan is a familiar phenomenon, and very often the shorter form persists separately, e.g., *Posnett* and *Poslett* occur often in Westmoreland for *Postlethwaite*; *Beecham* exists by the side of *Beauchamp*; *Saint-Clair* and *Saint-Maur* are usually reduced to *Sinclair* and *Seymour*; *Boon*² and *Moon* disguise the aristocratic *Bohun* and *Mohun*. In a story by H. G. Wells, *Miss Winchelsea's Heart*, the name *Snooks* is gradually improved to *Sevenoaks*, from which in all probability it originally came, via *Senoaks*; cf. *sennight* for *seven-night*, and such names as *Fiveash*, *Twelvetrees*, etc. Folk-etymology converts *Arblaster*, the cross-bowman, into *Alabaster*, *Thurgod* into *Thoroughgood*, and the Cornish *Hannibal* into *Honeyball*. *Beaufoy* is a grammatical monstrosity. Its older form is *Beaufou*, fine beech (see p. 104), with an ambiguous second syllable. *Malthus* looks like Latin, but is identical with *Malthouse*, just as *Bellows* is for *Bellhouse*, *Loftus* for *Lofthouse*, and *Bacchus*, fined for intoxication, 5 Jan. 1911, for *Bakehouse* or *Backhouse*. But many odd names which are often explained as corruptions may also have their face-value. The first

¹ This is probably the record for a proper name, but does not by any means equal that of the word *cushion*, of the plural of which about four hundred variants are found in old wills and inventories.

² Another origin of this name is Fr. *le bon*.

FAMILY NAMES

Gotobed was a sluggard, *Godbehere* was fond of this pious form of greeting, and *Goodbeer* purveyed sound liquor. With *Toogood*, perhaps ironical, we may compare Fr. *Troplong*, and with *Good-enough* a lady named *Belle-assez*, often mentioned in the Pipe Rolls. *Physick* occurs as a medieval nickname.

Family names fall into four great classes, which are, in descending order of size, local, baptismal, functional and nicknames. But we have a great many homonyms, names capable of two or more explanations. Thus *Bell* may be for Fr. *le bel* or from a shop-sign, *Collet* a diminutive of *Nicholas* or an aphetic form of *acolyte*. *Dennis* is usually for *Dionysius*, but sometimes for *le Danois*, the Dane; *Gillott*, and all family names beginning with *Gill-*, may be from *Gillian* (see p. 42), or from Fr. *Guillaume*. A famous member of the latter family was *Guillotin*, the humanitarian doctor who urged the abolition of clumsy methods of decapitation. His name is a double diminutive, like Fr. *diablotin*, goblin. *Leggatt* is a variant of *Lidgate*, swing-gate, and of *Legate*. *Lovell* is an affectionate diminutive or is for Old Fr. *louvel*, little wolf. It was also in Mid. English a dog's name, hence the force of the rhyme—

"The Rat [Ratcliffe], the Cat [Catesby], and *Lovell*, our dog,
Rule all England under the Hog." (1484.)

It has a doublet *Lowell*. The name *Turney*, well-known in Nottingham, is from the town of *Tournai*, or is aphetic for *attorney*. In the following paragraphs I generally give only one source for each name, but it should be understood that in many cases two or more are possible. The forms also vary.

Baptismal names often give surnames without any suffix. Sometimes these are slightly disguised, e.g., *Cobbett* (Cuthbert), *Garrett* (Gerard), *Hammond*, Fr. *Hamon* (Hamo), *Hibbert* (Hubert), *Jessop* (Joseph), *Neil* (Nigel), *Custance* (Constance); or they preserve a name no longer given baptismally, e.g., *Aldridge* (Alderic), *Bardell* (Bardolph), *Goodeve* (Godiva), *Goodlake* (Guthlac), *Goodrich* (Goderic), *Harvey*¹ (Hervey, Fr. *Hervé*), *Mayhew* (Old Fr. *Mahieu*,

¹ "The last two centuries have seen the practice made popular of using surnames for baptismal names. Thus the late Bishop of Carlisle was Harvey Goodwin, although for several centuries Harvey has been obsolete as a personal name" (BARDSLEY). Camden already complains that "surnames of honourable and worshipful families are given now to mean men's children for Christian names." Sixty years ago there was hardly a more popular name than *Percy*, while at the present day the admonition, "Be'ave yerself, 'Oward," is familiar to the attentive ear.

Matthew). With the help of diminutive suffixes we get *Atkin* (Adam), *Bodkin* (Baldwin), *Larkin* (Lawrence), *Perkin*, *Parkin* (Peter), *Hackett* (Haco), *Huggin*, *Hutchin*, *Hewett*, *Hewlett*, *Howitt* (Hugh), *Philpot* (Philip), *Tibbet* (Theobald or Isabella), *Tillett* (Matilda), *Wilmot* (William), *Wyatt* (Guy), *Gilbey*, *Gibbon* (Gilbert), etc., with numerous variants and further derivatives. The changes that can be rung on one favourite name are bewildering, e.g., from *Robert* we have *Rob*, *Dob*, *Hob* and *Bob*; the first three with a numerous progeny, while *Bob*, now the favourite abbreviation, came into use too late to found a large dynasty. From *Richard* we have *Richards* and *Richardson*, and from its three abbreviations *Rick*, *Dick*, *Hick*, with their variants *Rich*, *Digg*, *Hig*, *Hitch*, one of the largest families of surnames in the language.¹ As the preceding examples show, family names are frequently derived from the mother. Other examples, which are not quite obvious, are *Belts* (Beatrice), *Sisson* (Cecilia), *Moxon* and *Padgett* (Margaret, Moggy, Madge, Padge), *Parnell* (Petronilla), *Ibbotson* (Ib, Isabella), *Tillotson* (Matilda). One group of surnames is derived from baptismal names given according to the season of the Church. Such are *Pentecost*, *Pascal*, whence Cornish *Pascoe*, *Nowell* and *Middlemass*, a corruption of *Michaelmas*.² With these may be grouped *Loveday*, a day appointed for reconciliations.

Surnames derived from place of residence often contain a preposition, e.g., *Atwood*, *Underhill*, and sometimes the article as well, e.g., *Atterbury*, *Bythesea*. In *Surtees*, on the Tees, we have a French preposition and an English river name. Sometimes they preserve a word otherwise obsolete. *Barton*, a farmyard, originally a barley-field, has given its name to about thirty places in England, and thus, directly or indirectly, to many families. *Bristow* preserves what was once the regular pronunciation of *Bristol*. The famous north country name *Peel* means castle, as still in the Isle of Man. It is Old Fr. *pel* (*pal*), stake, and the name was originally given to a wooden hill-fort or stockade.

Many places which have given family names have themselves

¹ It is even possible that *Hudd*, *Hudson* sometimes belong here, as *Hudd* appears to have been used as a North Country alternative for *Richard*, though it is hard to see why. For proofs see BARDSLEY, *Dict. of English Surnames*, s.v. *Hudd*.

² Such a corruption, though difficult to explain phonetically, is not without example in uneducated or childish speech. Cf. *tiddlebat* or *tittlebat*, for *stickleback*. In *stickler* (p. 63) we have the opposite change.

disappeared from the map, while others, now of great importance, are of too recent growth to have been used in this way. Many of our family names are taken from those of continental towns, especially French and Flemish. Camden says, "Neither is there any village in Normandy that gave not denomination to some family in England." Such are *Bullen* or *Boleyn* (Boulogne), *Cullen* (Cologne), *Challis* (Calais), *Challen* (Châlon), *Chaworth* (Cahors), *Bridges*¹ (Bruges), *Druce* (Dreux), *Gaunt* (*Gand*, Ghent), *Lubbock* (Lübeck), *Luck* (*Luick*, Liège), *Mann* (le Mans), *Malins* (Malines, Mechlin), *Nugent* (Nogent), *Hawtrey* (Hauterive) and *Dampier* (Dampierre). To decide which is the particular *Hauterive* or *Dampierre* in question is the work of the genealogist. *Dampierre* (*Dominus Petrus*) means *Saint Peter*. In some cases these names have been simplified, e.g., Camden notes that *Conyers*, from *Coigniers*, lit. quince-trees, becomes *Quince*.

French provinces have given us *Burgoyne*, *Champaign*. *Gascoyne* or *Gaskin* and *Mayne*, and adjectives formed from names of countries, provinces and towns survive in *Allman* (*Allemand*), *Brabazon* (*le Brabançon*, the Brabanter), *Brett* (*le Bret* or *le Breton*²), *Pickard* (*le Picard*), *Poidevin*³ (*le Poitevin*), *Mansell*, Old Fr. *Mancel* (*le Manceau*, inhabitant of Maine or le Mans), *Hanway* and *Hannay* (*le Hannuyer*, the Hainaulter), *Loring* (*le Lorrain*), assimilated to *Fleming*, *Champneys* (*le Champenois*), with which we may compare *Cornwallis*, from the Old French adjective *cornwaleis*, man of Cornwall. To these may be added *Pollock*, which may occasionally mean the Pole, or *Polack*—

"Why then the *Polack* never will defend it."

(*Hamlet*, iv. 4.)—

Janaway, the Genocse, and *Haunce*, from the famous *Hanse* confederation. *Morris* means sometimes *Moorish* (see p. 44), and *Norris*, besides having the meaning seen in its contracted form *nurse*, Fr. *nourrice*, may stand for *le Noreis*, the Northener. We still have a *Norroy* king-at-arms, lit. north king, who holds office north of the Trent.

In some cases the territorial *de* remains, e.g., *Dolman* is some-

¹ Of course also of English origin.

² Hence also the name *Britton*.

³ Whence the perversion *Portwine*, examples of which occur in the *London Directory*.

times the same as *Dalmain*, *d'Allemagne*, *Daubeney* is *d'Aubigné*, *Danvers* is *d'Anvers* (Antwerp), *Devereux* is *d'Évreux*, a town which takes its name from the *Eburovices*, and *Disney* is *d'Isigny*. With these may be mentioned *Dubberley*, Fr. *du Boulay*, of the birch wood, and *Dawnay*, from Old Fr. *aunai*,¹ a grove of alders. The last governor of the *Bastille* was the Marquis de *Launay* (*l'aunai*). There is a large group of such words in French, coming from Latin collectives in *-etum*; *d'Aubray* is from Lat. *arboretum*, and has given also the dissimilated form *Darblay*, famous in English literature. Other examples are *Chesney*, *Chancy*, etc., the oak-grove,² *Pomeroiy*, the apple-garden.

Names of French origin are particularly subject to corruption and folk-etymology. We have the classic example of *Tess Durbeyfield*.³ Camden, in his *Remains concerning Britain*, gives, among other curious instances, *Troublefield* for *Turberville*. *Greenfield* is usually literal (cf. *Whitfield*, *Whittaker*, *Greenacre*, etc.), but occasionally for *Grenville*, as *Summerfield* is for *Somerville*. The notorious *Dangerfield* was of Norman ancestry, from *Angerville*. *Mullins* looks a very English name, but it is from Fr. *moulin*, mill, as *Musters* is from Old Fr. *moustier*, monastery. *Phillimore* is a corruption of *Finnemore*, Fr. *fin amour*.

When we come to names which indicate office or trade, we have to distinguish between those that are practically nicknames, such as *King*, *Duke*, *Bishop*, *Caesar*⁴ (Julius Caesar was a famous cricketer of the old school), and those that are to be taken literally. Many callings now obsolete have left traces in our surnames. The very common name *Chapman* reminds us that this was once the general term for a dealer (see p. 57), one who spends his

¹ Old Fr. *vernai*, whence our *Verney*, *Varney*, has the same meaning; cf. *Duverney*, the name of a famous dancer. Old Fr. *verne*, alder, is of Celtic origin.

² Cf. *Chenevix*, old oak, a name introduced by the Huguenots.

³ Other examples quoted by Hardy are *Priddle*, from *Paridelle*, and *Debbyhouse*—"The *Debbyhouses* who now be carters were once the *de Bayeux* family" (*Tess of the d'Urbervilles*, v. 35). But these are dubious.

⁴ These names are supposed to have been generally conferred in consequence of characters represented in public performances and processions. In some cases they imply that the bearer was in the employment of the dignitary. We find them in other languages, e.g., Fr. *Leroy*, *Leduc*, *Lévêque*; Ger. *König*, *Herzog*, *Bischof*. *Lévêque* has given Eng. *Levick*, *Vick* and (Trotty) *Veck*.

time in *chaffering* or "*chopping* and changing." The *grocer*, or *engrosser*, i.e., the man who bought wholesale, Fr. *en gros*,¹ came too late to supplant the family name *Spicer*. *Bailey*, Old Fr. *bailif* (*bailli*), represents all sorts of officials from a Scotch magistrate to a man in possession. *Bayliss* seems to be formed from it like *Williams* from *William*. *Chaucer*, Old Fr. *chaucier*, now replaced by *chaussetier*, "a hosier, or hosemaker" (Clotgrave), is probably obsolete as an English surname. Mr *Homer's* ancestors may have made helmets, Fr. *heaume*. *Jenner* is for *engenour*, engineer (see *gin*, p. 56). In *Ferrier* traditional spelling seems to have triumphed over popular pronunciation (*farrier*), but the latter appears in *Farrar*. *Chaucer's* *somonour* survives as *Sumner*. *Ark* was once a general name for a bin, hence the name *Arkwright*. Nottingham still has a *Fletcher Gate*, *Lister Gate* and *Pilcher Gate*. It is not surprising that the trade of the *fletcher*, Old Fr. *fleschier* (*Fléchier*), arrow-maker, should be obsolete. The *Fletchers* have absorbed also the *fleshers*, i.e., butchers, which explains why they so greatly outnumber the *Bowyers* (see p. 140), *Boyers*, etc. *Lister*, earlier *littester*, gave way to *dighester*, whence the name *Dexter*, well known in Nottingham, and this is now replaced by *dye*. A *Pilcher* made *pilches*, or mantles; cf. the cognate Fr. name *Pelissier*, a maker of *pelisses*.² *Kiddier* was once equivalent to pedlar, from *kid*, a basket. Sailors still speak of the bread-*kid*. For the name *Wait*, see p. 64. The ancestor of the *Poyser* family made scales (*poises*), or was in charge of a public balance. *Faulkner*, falconer, *Foster*, *Forster*, forester, and *Warner*, warrenner, go together. With the contraction of *Warner* we may compare *Marner*, mariner. *Crowther* means fiddler. The obsolete *crowd*, a fiddle, is of Celtic origin. It gave Old Fr. *rote*, the name of the instrument played by the medieval minstrels—

"Saxon minstrels and Welsh bards were extracting mistuned dirges from their harps, *crowds* and *rotes*." (*Ivanhoe*, Ch. 41.)

Kemp is an old English word for warrior, champion. It represents, like Ger. *kämpfen*, to fight, a very early loan from Lat. *campus*, in the sense of battle-field.

¹ *Gross*, twelve dozen, seems to be of Germanic origin, the duodecimal hundred, Ger. *grosshundert*, being Norse or Gothic. But Ger. *grosshundert* means 120 only.

² *Surplice*, Old Fr. *surpelis*, is a compound of the same word. It was worn "over fur" in unheated medieval churches.

Pinder, the man in charge of the pound or pinfold, was the name of a famous wicket-keeper of the last century. The still more famous cricketing name of *Trumper* means one who blows the trump. Cf. *Horner* and *Corner*, which have, however, alternative origins, a maker of horn cups and a *coroner*¹ respectively. A dealer in *shalloon* (see p. 43) was a *Chaloner* or *Chawner*. *Parminster*, a tailor, is as obsolete as its Old French original *parmentier*, a maker of *parements*, deckings, from *parer*, Lat. *parare*, to prepare. A member of the *Parmentier* family popularized the cultivation of the potato in France just before the Revolution, hence *potage Parmentier*, potato soup. The *white tawer* still plies his trade, but is hardly recognizable in *Whittier*. *Massinger* is a corruption of *messenger*. The *Todhunter*, or foxhunter, used to get twelve pence per fox-head from the parish warden. *Coltman* is simple, but *Runciman*, the man in charge of the *runcies* or *rouncies*, is less obvious. *Rouncy*, a nag, is a common word in Mid. English. It comes from Old Fr. *roncin* (*roussin*), and is probably a derivative of Ger. *ross*, horse. The Spanish form is *rocin*, "a horse or jade" (Minshcu, 1623), whence Don Quixote's charger *Rocin-ante*, "a jade formerly."

A park-keeper is no longer called a *Parker*, nor a maker of palings and palissades a *Palliser*. An English sea-king has immortalized the trade of the *Frobisher*, or furbisher, and a famous bishop bore the appropriate name of *Latimer*, for *Latiner*. With this we may compare *Lorimer*, for *loriner*, harness-maker, a derivative, through Old French, of Lat. *lorum*, "a thong of leather; a collar or other thing, wherewith beastes are bounden or tyed; the reyne of a brydle" (Cooper). The *Loriners* still figure among the London City Livery Companies, as do also the *Bowyers*, *Broderers*, *Fletchers* (see p. 139), *Horners* (see p. 140), *Pattenmakers*, *Poulters* and *Up-holders* (see p. 54). *Scriven*, Old Fr. *escrivain* (*écrivain*), is now usually extended to *Scrivener*. For *Cator* see p. 54. In some of the above cases the name may have descended from a female, as we have not usually a separate word for women carrying on trades generally practised by men. In French there is a feminine form for nearly every occupation, hence such names as *Labouchère*, the lady butcher, or the butcher's wife.

The meaning of occupative names is not always on the surface. It would, for instance, be rash to form hasty conclusions as to the pursuits of Richard *Kisser*, whose name occurs in medieval

¹ Another, and commoner, source of the name is from residence at a "corner."

London records. He probably made *cuisse*s,¹ thigh armour, Fr. *cuisse*, thigh, Lat. *coxa*. A *Barker* employed bark for tanning purposes. *Booker*, scribe, may also be a doublet of *Butcher*. A *Cleaver* was a mace-bearer, Old Fr. *clavier* (*Clavier* is a common family name in France), from Lat. *clava*, a club. He may, however, have sometimes been a porter, as Old Fr. *clavier* also means key-bearer, Lat. *clavis*, a key. A *Croker*, or *Crocker*, sold *crocks*, i.e., pottery. A *Lander*, or *Launder*, was a washer-man, Fr. *lavandier*. A *Sloper* made "slops," i.e., loose upper garments, overalls. A *Reeder* or *Reader* thatched with reeds. A *Walker* walked, but within a circumscribed space. He was also called a *Fuller*, Fr. *fouler*, to trample, or a *Tucker*, from a verb which perhaps meant once to "tug" or "twitch." In the following passage some manuscripts have *toukere* for *walkere*—

"And his clothis ben maad schyninge and white ful moche as snow, and which maner clothis a *fullere*, or *walkere* of cloth, may not make white on erthe." (WYGLIF, *Mark*, ix. 2.)

The fuller is still called *Walker* in Germany. *Banister* is a corruption of *balestier*, a cross-bow man; cf. *banister* for *baluster* (p. 52).

Some of the occupative names in *-ward* and *-herd* are rather deceptive. *Hayward* means hedge² guard. *Howard* is phonetically the Old French name *Huard*, but also often represents *Hayward*, *Hereward* and the local *Haworth*, *Howarth*. For the social elevation of the *sty-ward*, see p. 75. *Durward* is door-ward. The simple *Ward*, replaced in its general sense by *warden*, *warder*, is one of our commonest surnames. Similarly *Herd*, replaced by *herdsman*, was borne as a surname by a golfer who, if he attained not to the first three, was held more honourable than the thirty.³ The hog-herd survives as *Hoggart*; *Seward* is sometimes sow-herd; *Calvert* represents calf-herd, and *Stoddart* stot-herd, i.e., bullock-herd:—

" 'Shentlemans!' cried Andie, 'Shentlemans, ye hielant stot! If God would give ye the grace to see yersel' the way that ithers see ye, ye would throw your denner up.' " (*Catriona*, Ch. 15.)

¹ See quotation from *Henry IV.* (p. 123).

² The obsolete *hay*, hedge, is also a common surname, *Hay*, *Haig*, *Haigh*, etc.

³ Sandy Herd (d. 1943) ranked as a golfer next to the triumvirate—Vardon, Braid and Taylor.

Lambert is in some cases lamb-herd, and *Nutter* is in all probability a perversion of neat-herd, through the north-country and Scot. *nowt-herd*.

In a sense all personal names are nicknames (see p. 93), since they all give that additional information which enables us to distinguish one person from another. The practice of giving nicknames suggested by appearance, physique or habits is common to the European languages; but, on the whole, our nicknames compare very unfavourably with those of savage nations. We cannot imagine an English swain calling his lady-love "Laughing Water." From Roman times onward, European nicknames are in their general character obvious and prosaic, and very many of them are the reverse of complimentary. The most objectionable have either disappeared,¹ or the original meaning has become so obscured as to cease to give offence to the possessor. When a man had any choice in the matter, he naturally preferred not to perpetuate a grotesque name conferred on some ancestor. Medieval names were conferred on the individual, and did not become definitely hereditary till the Reformation. In later times names were sometimes changed informally. It is thus that *Bugg* became *Norfolk Howard*, a considerable transformation inspired by a natural instinct to "avoid the opinion of baseness," as Camden puts it. We no longer connect *Gosse* with *goose*, nor *Pennefather* with a miser. Cotgrave has *pinse-maille* (*pince-maille*), "a pinch-penny, scrape-good, niggard, miser, *peniefather*." In *Purcell* we lose Old Fr. *pourcel* (*pourceau*), little pig, *Fitch* no longer means a pole-cat, nor *Brock* a badger. On the other hand, we generally regard *Gosling* as a nickname, while it is more often a variant of *Jocelyn*.

Names descriptive of appearance or habits often correspond pretty closely with those that are found in French. In some cases they are probably mere translations. Examples are *Merryweather* (*Bontemps*), *Drinkwater* (*Boileau*²), *Armstrong* (*Fortinbras*), *Lillywhite* (*Blanchefleur*). Among colour names we have *Black*, *Brown*, *White*

¹ The following occur in the index to Bardsley's *English Surnames*:—Blackinthemouth, Blubber, Calvesmawe, Cleanhog, Crookbone, Damned-Barebones, Drunkard, Felon, Greenhorn, Halfpenny, Hatechrist, Hogsflesh, Killhog, Leper, Mad, Measle, Milksop, Outlaw, Peckcheese, Peppercorn, Poorfish, Pudding, Ragman, Scorchbeef, Sourale, Sparewater, Sweatinbed, Twopenny, Widchese. Some of these are still found.

² Cf. also Ital. *Bevilacqua*, Ger. *Trinkwasser*.

FAMILY NAMES

and *Grey*, but seem to miss *red*. The explanation is that for this colour we have adopted the northern form *Reid* (*Read*, *Reed*), or such French names as *Rudge* (*rouge*), *Rouse* (*roux*), *Russell* (*Rousseau*). With the last of these, Old Fr. *roussel*, cf. *Brunel* and *Morel*. Fr. *blond* has given *Blount*, *Blunt* and the diminutive *Blundell*, which exist by the side of the fine old English name *Fairfax*, from Mid. Eng. *fax*, hair. Several other French adjectives have given us surnames, e.g., *Boon* (*bon*), *Bonner* (*débonnaire*), *Grant* (*grand*), *Curtis* (*courtois*), *Power* (*pauvre*), etc. *Payn* is the French adjective *païen*, pagan, Lat. *paganus*, in early use as a personal name.

But many apparent nicknames are products of folk-etymology. *Coward* is for *cowherd*, *Salmon* for *Salomon*, *Bone* for *Boon* (v.s.), *Dedman* is a corruption of *Debenham*. *Playfair* means play-fellow, from an old word connected with the verb to *fare*, to journey. *Patch* may sometimes have meant a jester, from his parti-coloured garments, but is more often a variant of *Pash*, *Pask*, a baptismal name given to children christened at Easter, Old Fr. *Pasque* (*Pâques*). Easter eggs are still called *pash*, *pase* or *paste* eggs in the north of England. *Blood* is a Welsh name, son of *Lud*; cf. *Bevan*, *Bowen*, etc. *Coffin* is Fr. *Chauvin*, a derivative of Lat. *calvus*, bald. It has a variant *Caffyn*, the name of a famous cricketer. *Dance*, for *Dans*, is related to *Daniel* as *Wills* is to *William*. In the same way *Pearce* comes from the Fr. *Pierre*. The older form of the name *Pearce* was borne by the most famous of ploughmen, as it still is by the most famous of soapmakers. Names such as *Bull*, *Peacock*, *Greenman* are sometimes from shop or tavern signs. It is noteworthy that, as a surname, we often find the old form *Pocock*. The *Green Man*, still a common tavern-sign, represented a kind of "wild man of the woods"; cf. the Ger. sign *zum wilden Mann*.

In these remarks on surnames I have only tried to show in general terms how they come into existence, "hoping to incur no offence herein with any person, when I protest, in all sincerity, that I purpose nothing less than to wrong any whosoever" (Camden). Many names are susceptible of alternative explanations, and it requires a genealogist, and generally some imagination, to decide to which particular source a given family can be traced. The two arguments sometimes drawn from armorial bearings and mediæval Latin forms are worthless. Names existed before escutcheons and devices, and these are often mere puns, e.g., the *Onslow* family, of local origin, from *Onslow* in Shropshire, has adopted the excellent motto *festina lente*, "on slow." The

THE ROMANCE OF WORDS

famous name *Sacheverell* is latinized as *De Saltu Capellae*, of the kid's leap. This agrees with the oldest form *Sau-cheverell*, which is probably from a French place called Sault-Chevreuil du Tronchet (Manche). The fact that *Napier* of Merchiston had for his device *n'a pier*, no equal, does not make it any the less true that his ancestors were, like Perkin Warbeck's parents, "really, respectable people" (see p. 50).

Dr Brewer, in his *Dictionary of Phrase and Fable*, says of his own name—

"This name, which exists in France as Bruhière and Brugière, is not derived from the Saxon *briwan* (to brew), but the French *bruyère* (heath) and is about tantamount to the German *Plantagenet* (broom plant)."

A "German" Plantagenet should overawe even a Norfolk Howard. A more interesting identification, and a true one, is that of the name of the great engineer *Telford*, a corruption of *Telfer*, with *Taillefer*, the "iron cleaver."

A curious feature in nomenclature is the local character of some nicknames. We have an instance of this in the Notts name *Daft*¹—

"A *Daft* might have played in the Notts County Eleven in 1273 as well as in 1886." (BARDSLEY.)

The only occurrence of the name in the Hundred Rolls for the year 1273 is in the county of Notts. The quaint *Gotobed* (p. 135) has been a Cambridgeshire surname for seven centuries.

CHAPTER XIII

ETYMOLOGICAL FACT AND FICTION

ROMANCE and Germanic etymology dates from the middle of the 19th century, and is associated especially with the names of two great Germans, Friedrich Diez, who published his *Wörterbuch der romanischen Sprachen* in 1853, and Jakob Grimm, whose *Deutsches Wörterbuch* dates from 1852. These two men applied in their

¹ This word has degenerated. It is a doublet of *deft*.

respective fields of investigation the principles of comparative philology, and reduced to a science what had previously been an amusement for the learned or the ignorant.

Men have always been fascinated by word-lore. The Greeks and Romans played with etymology in a somewhat metaphysical fashion, a famous example of which is the derivation of *lucus a non lucendo*. Medieval writers delight in giving amazing information as to the origin of the words they use. Their method, which may be called learned folk-etymology, consists in attempting to resolve an unfamiliar word into elements which give a possible interpretation of its meaning. Thus Philippe de Thaün, who wrote a kind of verse encyclopaedia at the beginning of the 12th century, derives the French names of the days of the week as follows: *lundi*, day of light (*lumière*), *mardi*, day of toil or martyrdom (*martyre*), *mercredi*, day of market (*marché*), *jeudi*, day of joy (*joie*), *vendredi*, day of truth (*vérité*), *samedi*, day of sowing (*semence*). Here we perhaps have, not so much complete ignorance, as the desire to be edifying, which is characteristic of the medieval etymologists.

Playful or punning etymology also appears very early. Wace, whose *Roman de Rou* dates from about the middle of the 12th century, gives the correct origin of the word *Norman*—

“Justez (*put*) ensemble *north* et *man*
Et ensemble dites *northman*.”

But he also records the libellous theory that *Normendie* comes from *north mendie* (beggars). We cannot always say whether an early etymology is serious or not, but many theories which were undoubtedly meant for jokes have been quite innocently accepted by comparatively modern writers.¹

¹ The following “etymologies” occur, in the same list with a number which are quite correct, in a 16th-century French author, Tabourot des Accords:—

Bonnet, de *bon* et *net*, pource que l'ornement de la teste doit estre tel.
Chapeau, quasi, *eschappe eau*; aussi anciennement ne le souloit on porter que par les champs en temps de pluye.
Chemise, quasi, sur *chair mise*.
Velours, quasi, *velu ours*.
Galant, quasi, *gay allant*.
Menestrier, quasi, *meine estrier* des espousées.
Orgueil, quasi, *orde gueule*.
Noise, vient de *nois* (*noix*), qui font *noise* et bruit portées ensemble.
Parlement, pource qu'on y *parle* et *ment*!

The philologists of the Renaissance period were often very learned men, but they had no knowledge of the phonetic laws by which sound-change is governed. Nor were they aware of the existence of Vulgar Latin, which is, to a much greater extent than classical Latin, the parent of the Romance languages. Sometimes a philologist had a pet theory which the facts were made to fit. Hellenists like Henri Estienne believed in the Greek origin of the French language, and Périon even derived *maison* from the Gk. *oikon* (*oikos*, a house) by the simple method of prefixing an *m*. At other periods there have been Celtomaniacs, *i.e.*, scholars who insisted on the Celtic origin of French.

The first English etymological dictionary which aims at something like completeness is the *Guide into Tongues* of John Minsheu, published in 1617. This attempts to deal not only with English but with ten other languages. It contains a great deal of learning, much valuable information for the student of Tudor literature, and some amazing etymologies. "To *purloine*,¹ or get privily away," is, says Minsheu, "a metaphor from those that picke the fat of the *loines*." *Parmaceti*, a corruption of *spermaceti*—

"And telling me, the sovereign'st thing on earth
Was *farmaceti* for an inward bruise."

(1 *Henry IV.*, i. 3.)—

he derives from Parma, which has given its name to *parmesan* cheese. On the word *cockney*² he waxes anecdotic, always a fatal thing in an etymologist—

"*Cockney*, or *cockny*, applied only to one borne within the sound of Bow-bell, that is, within the City of London, which tearme came first out of this tale: That a cittizens sonne riding with his father out of London into the country, and being a novice and meerely ignorant how corne or cattell increased, asked, when he heard a horse *neigh*, what the horse did; his father answered, the horse doth *neigh*; riding farther he heard a cocke crow, and said, doth the *cocke neigh* too?"

Molière often makes fun of the etymologists of his time, and has

¹ Old Fr. *pourloignier*, to remove; cf. *éloigner*.

² A very difficult word. Before it was applied to a Londoner it meant a milksop. It is thus used by Chaucer. Cooper renders *delicias facere*, "to play the wanton, to dally, to play the *cockney*." In this sense it corresponds to Fr. *acoquiné*, made into a *coquin*, "made tame, inward, familiar; also, grown as lazy, sloathful, idle, as a beggar" (Cotgrave).

rather unfairly caricatured, as Vadius in *Les Femmes savantes*, the great scholar Gilles Ménage, whose etymological dictionary, published in 1650, was long a standard work. Molière's mockery and the fantastic nature of some of Ménage's etymologies have combined to make him a butt for the ignorant, but it may be doubted whether any modern scholar, using the same implements, could have done better work. For Ménage the one source of the Romance languages was classical Latin, and every word had to be traced to a Latin word of suitable form or sense. Thus Fr. *haricot*¹ is connected by him with Lat. *faba*, a bean, *via* the conjectural "forms" **fabarius*, **fabaricus*, **fabaricotus*, **faricotus*, **haricotus*, a method to which no problem is insoluble.² He suggests that Fr. *geindre*, or *gindre*,³ baker's man, comes from Lat. *gener*, son-in-law, because the baker's man always marries the baker's daughter; but this practice, common though it may be, is not of sufficiently unflinching regularity to constitute a philological law. Perhaps his greatest achievement was the derivation of Span. *alfana*,⁴ a mare, from Lat. *equus*, a horse, which inspired a well-known epigram—

"Alfana vient d'*equus*, sans doute,
Mais il faut avouer aussi
Qu'en venant de là jusqu'ici
Il a bien changé sur la route."

These examples show that respect for Ménage need not prevent his work from being a source of innocent merriment. But the above epigram loses some of its point for modern philologists, to whom equations that look equally fantastic, *e.g.*, Eng. *wheel* and Gk. *kyklos*,⁵ are matters of elementary knowledge. On the other hand, a close resemblance between words of languages that are not nearly

¹ Thought to be a Mexican word.

² "Sache que le mot *galant homme* vient d'*élégant*; prenant le *g* et l'*a* de la dernière syllabe, cela fait *ga*, et puis prenant *l*, ajoutant un *a* et les deux dernières lettres, cela fait *galant*, et puis ajoutant *homme*, cela fait *galant homme*." (Molière, *Jalousie du Barbouillé*, scène 2.)

³ Old Fr. *joindre*, Lat. *junior*.

⁴ Of Arabic origin.

⁵ That is, they are both descended from the same Indo-Germanic original. Voltaire was thus, superficially, right when he described etymology as a science in which the vowels do not count at all and the consonants very little.

related is proof presumptive, and almost positive, that the words are quite unconnected. The resemblance between Eng. *nut* and Ger. *nuss* is the resemblance of first cousins, but the resemblance of both to Lat. *nux* is accidental. Even in the case of languages that are near akin, it is not safe to jump to conclusions. The Greek cousin of Lat. *deus* is not *theos*, god, but *Zeus*, Jupiter.

An etymology that has anything to do with a person or an anecdote is to be regarded with suspicion. For both we want contemporary evidence, and, in the case of an anecdote, we never, to the best of my knowledge, get it. In Chapter III. are a number of instances of words formed according to authentic evidence from names of persons. But the old-fashioned etymologist will not be denied his little story. Thus, in explanation of *spencer* (p. 37), I find in a manual of popular information of the last century,¹ that—

“His Lordship, when Lord-licutenant of Ireland, being out a-hunting, had, in the act of leaping a fence, the misfortune to have one of the skirts of his coat torn off; upon which his lordship tore off the other, observing, that to have but one left was like a pig with one ear! Some inventive genius took the hint, and having made some of these half-coats, out of compliment to his lordship, gave them the significant cognomen of *Spencer*!”

This is what Pooh-Bah calls “corroborative detail intended to give artistic verisimilitude to a bald and unconvincing narrative.” From the same authority we learn that—

“*Hurly-burly*² is said to owe its origin to Hurleigh and Burleigh, two neighbouring families, that filled the country around them with contest and violence.”—

and that—

“The word *boh!* used to frighten children, was the name of Boh, a great general, the son of Odin, whose very appellation struck immediate panic in his enemies.”³

¹ *Pulley's Etymological Compendium*, 3rd ed., revised and improved by M. A. Thoms (1853).

² Cf. Fr. *hurluberlu*, which occurs in Rabelais, and in Rostand's *Cyrano de Bergerac*.

³ *Tit-Bits*, which honoured the *Romance of Words* with a notice, approvingly quoted these three “etymologies” as being seriously propounded by the author. This is dramatic justice.

The history of *chouse* exemplifies the same tendency. There is no doubt that it comes from a Turkish word meaning interpreter, spelt *chaus* in Hakluyt and *chiaus* by Ben Jonson. The borrowing is parallel to that of *cozen* (p. 90), interpreters having a reputation little superior to that of horse-dealers. But a century and a half after the introduction of the word, we come across a circumstantial story of a Turkish *chiaus* who swindled some London merchants of a large sum in 1609, the year before Jonson used the word in *The Alchemist*. "Corroborative detail" again. The story may be true, but there is not an atom of evidence for it, and Skinner, who suggests the correct derivation in his *Etymologicon* (1671), does not mention it. Until contemporary evidence is adduced, the story must be regarded as one of those fables which have been invented in dozens by early etymologists, and which are perpetuated in popular works of reference. It is an article of faith in Yorkshire that the coarse material called *mungo* owes its name to the inventor of the machine used in its fabrication, who, when it stuck at a first trial, exclaimed with resolution, "It *mun go*."

Many stories have been composed *après coup* to explain the American *hoodlum* and the Australian *larrikin*, which are both older than our *hooligan* (see p. 17). The origin of *hoodlum* is quite obscure. The story believed in Australia with regard to *larrikin* is that an Irish policeman, giving evidence of the arrest of a rough, explained that the accused was *a-larrikin*' (larking) in the street, and this was misunderstood by a reporter. But there appears to be not the slightest foundation for this story. The word is perhaps a diminutive of the common Irish name *Larry*, also immortalized in the stirring ballad—

"The night before *Larry* was stretched."

As I write, there is a correspondence going on in the Nottingham papers as to the origin of the nickname *Bendigo*, borne by a local bruiser and evangelist. According to one account, he was one of triplets, whom a jocular friend of the family nicknamed Shadrach, Meschach and *Abed-Nego*, the last of whom was the future celebrity. It is at any rate certain that his first challenge (*Bell's Life*, 1835) was signed "Abed-Nego of Nottingham." The rival theory is that, when he was playing in the streets and his father appeared in the offing, his companions used to warn him by crying "*Bendy go!*" This theory disregards the assertion of the

"oldest inhabitant" that the great man was never called *Bendy*, and the fact, familiar to any observer of the local dialect, that, even if he had been so called, the form of warning would have been, "Look aht, Bendy, yer daddy's a-coomen."

In the Supplement to Littré there is an article on *domino*, in which he points out that investigation must start from the phrase *faire domino* (see p. 84). He also quotes an absurd anecdote from a local magazine, which professes to come from a "vieille chronique." Littré naturally wants to know what chronicle. In Scheler's *Dictionnaire étymologique* (Brussels, 1888), it is "proved," by means of the same story elaborated, "que c'est là la véritable origine du mot dont nous parlons."

In Brewer's *Dictionary of Phrase and Fable*, s.v. *sirloin*, we read that "it is generally said that James I. or Charles II. knighted the loin of beef, but Henry VIII. had done so already." This sounds like a determination to get at the root of things, but does not go far enough. The word is found in the 15th century, and Fr. *surlonge*, from which it comes, in the 14th. It is compounded of *sur*, over, and *longe*, a derivative of Lat. *lumbus*, loin. The belief in the knightly origin of the *sirloin* was so strong that we find it playfully called the *baronet* (*Tom Jones*, iv. 10). Hence, no doubt, the name *baron* of beef for the double sirloin. *Tram* is persistently connected with a Mr *Outram*, who flourished about 1800. This is another case of intelligent anticipation, for the word is found in 1555. It means log or beam, and was probably first applied to a log-road laid across bad ground, what is called in America a "corduroy" road. On the other hand, the obvious and simple derivation of *beefeater*, i.e., a man who is in the enviable position of being sure of his daily allowance,¹ has been obscured by the invention of an imaginary Fr. **beaufetier*, waiter at the side-board. Skeat attributes the success of this myth to its inclusion in Mrs Markham's *History of England*. But the most indestructible of all these superstitions is connected with the word *cabal*. It comes from a Hebrew word meaning hidden mystery, and is found in the chief Romance languages. The word is of frequent occurrence in

¹ The following explanation, given in Miège's *French Dictionary* (1688), is perhaps not far wrong: "C'est ainsi qu'on appelle par dérision les Yeomen of the Guard dans la cour d'Angleterre, qui sont des gardes à peu près comme les cent Suisses en France. Et on leur donne ce nom-là, parce qu' à la cour ils ne vivent que de bœuf: par opposition à ces collègues d'Angleterre, où les écoliers ne mangent que du mouton."

English long before the date of Charles II.'s acrostic ministry,¹ though its modern meaning has naturally been affected by this historic connexion.

Even anecdotic etymologies accepted by the most cautious modern authorities do not always inspire complete confidence. *Martinet* is supposed to come from the name of a well-known French officer who reorganized the French infantry about 1670. But we find it used by Wycherley in 1676, about forty years before Martinet's death. Moreover, this application of the name is unknown in French, which has, however, a word *martinet* meaning a kind of cat-o'-nine-tails. In English *martinet* means the lee-line of a sail, hence, possibly, rope's end, and Wycherley applies the term to a brutal sea-captain. The most renowned of carriers is probably Hobson, of Cambridge. He was sung by Milton, and bequeathed to the town Hobson's conduit, which cleanses the Cambridge gutters. To him is also ascribed the phrase *Hobson's choice*, from his custom of refusing to let out his horses except in strict rotation. But we find a merchant venturer, living in Japan, using "*Hodgson's choice*" fourteen years before the carrier left this world and became a legendary figure—

"We are put to *Hodgson's choice* to take such privilegese as they will geve us, or else goe without." (*Correspondence of Richard Cocks*, Oct. 1617.)

The most obvious etymology needs to be proved up to the hilt, and the process is rich in surprises. *Cambridge* appears to be the *bridge* over the *Cam*. But the river's older name, which it preserves above the town, is the *Granta*, and Bede calls the town itself *Grantacester*. Camden, in his *Britannia* (trad. Holland, 1637), notes that the county was called "in the English Saxon" *Grentbrigseyre*, and comments on the double name of the river. Nor can he "easily beleeeve that *Grant* was turned into *Cam*; for this might seeme a deflexion some what too hardly streined, wherein all the letters but one are quite swallowed up." *Grantabrigge* became, by dissimulation (see p. 50), *Gantabrigge*, *Cantabrigge* (cf. *Cantab*), *Canbrigge*, and, by assimilation (see p. 49), *Cambridge*, the river being rechristened from the name of the town.

¹ An acrostic of this kind would have no point if it resulted in a meaningless word. In the same way the Old Fr. *Fauvel*, whence our *curry favour* (see p. 105), has a medieval explanation of the acrostic kind. It is supposed to be formed from the initial letters of the vices *Flatterie*, *Avarice*, *Vilenie*, *Variété*, *Envie*, *Lâcheté*.

THE ROMANCE OF WORDS

A *beggar* is not etymologically one who *begs*, or a *cadger* one who *cadges*. In each case the verb is evolved from the noun. About the year 1200 Lambert le *Bègue*, the Stammerer, is said to have founded a religious order in Belgium. The monks were called after him in medieval Latin *beghardi* and the nuns *beghinae*. The Old Fr. *begard* passed into Anglo-French with the meaning of mendicant and gave our *beggar*. From *béguine* we get *biggin*, a sort of cap—

“Sleep with it (the crown) now!
Yet not so sound, and half so deeply sweet,
As he, whose brow with homely *biggin* bound,
Snores out the watch of night.”

(2 *Henry IV.*, iv. 4.)

Cadger, or rather its Scottish form *cadgear*, a pedlar, occurs about one hundred and fifty years earlier than the verb to *cadge*. We find, noted as foreign words, in 16th-century Dutch, the words *cagie*, a basket carried on the back, and *cagiaerd*, one who carries such a basket. These must be of French origin, and come, like the obsolete Eng. *cadge*,¹ a panier, from *cage*, for the history of which see p. 89. *Cadger* is used in Scottish of an itinerant fish-merchant with his goods carried in paniers by a pony—

“Or die a *cadger* pownie’s death,
At some dyke-back.”

(BURNS, *Epistle to J. Lapraik*.)

Tobacco does not take its name from the island of Tobago, but from the native name of the tube through which the Caribs smoked it.

The traditional derivation of *vaunt* is from Fr. *vanter*, and this from a Late Lat. *vanitare*, to talk emptily, used by St Augustine. This looks very simple, but the real history of these words is most complicated. In Mid. English we regularly find *avaunt*, which comes from Old Fr. *avanter*, to put forward, from *avant*, before.

¹ There is also a word *cadge*, explained in the glossary to a book on falconry (1615) as a kind of frame on which an itinerant vendor of hawks carried his birds. But it is unrecorded in literature and labours under the suspicion of being a ghost-word. Its first occurrence, outside the dictionaries, is, I believe, in Maurice Hewlett’s *Song of Renny*—“the nominal service of a pair of gerfalcons yearly, in golden hoods, upon a golden *cadge*” (Ch. 1).

This gets mixed up during the Tudor period with another *vaunt* from Fr. *vanter*, to extol, the derivation of which can only be settled when its earliest form is ascertained. At present we find *venter* as early as *vanter*, and this would represent Lat. *venditare* (frequentative of *vendere*, to sell), to push one's goods, "to do anything before men to set forth himself and have a prayse; to *vaunt*; to crake; to brag" (Cooper).

A sound etymology must fulfil three conditions. It must not violate the recognized laws of sound-change. The development of meaning must be clearly traced. This must start from the earliest or fundamental sense of the word. It goes without saying that in modern corruptions we are sometimes faced by cases which it would be difficult to explain phonetically (see p. 109). There are, in fact, besides the general phonetic and semantic laws, a number of obscure and accidental influences at work which are not yet codified. As we have seen (p. 147), complete apparent dissimilarity of sound and sense need not prevent two words from being originally one¹; but we have to trace them both back until dissimilarity becomes first similarity and then identity.

The word *peruse* meant originally to wear out, Old Fr. *par-user*. In the 16th century it meant to sort or sift, especially herbs, and hence to scrutinize a document, etc. But between the earliest meaning and that of sifting there is a gap which no ingenuity can bridge, and, until this is done, we are not justified in regarding the modern *peruse* as identical with the earlier.²

The maxim of Jakob Grimm, "von den wörtern zu den sachen," is too often neglected. In dealing with the etymology of a word which is the name of an object or of an action, we must first find

¹ This seems to have been realized by the author of the *Etymological Compendium* (see p. 148, n. 1), who tells us that the "term *swallow* is derived from the French *hirondelle*, signifying indiscriminately voracious, literally a marshy place, that absorbs or *swallows* what comes within its vortex."

² It is much more likely that it originated as a misunderstanding of *peruse*, to survey, look through, earlier printed *peruse*. We have a similar misunderstanding in the name *Alured*, for *Alfred*, i.e. *Alfred*. The influence of spelling upon sound is, especially in the case of words which are more often read than heard, greater than is generally realized. Most English people pronounce a *z* in names like *Dalziel*, *Mackenzie*, *Menzies*, etc., whereas this *z* is really a modern printer's substitution for an old symbol which had nearly the sound of *y* (Dalyell, etc.).

out exactly what the original object looked like or how the original action was performed. The etymologist must either be an antiquary or must know where to go for sound antiquarian information. I will illustrate this by three words denoting objects used by medieval or Elizabethan fighting-men.

A fencing *foil* is sometimes vaguely referred to the verb *foil*, to baffle, with which it has no connexion. The Fr. *feuille*, leaf, is also invoked and compared with Fr. *fleuret*, a foil, the idea being that the name was given to the "button" at the point. Now the earliest *foils* and *fleurets* were not buttoned; first, because they were pointless, and secondly, because the point was not used in early fencing. It was not until gunpowder began to bring about the disuse of heavy armour that anybody ever dreamt of thrusting. The earliest fencing was hacking with sword and buckler, and the early *foil* was a rough sword-blade quite unlike the implement we now use. *Fleuret* meant in Old French a sword-blade not yet polished and hilted, and we find it used, as we do Eng. *foil*, of an apology for a sword carried by a gallant very much down at heel. As late as Cotgrave we find *floret*, "a *foile*; a sword with the *edge* rebated." Therefore *foil* is the same as Fr. *feuille*,¹ which in Old French meant sword-blade, and is still used for the blade of a saw; but the name has nothing to do with what did not adorn the tip. It is natural that Fr. *feuille* should be applied, like Eng. *leaf*, *blade*, to anything flat (*cf.* Ger. *blatt*, leaf), and we find in 16th-century Dutch the borrowed word *folie*, used in the three senses of leaf, metal plate, broadsword, which is conclusive.

We find frequent allusions in the 16th and 17th centuries to a weapon called a *petronel*, a flint-lock fire-arm intermediate in size between an arquebus and a pistol. It occurs several times in Scott—

" 'Twas then I fired my *petronel*,
And Mortham, steed and rider, fell."
(*Rokeby*, i. 19.)

On the strength of a French form *poitrinal*, it has been connected with Fr. *poitrine*, chest, and various explanations are given. The earliest is that of the famous Huguenot surgeon Ambroise Paré, who speaks of the "mousquets *poitrinals*, que l'on ne couche en joue, à cause de leur calibre gros et court, mais qui se tirent de la

¹ And therefore identical with the *foil* of *tinfoil*, *counterfoil*, etc.

poitrine." I cannot help thinking that, if the learned author had attempted this method of discharging an early firearm, his anatomical experience, wide as it was, would have been considerably enlarged. Minsheu (1617) describes a *petronell* as "a horseman's peece first used in the Pyrenean mountaines, which hanged them alwayes at their breast, readie to shoote, as they doe now at the horse's breast." This information is derived from Claude Fauchet, whose interesting *Antiquités françoises et gauloises* was published in 1579. Phillips, in his *New World of Words* (1678), tells us that this "kind of harquebusc, or horseman's peece, is so called, because it is to aim at a horse's brest, as it were *poictronal*." When we turn from fiction to fact, we find that the oldest French name was *pétrinal*, explained by Cotgrave as "a *petronell*, or horse-man's peece." It was occasionally corrupted, perhaps owing to the way in which the weapon was slung, into *poitrinal*. This corruption would be facilitated by the 16th-century pronunciation of *oi* (*peitrine*). The French word is borrowed either from Ital. *petronello*, *pietronello*, "a *petronell*" (Florio), or from Span. *pedreñal*, "a *petronall*, a horse-man's peece, ita dict. quod silice *petra* incenditur" (Minsheu, *Spanish Dictionary*, 1599). Thus Minsheu knew the true origin of the word, though he put the fiction in his later work. We find other forms in Italian and Spanish, but they all go back to Ital. *pietra*, *petra*, or Span. *piedra*, *pedra*, stone, flint. The usual Spanish word for flint is *pedernal*. Our word, as its forms shows, came direct from Italian.¹ The new weapon was named from its chief feature; cf. Ger. *flinte*, "a light gun, a hand-gun, pop-gun, arquebuss, fire-arm, fusil or fusee"² (Ludwig). The substitution of the flint-lock for the old match-lock brought about a re-naming of European fire-arms, and, as this substitution was first effected in the cavalry, *petronel* acquired the special meaning of horse-pistol. It is curious that, while we find practically all the French and Italian fire-arm names in 17th-century German, a natural result of the Thirty Years' War, *petronel* does not appear to be recorded. The reason is probably that the Germans had their own name, viz., *schnapphahn*, snap-cock, the English form of which, *snap-*

¹ It is a diminutive of some word which appears to be unrecorded (cf. Fr. *pistolet* for the obsolete *pistole*). Charles Reade, whose archaeology is very sound, makes Denys of Burgundy say, "*Petrone* nor harquebuss shall ever put down Sir Arbalet" (*Cloister and Hearth*, Ch. 24); but I can find no other authority for the word.

² *Fusee*, in this sense, occurs in *Robinson Crusoe*.

haunce, seems also to have prevailed over *petronel*. Cotgrave has *arquebuse à fusil*, "a *snapphaunce*," and explains *fusil* as "a fire-steel for a tinder-box." This is medieval Lat. *foçile*, from *focus*, fire, etc.

The most general name for a helmet up to about 1400 was *basnet*, or *bacinet*. This, as its name implies (see p. 124), was a basin-shaped steel cap worn by fighting-men of all ranks. The knights and nobles wore it *under* their great ornamental helmets.¹ The *basnet* itself was perfectly plain. About the end of the 16th century the usual English helmets were the *burgonet* and *morion*.² These were often very decorative, as may be seen by a visit to any collection of old armour. Spenser speaks of a "guilt engraven *morion*" (*Faerie Queene*, vii. 7). Between the *basnet* and these reigned the *salet* or *salade*, on which Jack Cade puns execrably—

"Wherefore, on a brick wall have I climbed into this garden, to see if I can eat grass, or pick a *sallet* another while, which is not amiss to cool a man's stomach this hot weather. And I think this word *sallet* was born to do me good, for many a time, but for a *sallet*, my brain-pan had been cleft with a brown-bill." (2 *Henry VI.*, iv. 10.)

It comes, through Fr. *salade*, from Ital. *celata*, "a scull, a helmet, a morion, a *sallat*, a headpicce" (Florio). The etymologists of the 17th century, familiar with the appearance of "guilt engraven morions," connected it with Lat. *caelare*, to engrave, and this derivation has been repeated ever since without examination. Now in the Tower of London Armoury is a large collection of *salets*, and these, with the exception of one or two late German specimens from the ornate period, are plain steel caps of the simplest form and design. The *salet* was, in fact, the *basnet* slightly modified, worn by the rank and file of 15th-century armies, and probably, like the *basnet*, worn under the knight's tilting helm. There is no Italian verb *celare*, to engrave, but there is a very common verb *celare*, to conceal. A steel cap was also called in Italian *secreta*, "a thinnr steele cap, or close skull, worne under a

¹ Over the tomb of the Black Prince in Canterbury Cathedral hangs his cumbrous tilting helmet. But the magnificent recumbent bronze effigy below represents him in his fighting kit, *basnet* on head.

² *Burgonet*, Fr. *bourguignotte*, is supposed to mean *Burgundian* helmet. The origin of *morion* is unknown, but its use by Scott in *Ivanhoe*—"I have twice or thrice noticed the glance of a *morion* from amongst the green leaves" (Ch. 40)—is an anachronism by four centuries. Both words are used vaguely as general names for helmet.

hat" (Florio), and in Old French *segrette*, "an yron skull or cap of fence" (Cotgrave). Both words are confirmed by Duez, who, in his *Italian-French Dictionary* (1660), has *secreta*, "une secrette, ou segrette, un morion, une bourguignotte, armure de teste pour les picquiers." Ergo, the *salet* belongs to Lat. *celare*, to hide, *secrete*.

We now *caulk* a ship by forcing oakum into the seams. Hence the verb to *caulk* is explained as coming from Mid. Eng. *cauken*, to tread, Old Fr. *cauquer*, *caucher*, Lat. *calcare*, from *calx*, heel. This makes the process somewhat acrobatic, although this is not, philologically, a very serious objection. But we *caulk* the ship or the seams, not the oakum. Primitive *caulking* consisted in plastering a wicker coracle with clay. The earliest *caulker* on record is Noah, who pitched¹ his ark within and without with pitch. In the Vulgate (*Genesis*, vi. 14), the *pitch* is called *bitumen* and the verb is *linere*, "to daub, besmear, etc." Next in chronological order comes the mother of Moses, who "took for him an ark of bulrushes, and daubed it with slime and with pitch" (*Exodus*, ii. 3), *bitumine ac pice* in the Vulgate. Bitumen, or mineral pitch, was regularly applied to this purpose, even by Elizabethan seamen. Failing this, anything sticky and unctuous was used, *e.g.*, clay or lime. *Lime* now means usually calcium oxide, but its original sense is anything viscous; *cf.* Ger. *leim*, glue, and our bird-*lime*. The oldest example of the verb to *caulk* is about 1500. In Mid. English we find to *lime* used instead, *e.g.*, in reference to the ark—

"Set and limed agen the flood" (c. 1250),—

and—

"*Lyme* it with cleye and pitche within and without." (Caxton, 1483.)

Our *caulk* is in mediæval Latin *calcare*, and this represents a rare Latin verb *calicare*, to plaster with lime, from *calx*, lime. Almost every language which has a nautical vocabulary uses for our *caulk* a verb related to Fr. *calfater*. This is of Spanish or Portuguese origin. The Portuguese word is *calafetar*, from *cal*, lime, and *afetar*, to put in order, trim, etc.

The readiness of lexicographers to copy from each other sometimes leads to ludicrous results. The origin of the word *curmudgeon* is quite unknown; but, when Dr. Johnson was at work on his

¹ See *pay* (p. 127). It will be found that all verbs of this nature are formed from the name of the substance applied.

dictionary, he received from an unknown correspondent the suggestion that it was a corruption of Fr. *cœur méchant*, wicked heart. Accordingly we find in his dictionary, "It is a vitious manner of pronouncing *cœur méchant*, Fr. an unknown correspondent." John Ash, LL.D., who published a very complete dictionary in 1775, gives the derivation "from the French *cœur*, unknown, and *méchant*, a correspondent," an achievement which, says Todd, "will always excite both in foreigners and natives a harmless smile!"

It is thus that "ghost-words" come into existence. Every considerable English dictionary, from Spelman's *Glossarium* (1664) onward, has the entry *abacot*, "a cap of state, wrought up into the shape of two crowns, worn formerly by English kings." This "word" will no longer appear in dictionaries, the editor of the *New English Dictionary* having laid this particular ghost.¹ *Abacot* seems to be a misprint or misunderstanding for a *bicocket*, a kind of horned head-dress. It corresponds to an Old Fr. *bicoquet* and Span. *bicoquete*, cap, the derivation of which is uncertain. Of somewhat later date is *brooch*, "a painting all in one colour," which likewise occurs in all dictionaries of the 18th and 19th centuries. This is due to Miège (*French Dict.*, 1688) misunderstanding Cotgrave. There is a Fr. *cameïeu*, a derivative of *cameo*, which has two meanings, viz., a cameo *brooch*, and a monochrome painting with a cameo effect. Miège appears to have taken the second meaning to be explanatory of the first, hence his entry—*brooch*, "camayeu, ouvrage de peinture qui n'est que d'une couleur." In Manwayring's *Seaman's Dictionary* (1644), the old word *carvel*, applied to a special build of ship, is misprinted *carnell*, and this we find persisting, not only in the compilations of such writers as Bailey, Ash, etc., but even in technical dictionaries of the 18th century "by officers who serv'd several years at sea and land." The Anglo-Saxon name for the kestrel (see p. 82) was *stangella*, stone-yeller (*cf.* nightingale), which appears later as *stonegall* and *staniel*. In the 16th century we find the curious spelling *steingall*, e.g., Cooper explains *tinnunculus* as "a kistrel, or a kastrell; a *steyngall*." In Cotgrave we find it printed *fleingall*, a form which recurs in later dictionaries of the 17th century. Hence, somewhere between Cooper and Cotgrave, an ornithologist or lexicographer must

¹ See letter by Dr Murray, afterwards Sir James Murray, in the *Athenaeum*, 4 Feb., 1884.

have misprinted *fleingall* for *steingall* by the common mistake of *fl* for *st*, and the ghost-word persists into the 18th century.

The difficulty of the etymologist's task is exemplified by the complete mystery which often enshrouds a word of comparatively recent appearance. A well-known example is the word *Huguenot*, for which fifteen different etymologies have been proposed. We first find it used in 1550, and by 1572 the French word-hunter Tabourot, generally known as des Accords, has quite a number of theories on the subject. He is worth quoting in full—

"De nostre temps ce mot de *Huguenots*, ou *Hucnots* s'est ainsi intronisé: quelque chose qu'ayent escrit quelques-uns, que ce mot vient *Gnosticis haereticis qui luminibus extinctis sacra faciebant*, selon Crinit: ou bien du Roy Hugues Capet, ou de la porte de Hugon à Tours par laquelle ils sortoient pour aller à leur presche. Lors que les pretendus Reformez implorerent l'ayde des voix des Allemans, aussi bien que de leurs armées: les Protestans estans venus parler en leur faveur, devant Monsieur le Chancelier, en grande assemblee, le premier mot que profera celui qui portoit le propos, fut, *Huc nos venimus*: Et apres estant pressé d'un reuthme (*rhyme*, cold) il ne peut passer outre; tellement que le second dit le mesme, *Huc nos venimus*. Et les courtisans presents qui n'entendoient pas telle prolation; car selon la nostre ils prononcent *Houc nos venimus*, estimerent que ce fussent quelques gens ainsi nommez: et depuis sur-nommerent ceux de la Religion pretendue reformee, *Hucnos*: en apres changeant *C* en *G*, *Hugnots*, et avec le temps on a allongé ce mot, et dit *Huguenots*. Et voylà la vraye source du mot, s'il n'y en a autre meilleure."¹

The only serious etymology is Ger. *eidgenoss*, oath companion, which agrees pretty well with the earliest recorded Swiss-French form, *eiguenot*, in Bonivard's *Chronique de Genève*.

The engineering term *culvert* first appears about 1800, and there is not the slightest clue to its origin. The victorious march of the ugly word *swank* has been one of the linguistic phenomena of recent years. There is a dialect word *swank*, to strut, which may be related to the common Scottish word *swankie*, a strapping youth—

"I am told, young *swankie*, that you are roaming the world to seek your fortune." (*Monastery*, Ch. 24.)

¹ The *Encyclopaedia Britannica* does not imitate the wise reticence of Tabourot's saving clause, but pronounces authoritatively for the *porte de Hugon* fable.

THE ROMANCE OF WORDS

But, in spite of the many conjectures, plausible or otherwise, which have been made, neither the etymology of *swank* nor its sudden inroad into the modern language are at present explained. The word *ogre*, first used by Perrault in his *Contes de Fées* (1697), has occasioned much grave and learned speculation. Perhaps the philologists of the future may theorize as sapiently as to the origin of *jabberwock* and *bandersnatch*.
